

ANALOG ELECTRONIC CIRCUITS

D. K. KAUSHIK

DHANPAT RAI PUBLISHING COMPANY

Contents

<i>Chapter</i>	<i>Page No.</i>
<i>Preface</i>	<i>iii</i>
Chapter 1– Transducers	1–31
1.1 Classification of transducers	1
1.2 Selection criteria for transducer	3
1.3 Resistance strain gauge	3
1.4 Types of strain gauges	6
1.5 Potentiometric transducer	10
1.6 Resistance thermometer	12
1.7 Thermistor	13
1.8 Thermocouples	14
1.9 Photoelectric transducers	14
1.9.1 Vacuum photo tube	15
1.9.2 Gas filled phototubes	16
1.9.3 Photomultiplier tubes	16
1.9.4 Photo conductive cell	17
1.9.5 Photo voltaic cell	18
1.9.6 Photo junctions	19
1.10 Capacitive transducers	20
1.11 Inductive transducers	21
1.11.1 Change in self inductance with number of turns	22
1.11.2 Change in self inductance with change in permeability	22
1.11.3 Variable reluctance type transducers	22
1.11.4 Linear variable differential transducer (LVDT)	24
1.12 Piezoelectric transducer	27
1.13 Microphones	28
1.13.1 Carbon microphone	28

1.13.2 Moving coil microphone 29

1.13.3 Crystal microphone 29

1.13.4 Capacitor microphone 30

1.14 Loudspeaker 30

Chapter 2-IC Fabrication 32-61

2.1 Integrated circuit technology 32

2.2 Advantages of integrated circuits (ICs) 33

 2.2.1 Limitations of the integrated circuits 34

2.3 Basic monolithic integrated circuits 34

 2.3.1 Wafer Preparation 34

 2.3.2 Epitaxial Growth 35

 2.3.3 Masking and etching 36

 2.3.4 Diffusion of impurities 38

 2.3.5 Metallization 41

2.4 The planar technology 41

2.5 Monolithic integrated circuits technology 43

 2.5.1 p-n junction isolation 43

 2.5.2 Dielectric isolation 44

 2.5.3 V-groove isolation 45

2.6 Formation of monolithic integrated circuit components 46

 2.6.1 n-p-n transistors 46

 2.6.2 Diodes 47

 2.6.3 Resistors 49

 2.6.4 Capacitors 51

 2.6.5 p-n-p transistors 52

2.7 Monolithic junction field effect transistors 53

2.8 MOS field effect transistors 54

2.9 IC Crossovers 55

2.10 Complete integrated circuit formation 56

Chapter 3- Feedback Amplifiers 62-78

3.1 Classification of amplifiers 62

 3.1.1 Voltage amplifiers 62

 3.1.2 Current amplifiers 63

 3.1.3 Transconductance amplifiers 64

 3.1.4 Transresistance amplifiers 64

3.2 Classification of feedback 65

3.3 Feedback topologies 65

3.4	Effect of feedback on transfer gain	66
3.4.1	Transfer gain for voltage series feedback topology	66
3.4.2	Transfer gain for voltage shunt feedback topology	67
3.4.3	Transfer gain for current series feedback topology	68
3.4.4	Transfer gain for current shunt feedback topology	68
3.5	Effect of feedback on input resistance	69
3.5.1	Input resistance for voltage series feedback topology	69
3.5.2	Input resistance for current series feedback topology	70
3.5.3	Input resistance for voltage shunt feedback topology	71
3.5.4	Input resistance for current shunt feedback topology	71
3.6	Effect of feedback on output resistance	72
3.7	Practical feedback circuits	74
Chapter 4– Operational Amplifiers		79–115
4.1	The basic operational amplifier	79
4.2	The inverting amplifier	80
4.2.1	Practical inverting amplifier	81
4.3	The non-inverting amplifier	85
4.3.1	Input resistance of voltage series feedback amplifier	87
4.3.2	Output resistance of voltage series feedback amplifier	88
4.3.3	Frequency response of voltage series feedback amplifier	90
4.3.4	Stability in voltage series feedback amplifier	92
4.3.5	Distortion in voltage series feedback amplifier	94
4.4	Difference amplifier	94
4.5	Common mode rejection ratio	98
4.6	Emitter coupled differential amplifier	100
4.6.1	Emitter coupled differential amplifier using constant current bias	103
4.6.2	Use of current mirror as constant current source	105
4.7	IC 741 operational amplifier	106
Chapter 5– Applications of Operational Amplifiers		116–157
5.1	Error voltages and currents in operational amplifiers	116
5.1.1	Input bias current	116
5.1.2	Input offset current	119
5.1.3	Input offset voltage	120
5.1.4	Thermal drift	125
5.2	Applications of operational amplifiers	126
5.2.1	Sign changer	126
5.2.2	Phase shifter	126

