0. INTRODUCTION	1-3
Definition of Modern Algebra and its uses, Mathematical logic	1
1. SYMBOLS AND THEIR MEANINGS	4-5
2. BASIC CONCEPTS OF SET	6-11
Definition of set, Set of sets	6
Subset, Superset, Equality of sets, Finite set	7
Infinite set, Universal Set, Index set and Indexed sets	8
Comparability of sets	10, Solved examples (10-11).
3. BASIC SET OPERATIONS	12-16
Union, Intersection, Disjoint sets, Difference of sets	12
Complement of a set, De-Morgan's laws	14
Distributive law, ordered pair	15
Product of sets	15
4. RELATIONS AND ORDERED SETS	17-21
Relation, Equivalence relation, Equivalence classes	17
Partition of a set, Partial order. Totally ordered set	19
Upper and lower bounds	19
Domain and range	20
5. FUNCTIONS	22-30
Function, One-one and many-one map, Inverse function	22
Equal functions, Constant function, Product of functions	24
Theorems and Solved example	(25-30).
6. COUNTABILITY AND SEQUENCES	31-33
7. GROUPS	34-151
Part 1 : Groups in General	34-73
Binary operation, Algebraic Structure, Groupoid	34
Group, Finite and infinite groups	35
Order of a group, Quasi group, Loop	35
Semi-group, Monoid, trivial and non-trivial group	35
General Theorems	(37-46),
Additive group of integers modulo m	41
Multiplicative group of integers modulo m	43
A Theorem on n^{th} roots of unity	45
Composition table for finite groups. Solved Problems	(46-70)
Part 2 : Residue Classes of Set of Integers	74-80
Definition, Relation of congruence modulo n	74
Residue classes modulo n	75
Addition and multiplication of residue classes	(77-78)
Some Theorems on residue classes and Solved examples	(78-89)
Part 3 : Order of an Element of a Group	81-97
Integral powers of an element of a group	81
Order of an element	82

Torsion free group, Mixed group	84	
General theorems on order of elements	(85–88)	
Solved Problems and exercises	(88–96).	98–112
Part 4 : Isomorphism of Groups		
Isomorphism, Automorphism	98	
Homomorphism, Epimorphism, Monomorphism	98	
Properties of isomorphic groups	(100–103)	
Solved problems and exercises	(103–110).	113–124
Part 5 : Cyclic Groups		
Definition of a cyclic group	113	
Theorems on cyclic groups	(114–119)	
Solved problems and exercises	(120–124).	125–151
Part 6 : Permutation		
Transformations, Permutation	125	
Degree of permutation	125	
Identity and inverse permutations	127	
Product of two permutations	127	
Cyclic permutation, Length of a cycle	128	
Symmetric group of permutations	129	
Disjoint cycles, Multiplication of cycles	130	
Inverse of a cyclic permutation	130	
Transposition, Even and Odd permutations	131.	
Regular permutation group	132	
Alternating group of permutations	132	
Theorems related to permutations	(132–139)	
Cayley's Theorem	134	
Solved problems and exercises	(143–151).	152–285
8. SUBGROUPS		152–285
Part 1 : Algebra of Complexes of a Group		
Complex of a group, Subgroup	152	152–168
Theorems on complexes of group	(153–163)	
Solved problems and exercises	(164–168).	
Part 2 : Algebra of Cosets of a Group		
Definition of coset	169	169–194
Index of subgroup in a group	171	
Relation of congruence modulo a subgroup	171	
Theorems on subgroups	(172–180)	
Lagrange's Theorem	177	
Theorems on subgroups of cyclic groups	(181–185)	
Solved problems and exercises	(186–191).	195–198
Part 3 : Generating System of a Group		
Part 4 : Normal and Conjugate Subgroups. Quotient Groups		
Normal subgroup	199	199–238
Proper and improper normal subgroups	200	
Simple group, Hamiltonian	200	
Normalizer of an element and a set	200	
Centralizer, Centre of a group	201	
Commutator, Commutator subgroup	202	
Conjugate element, Conjugate class	202	
Conjugate subgroup. Class of subgroups conjugate to a subgroup	203	
Quotient group	205	
Theorems and solved problems related to normal subgroups	(205–213)	

