Preface

iii

1. Filter

1-21

- 1.1 Definitions of terms associated with filter theory 1
- 1.2 Calculation of characteristic impedance 2
- 1.3 Calculation of propagation constant (γ) 2
- 1.4 Definition of filter 3
- 1.5 Constant-K filter 3
- 1.6 Low pass filter 3
- 1.7 High pass filter 5
- 1.8 Band pass filter 8
- 1.9 Band stop filter 10
- 1.10 m-derived section 14

2. Transmission Line

22-30

- 2.1 Primary constants of the line 22
- 2.2 Telegrapher's equations 22
- 2.3 Reflection on the line 25
- 2.4 Line distortion and its elimination 25
- 2.5 Location of fault on the line 27

3. Phase-locked Loop

31-39

- 3.1 Basic concept of PLL 31
- 3.2 Structure of PLL 31
 - 3.2.1 Phase detector 31
 - 3.2.2 Filters used in PLL 32
 - 3.2.3 Voltage-controlled oscillator 33
- 3.3 First order PLL 33
- 3.4 FM Demodulation by PLL 34
- 3.5 Conceptual mathematical model of PLL 35
- 3.6 Second order PLL 35
- 3.7 Applications of PLL 37

4. Solid-state Microwave Oscillators

40-54

- 4.1 Microwaves 40
- 4.2 Gunn diode: basic concept 40
- 4.3 RWH mechanism 41
- 4.4 Conditions for the manifestation of DNR 41
- 4.5 Mode classification criterion 42
- 4.6 Modes of operation of bulk diodes 43

- 4.7 Modes of Gunn oscillator 43
- 4.8 IMPATT diode: basic idea 44
- 4.9 Avalanche region analysis 47
- 4.10 Drift region analysis 49
- 4.11 Power-frequency limitation 50

5 Radar

55-64

- 5.1 Basic concept of radar 55
- 5.2 Structure of the pulsed radar 55
- 5.3 Range equation of pulsed radar 56
 - 5.3.1 Implications from range equation 57
 - 5.3.2 Why military aircrafts fly at very low altitudes? 58
 - 5.3.3 Duty cycle 58
 - 5.3.4 Doppler effect associated with moving targets 58
- 5.4 Moving target indicator (MTI) radar 58
- 5.5 CW radar 60
- 5.6 FM radar 61
- 5.7 Uses of radar 62

6 Light Propagation in Optical Fiber

65-79

- 6.1 Basic mechanism of light propagation 65
- 6.2 Wave propagation in step-index fiber 67
 - 6.2.1 Characteristic equation and existence of modes in step index fiber 72
 - 6.2.2 Condition for mode cut-off 74
- 6.3 Single-mode optical fiber 75
- 6.4 Chromatic dispersion and pulse spreading 76

7 Microwave Amplifiers and Oscillators

80-103

- 7.1 Klystron amplifier 80
 - 7.1.1 Structure of Klystron 80
 - 7.1.2 Principle of operation 81
 - 7.1.3 Velocity modulation of electrons 82
 - 7.1.4 Analysis 82
- 7.2 Travelling wave tube 85
 - 7.2.1 Structure of TWT 86
 - 7.2.2 Principle of operation 86
 - 7.2.3 Analysis of the TWT amplifier 87
- 7.3 Reflex Klystron 90
 - 7.3.1 Structure of reflex Klystron 90
 - 7.3.2 Principle of operation of reflex Klystron 90
 - 7.3.3 Analysis 92
 - 7.3.4 Electronic tuning 95
- 7.4 Magnetron 95
 - 7.4.1 Structure and description of magnetron 96
 - 7.4.2 Mechanism of oscillation 96
 - 7.4.3 Analysis 97

