

BHUPENDRA SINGH

ADVANCED ABSTRACT ALGEBRA

A Pragati Edition

CONTENTS

PART I—PRELIMINARIES

Chapter 1. Logics and Set Theory

1-11

1. Introduction 1
2. Logical and specific terms 1
3. Primitive and defined terms 1
4. Statements 1
5. Connectives 2
6. Conjunction 3
7. Disjunction 3
8. Conditional 3
9. Bi-conditional 3
10. Joint denial 4
11. NAND statement 4
12. Types of conditional 4
13. Use of brackets 4
14. Types of sentences 4
15. Truth values and truth table 5
16. Sets and elements 8
17. Operations on sets 10
18. Power set of a set 10

Chapter 2. Relations and Functions

12-30

1. Introduction 12
2. Cartesian product of sets 12
3. Some theorems related to cartesian product of sets 13
4. Relations 16
 - Solved examples* 17
5. Types of relations 19
 - Solved examples* 20
6. Functions 25
7. Domain and range of functions 26
8. Types of mappings 26
9. Some theorems on mappings 28
 - Exercise* 29

Chapter 3. Matrices and Rank

31-48

1. Review of matrices 31
2. Submatrix of a matrix 35
3. Rank of a matrix 35
4. Elementary transformations of a matrix 36
5. Elementary matrices 37
6. Invariance of rank under E -transformation 37
7. Normal form 38
8. Equivalence of matrices 40
9. Row-transformations 40
10. Column-transformation 41
11. Rank of product of matrices 41
 - Solved examples* 42
 - Exercise* 46

PART II—GROUPS

Chapter 4. Groups

49–108

- | | | |
|--|-----|----|
| 1. Binary compositions | 49 | |
| 2. Groups | 50 | |
| 3. Abelian or commutative groups | | 51 |
| 4. Finite and infinite group | | 51 |
| <i>Solved examples</i> | 55 | |
| <i>Exercise 1</i> | 57 | |
| 5. Integral power of an element | | 58 |
| 6. Order of an element of a group | | 58 |
| <i>Solved examples</i> | 59 | |
| <i>Some important theorems</i> | | 59 |
| <i>Solved examples</i> | 62 | |
| <i>Exercise 2</i> | 64 | |
| 7. Modulo system | 65 | |
| <i>Solved examples</i> | 69 | |
| 8. Transformations, permutation and permutations group | | 70 |
| 9. Cyclic permutation | 71 | |
| 10. Even and odd permutations | | 73 |
| <i>Solved examples</i> | 76 | |
| <i>Exercise 3</i> | 77 | |
| 11. Homomorphism and isomorphism of groups | | 78 |
| <i>Solved examples</i> | 81 | |
| <i>Exercise 4</i> | | |
| 12. Subgroups of a group | 84 | |
| 13. Union and intersection of subgroups | | 90 |
| <i>Solved examples</i> | 91 | |
| 14. Cosets | 93 | |
| <i>Solved examples</i> | 100 | |
| 15. Cyclic groups | 102 | |
| <i>Solved examples</i> | 107 | |
| <i>Exercise 5</i> | 108 | |

Chapter 5. Normal Subgroups

109–130

- | | | |
|--------------------------------|-----|-----|
| 1. Normal subgroup | 109 | |
| <i>Solved examples</i> | 109 | |
| <i>Some important theorems</i> | | 110 |
| <i>Solved examples</i> | 112 | |
| <i>Exercise 1</i> | 113 | |
| 2. Conjugate element | 113 | |
| 3. Normalizer of an element | | 114 |
| 4. Quotient group | 119 | |
| <i>Solved examples</i> | 121 | |
| 5. Homomorphism of a group | | 122 |
| <i>Solved examples</i> | 129 | |
| <i>Exercise 2</i> | 129 | |

Chapter 6. Automorphism and Structure of Groups

131–157

- | | |
|-----------------------------|-----|
| 1. Automorphism of a group | 131 |
| 2. Theorems on automorphism | 131 |

3. Inner automorphism	134	
4. Theorems on inner automorphism	134	
5. External direct product of groups	137	
6. Theorems on external direct product of groups		138
7. Internal direct products	140	
8. Theorems on internal direct product of groups		141
9. Cauchy's and Sylow's theorems	144	
10. Sylow p -groups	146	
11. Finite abelian groups	148	
12. Invariants of a finite abelian groups		151
<i>Solved examples</i>	152	
<i>Exercise</i>	156	

Chapter 7. Normal Series

158–168

1. Subnormal and normal series	158	
<i>Solved examples</i>	161	
2. Composition series	162	
<i>Solved examples</i>	165	
<i>Exercise</i>	166	
3. Descending and ascending subnormal series		167