Theorems and solved problems related to Normalizer	214
Centralizer and centre of a group (215–223)	
Theorems and solved problems related to quotient groups (224–228)	
Theorems and solved problems related to commutator of a group (229–233).	
Part 5 : Homomorphism and Isomorphism Theorems.	239–269
Homomorphism	239
Isomorphism. Endomorphism. Natural Homo-morphism	240
Inner and outer automorphisms	241
Kernel of a homomorphism	241
Characteristic Subgroup	242
Theorems related to homomorphism, isomorphism and automorphism (243–269)	
First Homomorphism Theorem	244
Second Homomorphism Theorem	246
Third Homomorphism Theorem	247
Second Isomorphism Theorem	249
Third Isomorphism Theorem	251
Solved Problem (259–268).	
Part 6 : Direct Products	270–285
External and internal direct product	270
Theorems on direct product (271–278)	
Solved problems (279–282)	
Double coset	281
Subgroups determined by integral power of an element	282
9. NORMAL SERIES AND COMPOSITION SERIES	286–295
Part I. Subnormal series and Normal series (286–289)	
Isomorphic Normal Series, Zassenhaus Lemma	286
Part II. Composition Series	290–295
Maximal normal subgroup, composition series	290
Jordan Holder theorem. Solved Problems	293
10. FINITE GROUPS	296–317
Definition of p -group. H -conjugate	296
Cauchy Theorem for finite abelian group	300
Cauchy Theorem for finite group	302
First Sylow Theorem	304
Second Sylow Theorem	306
Third Sylow Theorem	307
Solved Problems (308–317).	
11. RINGS	318–494
Part 1 : Rings, Integral Domains and Fields	318–358
Ring, Boolean ring, p ring	318
Divisors of zero. Integral domain. Field	319
Division ring. Characteristic of a ring	322
Modular field. Ordered integral domain	323
Elementary properties of a ring	325
Theorems on rings, integral domains and field (326–329)	
Theorems and solved problems related to characteristic (330–331)	
Solved problems related to rings, integral domains and fields (333–353)	
Exercises (354–358).	
Part 2 : Subrings, Subdomains, Subfields	359–367
Subring, Proper and improper subring	359

Subdomain, Subfield, Prime field 360
 Some Theorems (360–363)
 Solved Problems (364–366).

368–397

Part 3 : Ideal and Quotient Rings

Left and right ideals, Proper and improper ideals 368
 Unit and zero ideals, Simple ring 368
 Smallest left ideal generated by a subset 369
 Left ideal generated by an element 369
 Principal left ideal. Principal ideal 370
 Prime ideal, Maximal ideal 371
 Quotient ring 372
 Theorems related to ideals (373–381)
 Theorems related to quotient rings (382–385)
 Solved problems related to ideals (386–395).

Part 4 : Isomorphism & Homomorphism. The Field of Quotients

398–435

Homomorphism, Isomorphism 398
 Kernel of a homomorphism 399
 Direct Sum of two subrings 399
 Theorems related to field of quotients (400–408)
 Theorems related to isomorphism and homomorphism (409–425)
 Transference of ring structure 412
 Kernel of a homomorphism 414
 First Theorem on Isomorphism 414
 Second Theorem on Isomorphism 417
 Third Theorem on Isomorphism 418
 A Theorem on direct sum of two subrings 421
 The ring of endomorphisms of an abelian group 423
 Theorems related to characteristic (426–428).

Part 5 : Polynomial Rings

436–458

Polynomial over a ring, Constant polynomial 436
 Zero polynomial. Sum and product of polynomials 436
 Monic polynomial, Associates, Unit 437
 Prime polynomial G.C.D. 438
 Some Theorems 440
 Polynomials over a ring and integral domain 440
 Imbedding of R into $R[x]$ 444
 Division Algorithm 444
 Remainder Theorem, Factor Theorem 445
 Synthetic division 448
 Solved problems (450–457).

Part 6 : Factorisation of Integral Domains

459–482

Units, Associates, Proper divisor 459
 Prime element, Composite element 460
 Greatest common divisor, Lowest common multiple 460
 Euclidean Algorithm for polynomials 462
 Unique factorisation Theorem 464
 Some Theorems (461–472)
 Einstein's Theorem 472
 Solved Problems (473–480).

Part 7 : Euclidean Rings or Euclidean Domain

483–499

Euclidean ring 483
 Some Theorems (483–490)

Unique Factorisation Theorem 490
Solved Problems (491–493).

