

Basic Organometallic Chemistry

Concepts, Syntheses and Applications

SECOND EDITION

B D Gupta | A J Elias

Universities Press

CONTENTS

<i>Foreword</i>	v
<i>Preface to the Second Edition</i>	vii
<i>Preface to the First Edition</i>	ix
<i>List of abbreviations</i>	xi
CHAPTER 1 INTRODUCTION	1
1.1 What is organometallic chemistry?	1
1.2 A brief history of organometallic chemistry	2
1.3 Importance of organometallic compounds	7
1.3.1 Organometallic compounds as reagents	7
1.3.2 Organometallic compounds as additives	10
1.3.3 Organometallic compounds as catalysts	14
Supplementary reading	14
CHAPTER 2 THE 18 VALENCE ELECTRON RULE	18
2.1 Introduction	18
2.2 The 18 electron rule	18
2.3 Counting of electrons and finding metal–metal bonds	19
2.4 Compliance and violation of the 18 electron rule	23
Problems and exercises	27
Supplementary reading	30
CHAPTER 3 METAL CARBONYLS	31
3.1 Structure, π -bonding and infrared spectroscopy	32
3.2 Bonding modes of CO	36
3.3 Symmetry of metal carbonyls	37
3.4 Syntheses of metal carbonyls	37
3.4.1 Direct carbonylation	38
3.4.2 Reductive carbonylation	38
3.5 Reactions of metal carbonyls	40

3.5.1	Activation of metal carbonyls	40
3.5.2	Disproportionation	41
3.5.3	Nucleophilic addition to CO	41
3.5.4	Electrophilic addition to the carbonyl oxygen	41
3.5.5	Carbonyl anions, cations and hydrides	42
3.5.6	Collman's reagent	43
3.5.7	Migratory insertion of carbonyls	43
3.5.8	Oxidative decarbonylation	44
3.5.9	Photochemical substitution	44
3.5.10	Microwave assisted substitution	45
3.6	Metal nitrosyls	45
	Problems and exercises	46
	Supplementary reading	49
CHAPTER 4	NEUTRAL SPECTATOR LIGANDS: PHOSPHINES AND N-HETEROCYCLIC CARBENES	51
4.1	Phosphines: steric and electronic parameters	51
4.2	Basicity of phosphines	53
4.3	Monodentate phosphines	55
4.4	Multidentate phosphines	56
4.5	N-Heterocyclic carbenes	58
4.5.1	Synthesis of NHCs	61
	Problems and exercises	62
	Supplementary reading	64
CHAPTER 5	ALKENES AND ALKYNES AS LIGANDS	65
5.1	Models of ethylene-metal bonding	65
5.2	Synthesis of metal-alkene complexes	68
5.3	Reactions of metal bound alkenes: The concept of Umpolung	70
5.4	Alkynes: modes of bonding to metals	71
5.5	Reactions of metal complexes of alkenes and alkynes	73
5.5.1	Pauson-Khand reaction	75
	Problems and exercises	76
	Supplementary reading	78
CHAPTER 6	CARBENES AND CARBYNES: COMPLEXES WITH METAL-CARBON DOUBLE AND TRIPLE BONDS	80
6.1	Metal carbenes	80
6.1.1	Synthesis of Fischer carbene complexes	80

6.1.2	Synthesis of Schrock carbene complexes	81
6.1.3	Tebbe's reagent	84
6.1.4	Carbenes that are intermediate between the Fischer and Schrock types	87
6.2	Metal carbynes	89
6.2.1	Synthesis of metal-carbyne complexes	90
6.2.2	Reactions of metal-carbyne complexes	91
	Problems and exercises	94
	Supplementary reading	96
CHAPTER 7	ALKYL, ARYL AND LIGANDS WITH HIGHER HAPTICITY	96
7.1	σ bonded alkyl groups as ligands	96
7.1.1	Synthesis of metal-alkyl compounds	97
7.1.2	β -Hydride elimination	98
7.1.3	σ bonded η^1 -aryl ligands	98
7.2	Cyclic and acyclic polyenyl π bonded ligands	98
7.2.1	Cyclopentadienyl (Cp^-)	100
7.2.2	Synthesis of Cp based sandwich compounds	101
7.2.3	Structure and properties of MCp_2 complexes	104
7.2.4	Ferrocene: The first metal-sandwich compound	106
7.2.5	Reactions of metal-sandwich compounds	107
7.2.6	Bent sandwich compounds	108
7.2.7	Schwartz's reagent and hydrozirconation	108
7.2.8	Chemistry of Cp^*	109
7.2.9	Chemistry of arene sandwich compounds	111
7.2.10	Allyl groups as ligands	112
7.2.11	1,3-Butadiene complexes	115
7.2.12	Cyclobutadiene complexes	117
7.2.13	Cycloheptatriene and cyclooctatetraene as ligands	118
7.3	Davies-Green-Mingos (DGM) rules	119
	Problems and exercises	122
	Supplementary reading	127
CHAPTER 8	UNIQUE REACTIONS IN ORGANOMETALLIC CHEMISTRY	127
8.1	Oxidative addition and oxidative coupling	127
8.1.1	Oxidative addition involving C-X bonds	129