Chapter 8. Nilpotent and Solvable Groups

169–177

1. Some definitions	169	
2. Nilpotent group	169	
3. Solvable groups	170	
4. Commutative subgroup or derived subgroup		170
<i>Solved examples</i>	176	
<i>Exercise</i>	177	

PART III—RING THEORY

Chapter 9. Rings

178–236

1. Ring	178	
2. Elementary properties of a ring		179
3. Rings with and without zero divisors		180
4. Cancellation laws in a ring	180	
5. Integral domain, field and skew fields		181
6. Some important theorems	181	
<i>Solved examples</i>	184	
<i>Exercise 1</i>	195	
7. Subrings	196	
8. Some important theorems on subring		196
9. Subfield	198	
10. Characteristic of a ring	199	
11. Characteristic of a field	201	
12. Ordered integral domain	202	
13. Ordered relations in an integral domain		202
14. Some important theorems	202	
15. Polynomial rings	203	

16. Set of all polynomials over a ring	203
<i>Solved examples</i>	206
<i>Exercise 2</i>	207
17. Ideals	207
18. Homomorphism of rig	214
19. Some theorems on homomorphisms	214
20. Kernel of a ring homomorphism	215
21. Isomorphism and quotient rings	216
22. Principal ideal	219
23. Principle ideal ring	220
24. Divisibility in an integral domain	221
25. Prime ideals	223
26. Maximal ideals	225
27. Embedding of rings	227
<i>Solved examples</i>	237
<i>Exercise 3</i>	235

Chapter 10. Primary Decomposition of Ideals

237-241

1. Radical of an ideal	237
2. Primary ideals	238
3. Primary decompositions	240
<i>Solved examples</i>	240
<i>Exercise</i>	241

Chapter 11. Unique Factorization Domain and Euclidean Domains

242-258

1. Divisibility in an integral domain	242
2. Greatest common divisor	244
3. Theorems on greatest common divisor	244
4. Lowest common multiple	245
5. Theorems on lowest common multiple	246
6. Prime and composite elements of an integral domain	247
7. Unique factorization domain	247
8. Theorems on unique factorization domain	248
9. Euclidean rings	250
<i>Solved examples</i>	250
10. Property of Euclidean rings	252
<i>Exercise</i>	258

Chapter 12. Noetherian Ring

259-270

1. Noetherian ring	259
2. Some theorems	259
3. Decomposition of ideals in noetherian rings	263
<i>Solved examples</i>	267
<i>Exercise</i>	270

Chapter 13. Rings of Fraction with Ore Condition

271-283

1. Multiplicative closed set	271
<i>Solved examples</i>	279
2. Rings with ore condition	280
<i>Exercise</i>	283

PART IV—VECTOR SPACE AND MODULES**Chapter 14. Vector Spaces**

284–324

1. Vector spaces	284
2. Elementary properties of a vector space	284
3. Vector subspaces	286
4. Linear sum of two subspaces	289
5. Direct sum of vector subspace	290
<i>Solved examples</i>	291
<i>Exercise 1</i>	297
6. Linear combination of vectors	297
7. Linear dependence and independence of vectors	300
8. Basis of a vector space	301
9. Finite dimensional vector space	301
10. Dimensions of the subspace of a vector space	304
11. Cosets	309
12. Addition and multiplication of cosets	309
13. Quotient space	309
14. Isomorphisms	312
<i>Solved examples</i>	316
<i>Exercise 2</i>	323

Chapter 15. Modules

325–345

1. Modules	325
2. Submodule	326
3. Linear sum of submodules	327
4. Quotient modules	327
5. Homomorphisms and isomorphisms of modules	328
6. Kernel of homomorphism	328
7. Range of homomorphism	328
8. Direct sum of subspaces	332
9. Submodule generated by a subset of a module	333
10. Cyclic module	334
<i>Solved examples</i>	336
11. Simple and semi-simple modules	337
12. Free modules	339
<i>Solved examples</i>	343

PART V—LINEAR ALGEBRA**Chapter 16. Linear Transformations**

346–377

1. Linear transformation	346
2. Algebra of linear transformations	348
3. Linear operator	351
4. Range and null space of linear transformation	352
5. Invertible linear transformation	354
6. Non-singular linear transformations	355
7. Co-ordinate vector	357
8. Matrix representation of a linear transformation	357
9. Change of basis	361
<i>Solved examples</i>	363
<i>Exercise</i>	375

Chapter 17. Linear Functionals

- 1. Introduction 378
- 2. Linear functional 378
- 3. Dual spaces 378
- 4. Dual basis 379
- 5. Second dual space 381
- 6. Natural mapping 381
- 7. Annihilator 381
- 8. Annihilator of an annihilator 383
- Solved examples* 384
- Exercise* 390