12. VECTOR SPACES 495–596

Part 1 : Vector spaces and Subspaces 495–517

External and internal compositions 495
Vector space and its example 495
Linear combination. Linear span 497
Linear sum, Internal direct sum 497
Complementary subspaces. Disjoint spaces, External direct sum 498
Quotient space 499
Elementary properties 499
Theorems related to vector spaces, subspaces and linear span (500–507)
Solved problems (508–514)
Exercises (514–517).

Part 2 : Linear Dependence of Vectors 518–532

Vector. Zero vector, Operations on vectors 518
Vectors in C^n and R^n 519
Linearly dependent and Linearly independent 520
Basic theorems regarding linear dependence of vectors (521–525)
Cauchy-Schwarz's inequality 525
Minkowski's inequality 526
Solved problems and exercise (526–532).

Part 3 : Basis and Dimension 533–551

Basis. Finitely generated spaces 534
Dimension. Co-ordinates 534
Existence Theorem 535
Replacement Theorem 536
Invariance of number of elements in a basis 537
Extension Theorem 538
Theorems related to basis and dimension (539–543)
Solved problems and exercises (544–550)

Part 4 : Linear Transformations 552–576

Linear transformation. Isomorphism 552
Kernel and range space of a linear map 554
Nullity and rank 554
Singular and non-singular transformations 555
Linear operator, Invertible operator 555
Some Theorems (555–567)
Solved Problems (568–574).

Part 5 : Linear Functionals and the Dual Space 577–596

Linear functional and its examples 577
Dual space. Dual basis 578
Reflexivity. Annihilator 581
Transpose of a linear map 581
Reflexivity. Theorems and solved examples (582–595).

13. EXTENSION FIELDS 597–642

Extension. Finite extension 597
Algebraic extension. Simple field extension 598
Splitting field 600
Algebraic closure. Algebraically closed 603
Root field 603

	Root of a polynomial of multiplicity	603
	Degree of an algebraic number	603
	Derivative of a polynomial, Separable	603
	Section 1. General Theorems on Extension field	(605-617)
	Section 2. Problems on Extension field	(617-626)
	Section 3. Theorems on Irreducible polynomials	(626-627)
	Section 4. Theorems on Roots of polynomials	(628-629)
	Kronecker's Theorem	628
	Section 5. Theorems & Problems on splitting field	(630-634)
	Section 6. Theorems & Problems on characteristic of a field	(634-637)
	Section 7. Theorems & Problems on separable extension	(637-640)
	Perfect field	638
	Section 8. Examples on degree of splitting field	(641-640)
14.	GALOIS THEORY	643-680
	Automorphism of a field	643
	Normal extension, Fixed field	643
	Elementary symmetric functions	644
	Galois group for a polynomial	644
	Conjugate elements	644
	Section 1. Theorems and Problems on Finite field and Galois field	(644-650)
	Section 2. General Theorems and theorems on fixed field	(650-656)
	Section 3. Theorems on Normal extension field	(657-663)
	Section 4. Galois group of polynomials	(664-668)
	Section 5. Constructible number	(669-674)
	Section 6. Some typical theorems	(675-680)
	Galois Fundamental Theorem	675
15.	NILPOTENT AND SOLVABLE GROUPS	681-691
16.	MODULES	692-717
	Schur's Theorem	706
17.	FREE MODULES	718-772
18.	NOETHERIAN AND ARTINIAN RINGS AND MODULES	723-740
	Section 1. Noetherian Rings	(723-729)
	Section 2. Artinian Rings	(730-733)
	Section 3. Miscellaneous Problems	(733-737)
	Hilbert's basis theorem	733
	Free Modules	735
	Noether-Lasker theorem	737
19.	CANONICAL FORMS AND NILPOTENT OPERATORS	741-767
	Similarity of matrices and linear maps	741
	Invariant subspaces	741
	Normal form, Triangular form	742
	Invariant direct sum decomposition	742
	Nilpotent transformation	743
	Trace. Some theorems	(744-747)
	Solved problems on Invariant subspaces	(748-750)
	Solved Problems on Nilpotent operators	751
	Solved Problems on Jordan canonical forms	(753-760)
	Solved Problems on rational canonical form	(761-767)
20.	SMITH FORM OVER A PRINCIPAL IDEAL DOMAIN	768-777