8	Theory of Metallic Waveguides	104-118
8.1	Rectangular waveguide 104	
8.1.1	Maxwell's equations for the waveguide 104	
8.1.2	Wave equation and existence of modes 105	
8.1.2.1	Transverse electric (TE) mode 106	
8.1.2.2	Cut-off frequency and dominant mode 107	
8.1.2.3	Transverse magnetic (TM) mode 108	
8.1.2.4	Non-existence of TEM mode 110	
8.2	Circular waveguide 110	
8.2.1	Maxwell's equations in cylindrical coordinates 110	
8.2.2	Wave equation 111	
8.2.3	Transverse electric (TE) mode 112	
8.2.4	Transverse magnetic (TM) mode 113	
9	Antenna	119-130
9.1	Definition 119	
9.2	Theory of half-wave dipole antenna 120	
9.2.1	Radiation resistance 122	
9.2.2	Radiation pattern 122	
9.3	Linear array of antenna 123	
9.3.1	Broadside array 124	
9.3.2	End fire array 124	
9.4	Yagi-Uda Antenna: director and reflector 125	
9.5	Horn antenna 125	
9.6	Log-periodic antenna 126	
9.7	Dish antenna 127	
10	Noise in Communication Systems	131-144
10.1	Noise in envelope detection of AM signal 131	
10.2	Synchronous detection of AM signals in presence of noise 132	
10.3	Noise in DSB-SC receiver 133	
10.4	Noise in SSB-SC system 134	
10.5	Noise in FM receiver 136	
10.5.1	Threshold in FM 139	
10.5.2	Pre-emphasis and De-emphasis 139	
11	Digital Modulation	145-154
11.1	Classification of digital modulation 145	
11.1.1	Amplitude shift keying (ASK) 145	
11.1.2	Frequency shift keying (FSK) 145	
11.1.3	Phase shift keying (PSK) 145	
11.2	Pulse code modulation (PCM) 146	
11.2.1	Sampling 146	
11.2.2	Pulse amplitude modulation (PAM) 148	
11.2.3	Quantizing 148	
11.2.4	Encoding 149	
11.3	Delta modulation 149	

- 11.4 Multiplexed Communication 150
 - 11.4.1 Time division multiplexing (TDM) 150
 - 11.4.2 Frequency division multiplexing (FDM) 151

12 Television

155-170

- 12.1 Introduction to television: iconoscope 155
- 12.2 Television camera 155
 - 12.2.1 Image orthicon 156
 - 12.2.2 Vidicon camera 156
 - 12.2.3 Plumbicon camera 157
- 12.3 TV systems and standards 157
- 12.4 Scanning 158
 - 12.4.1 Interlaced scanning 159
 - 12.4.2 Video bandwidth calculation 159
- 12.5 Blanking and synchronizing pulses 160
- 12.6 Equalizing pulses 162
- 12.7 Picture modulation 163
- 12.8 Sound modulation 163
- 12.9 Frequency allocation to TV channels 164
- 12.10 Black and white reception circuit 164
- 12.11 Basic concept of color television 166
 - 12.11.1 Color transmission 166
 - 12.11.2 Color reception 168

13 Some Advanced Experiments

171-196

- 13.1 Design of two-bit parallel adder using NAND gates 171
- 13.2 Design of a BCD adder using IC 7483 171
- 13.3 Design of 16-state binary asynchronous counter 174
- 13.4 Mod-XX counter 175
 - 13.4.1 Mod-12 counter 176
 - 13.4.2 Decade counter 177
- 13.5 Design of SISO, SIPO, PISO and PIPO shift register 177
- 13.6 Regulated power supply 179
 - 13.6.1 Series voltage regulator with transistor as the comparator 180
 - 13.6.2 Series voltage regulator with operational amplifier as the comparator 181
- 13.7 555 Timer 182
- 13.8 Programming the microprocessor 8085 184
 - 13.8.1 Addition of two single byte numbers 187
 - 13.8.2 Multiplication of two single byte numbers whose product does not exceed 255_{10} 189
 - 13.8.3 Addition of two multibyte numbers decimally 190
 - 13.8.4 Power of a single byte number whose value does not exceed FF_{16} 192
 - 13.8.5 Square wave generation by microprocessor programming 194
 - 13.8.6 Square root of a number by microprocessor programming 196