Chapter 18. Eigenvalues and Eigenvectors, Diagonalization

- 1. Eigenvalues and eigenvector of linear transformation 392
- Solved examples* 398
- 2. Diagonalization 400
- Solved examples* 403
- Exercise* 407

Chapter 19. Canonical Forms

- 1. Similarity of matrices 409
- 2. Similarity of linear transformation 409
- 3. Invariant subspaces 411
- 4. Triangular form 412
- 5. Invariant direct-sum decomposition 415
- Solved examples* 416
- Exercise 1* 418
- 6. Nilpotent transformation 419
- Solved examples* 422
- Exercise 2* 426
- 7. Jordan canonical forms 426
- Solved examples* 428
- Exercise 3* 430
- 8. Rational canonical form 431
- Solved examples* 431
- Exercise 4* 434

PART VI-FIELD THEORY**Chapter 20. Algebraic Extensions of a Field**

- 1. Field 435
- 2. Subfield 435
- 3. Characteristic of a field 436
- Exercise 1* 436
- 4. Extension of a field 436
- 5. Degree of a field extension 437
- 6. Simple extension of a field 438
- 7. Algebraic extension of a field 438
- 8. Roots of a polynomial in an extension field 443
- 9. Algebraically closed fields 448
- Solved examples* 451
- Exercise* 457

Chapter 21. Normal and Separable Extensions of Fields

458-478

1. Root fields 458
2. Splitting field or decomposition field 458
3. Theorems on decomposition fields 458
4. Uniqueness of decomposition field 459
5. Continuation of an isomorphism mapping 460
6. F -isomorphism and F -automorphism 465
7. Normal extensions 465
8. Some theorems on normal extensions 465
9. Multiple roots 466
10. Separable and inseparable extensions 469
11. Some theorems on separability 469
12. Primitive element 471
- Solved examples* 472
- Exercise* 477

Chapter 22. Galois Theory

479-503

1. Introduction 479
2. Automorphism of fields 479
3. Fixed field of a group of automorphism 480
4. Elementary symmetric functions of the elements of a field 484
5. Normal extension 484
6. Some theorems on normal extensions 484
7. Galois group 488
8. Properties of the Galois group 488
9. Galois group of a separable polynomial 492
10. Galois group of a polynomial represented as a group of permutation of its roots 493
11. Finite fields or Galois fields 493
12. Properties of finite fields 493
13. Galois field 495
14. Structure of the multiplicative group of a finite field 495
15. Construction of a Galois fields 496
16. Construction of subfields of $GF(p^n)$ 496
- Solved examples* 496
- Exercise* 501

Chapter 23. Application of Galois Theory

504-526

1. Introduction 504
2. Solution of polynomial equations by radicals 504
3. Radicals with prime exponents 505
4. Roots of unity and cyclotomic polynomials 505
5. Norm and trace 509
6. Cyclic extension 511
7. Galois group of cyclotomic fields over the prime fields of characteristic zero 512
8. Solvability by radicals of cyclotomic fields 513
9. Solvability by radicals (fundamental theorem) 514
- Solved examples* 515
10. Construction with ruler and compass 517
- 10.1. Constructible numbers 518
- Solved examples* 521

11. Solvability of the Quintic	523	
11.1. Elementary symmetric functions of elements of a fields		523
11.2. Some results for quintic not to be solvable	524	
<i>Solved examples</i>	524	
<i>Exercise</i>	525	

PART VII—ADDITIONAL TOPICS

Chapter 24. Noetherian and Artinian Modules and Rings		527–533
1. Modules with chain conditions	527	
2. Noetherian and Artinian modules	527	
3. Uniform modules, primary modules and Noetherian—Lasker theorem		531
Chapter 25. Smith Normal form Over a PID and Rank		534–539
1. Introduction	534	
2. Row module, column module and rank		534
3. Smith normal form	534	
<i>Solved examples</i>	536	
<i>Exercise</i>	539	
Chapter 26. Finitely Generated Modules Over a PID		540–544
1. Introduction	540	
2. Some theorems	540	
Chapter 27. Groups of Small Orders		545–552
1. Introduction	545	
2. Groups of orders 1 to 5	545	
3. Groups of order 6	545	
4. Groups of order 7	546	
5. Groups of order 8	546	
6. Groups of order 9	548	
7. Groups of order 10	548	
8. Groups of order 11	549	
9. Groups of order 12	549	
10. Groups of order 13	551	
11. Groups of order 14	551	
12. Groups of order 15	552