5.3	Summing amplifier	127
5.3.1	Non-inverting summing amplifier	128
5.4	Current-to-Voltage converter	130
5.5	Voltage-to-current converter	131
5.6	D.C. voltage follower	131
5.7	A.C. coupled amplifier	132
5.7.1	A.C. voltage follower	133
5.8	Bridge amplifier	133
5.9	Integrator	135
5.9.1	Practical integrator	137
5.10	Differentiator	139
5.11	Logarithmic amplifier	141
5.12	Antilogarithmic amplifier	143
5.13	Logarithmic multiplier	144
Chapter 6- Regulated Power Supply		158-192
6.1	Voltage regulator	158
6.1.1	Percentage regulation	159
6.1.2	Classification of voltage regulators	160
6.2	Series voltage regulator	160
6.2.1	Simple series regulator circuit	161
6.2.2	Improved series regulator circuit	162
6.2.3	Feedback type of voltage regulator	163
6.3	Shunt voltage regulator	168
6.3.1	Zener diode shunt regulator	168
6.3.2	Basic transistor shunt regulator	170
6.3.3	Improved shunt regulator	170
6.4	Regulators using operational amplifiers	173
6.4.1	Series voltage regulator using operational amplifier	173
6.4.2	Modified zener biasing	175
6.4.3	Short circuit protection	177
6.5	Shunt voltage regulator using op-amp	178
6.6	Adjustable voltage regulator ICs	178
6.6.1	IC 723 voltage regulator	179
6.6.2	Three terminal adjustable voltage regulator ICs	180
6.6.3	Three terminal fixed voltage regulator ICs	181
6.7	Switch mode power supply (SMPS)	186

Chapter 7– Sinusoidal Oscillators	193–238
7.1 Principle of operation	193
7.2 Negative resistance	196
7.3 Classification of oscillators	197
7.4 R C phase shift oscillator	197
7.4.1 Transistor phase shift oscillator	199
7.4.2 Operational amplifier phase shift oscillator	202
7.5 The wien bridge oscillator	208
7.6 L-C oscillator	213
7.7 Tuned drain FET oscillator	215
7.7 Tuned collector oscillator	218
7.8 General form of resonant circuit oscillators	220
7.9 Transistor Hartley oscillator	223
7.10 Transistor Colpitt's oscillator	226
7.11 Crystal oscillator	229
Chapter 8– Multivibrators	239–275
8.1 Bistable multivibrator	239
8.2 Triggering methods of bistable multivibrator	242
8.2.1 Asymmetrical triggering	243
8.2.2 Symmetrical triggering	245
8.3 Monostable multivibrator	248
8.3.1 Collector coupled monostable multivibrator	251
8.3.2 Emitter coupled monostable multivibrator	252
8.4 Astable multivibrator	252
8.5 Comparator	255
8.6 Schmitt trigger	257
8.7 Astable multivibrator using an operational amplifier	259
8.8 Monostable multivibrator using an operational amplifier	262
8.9 Triangular waveform generator	264
8.10 Timer IC 555	267
8.10.1 Monostable operation	268
8.10.2 Astable operation	270
8.10.3 Saw tooth generator	272
8.10.4 Voltage controlled oscillator	273
Chapter 9– Active Filters	276–297
9.1 Active filters	276
9.2 First order low pass filter	277
9.3 Second order low pass filter	279

9.4	First order high pass filter	282
9.5	Second order high pass filter	283
9.6	Higher order filters	285
9.7	Band pass filters	287
9.7.1	Wide band pass filter	287
9.7.2	Narrow band pass filter	289
9.8	Band rejection filters	291
9.8.1	Wide band rejection filter	291
9.8.2	Narrow band rejection filter	292
Chapter 10– Bridge Circuits		298–319
10.1	Wheatstone bridge	298
10.1.1	Thevenin's equivalent Wheatstone bridge	299
10.1.2	Slightly unbalance Wheatstone bridge	300
10.1.3	Sources of errors in Wheatstone bridge	301
10.2	Kelvin bridge	302
10.2.1	Practical kelvin double bridge	304
10.3	A.C. bridges	305
10.4	Maxwell bridge	306
10.5	Hay bridge	307
10.6	Schering bridge	309
10.7	Wien bridge	310
10.8	Wagner ground connection	312
Chapter 11– Switching Devices and Circuits		320–335
11.1	Unijunction transistor	320
11.2	Unijunction transistor relaxation oscillator	322
11.3	Silicon controlled rectifier	323
11.4	Half wave series static switch	326
11.5	Phase control circuit	326
11.6	SCR half wave rectifier	327
11.7	SCR full wave rectifier	328
11.8	Silicon controlled switch	329
11.8	The triac	331
11.10	The diac	332
11.11	Dimmer circuit	333