8.1.2	Prelude to cyclometallation: Agostic and anagostic interactions	130
8.1.3	Oxidative addition involving C-H bonds and cyclometallation	132
8.1.4	Orthometallation	133
8.1.5	Oxidative addition involving C-C bonds	133
8.1.6	Oxidative addition of ligands with π systems (Oxidative coupling)	133
8.2	Reductive elimination	
8.2.1	Mononuclear systems	134
8.2.2	Binuclear systems	135
8.3	Migratory insertion reactions	138
8.3.1	Lewis acid acceleration	139
8.3.2	Redox acceleration	140
8.3.3	Migration versus insertion	141
8.3.4	Insertion of alkenes	141
8.3.5	β -Hydrogen elimination versus reductive elimination	144
	Problems and exercises	145
	Supplementary reading	147
CHAPTER 9	LIGAND SUBSTITUTION REACTIONS AND FLUXIONALITY IN ORGANOMETALLIC COMPOUNDS	152
9.1	Types of ligand substitution reactions	155
9.1.1	Activation entropy and activation volume	156
9.1.2	Factors affecting substitution reactions	157
9.2	Associative substitutions	159
9.2.1	Hapticity change in multidentate ligands	160
9.3	Dissociative substitutions	162
9.4	Interchange mechanisms	163
9.4.1	Associative interchange	163
9.4.2	Dissociative interchange	164
9.5	Stereochemical non-rigidity in organometallic compounds	164
9.5.1	Ring whizzing in η^1 -Cp complexes	166
9.5.2	Interchange of η^1 - and η^5 -Cp rings	168
9.5.3	Allyl complexes	168
9.5.4	Allene complexes	170

9.5.5	Scrambling of carbonyl groups in metal carbonyls	170
	Problems and exercises	173
	Supplementary reading	176
CHAPTER 10	METAL CLUSTERS	178
10.1	Introduction	178
10.2	Dinuclear clusters	179
10.2.1	A five fold bonded organometallic compound	181
10.3	Multinuclear carbonyl clusters	182
10.3.1	Low nuclearity carbonyl clusters	182
10.3.2	High nuclearity carbonyl clusters (HNCC)	183
10.3.3	Electron counting schemes for high nuclearity clusters	183
10.3.4	Capping rules	185
10.3.5	Limitations and exceptions	186
10.3.6	Polyhedral skeletal electron pair approach or Mingo's rules	187
10.3.7	Carbide clusters	190
10.4	The isolobal analogy	191
10.4.1	Clusters having interstitial main group elements	197
10.5	Synthesis of metal carbonyl clusters	198
10.6	Reactions of metal carbonyl clusters	200
	Problems and exercises	202
	Supplementary reading	205
CHAPTER 11	HOMOGENEOUS CATALYSIS USING ORGANOMETALLIC COMPOUNDS	207
11.1	Catalysis	207
11.2	Terminology in catalysis	209
11.2.1	Turnover	213
11.2.2	Turnover number (TON)	213
11.2.3	Turnover frequency (TOF) or turnover rate	214
11.3	Sequences involved in a catalysed reaction	215
11.4	Other important terminology used in catalysis	216
11.5	Asymmetric synthesis using a catalyst	217
11.6	Heterogeneous catalysis	217
11.6.1	Catalytic converters in automobiles	218

11.7 Feedstock for the chemical industry	219
Problems and exercises	220
Supplementary reading	221

CHAPTER 12 CATALYTIC HYDROGENATION OF ALKENES AND RELATED REACTIONS

12.1 Hydrogenation catalysts	222
12.1.1 Classification of hydrogenation catalysts	222
12.1.2 Catalytic cycle of Wilkinson's catalyst	224
12.1.3 Catalytic cycles of iridium and ruthenium based catalysts	225
12.1.4 Directing effects in catalytic hydrogenation	227
12.1.5 Hydrogenation by lanthanide organometallic compounds	228
12.2 Catalytic asymmetric synthesis	229
12.2.1 The first industrial catalytic asymmetric hydrogenation	229
12.2.2 The mechanism of asymmetric hydrogenation using a chiral catalyst	230
12.2.3 Asymmetric hydrogenation of ketones and isomerisation	231
12.2.4 Asymmetric hydrogen transfer	234
12.3 Hydrocyanation of alkenes	235
12.4 Hydrosilylation of alkenes	238
Problems and exercises	240
Supplementary reading	243

CHAPTER 13 HYDROFORMYLATION

13.1 Importance of hydroformylation	245
13.2 Cobalt catalysts for hydroformylation	246
13.3 Phosphine modified cobalt catalysts	248
13.4 Rhodium-phosphine catalysts	249
13.5 Factors affecting the <i>n/iso</i> ratio of hydroformylation products	250
13.6 Enantioselective hydroformylation	252
13.7 Carboalkoxylation of olefins	253
Problems and exercises	255
Supplementary reading	256

CHAPTER 14	METHANOL CARBONYLATION AND OLEFIN OXIDATION: MONSANTO, CATIVA AND WACKER PROCESSES	258
14.1	History of methanol carbonylation	258
14.2	The Monsanto process	259
14.2.1	Problems with the Monsanto process	260
14.3	Celanese process using LiI modified rhodium catalyst	260
14.4	Tennessee Eastman acetic anhydride process	261
14.5	British Petroleum's Cativa process	261
14.6	The Wacker process	263
	Problems and exercises	266
	Supplementary reading	267
CHAPTER 15	OLEFIN METATHESIS	268
15.1	Olefin metathesis as a synthetic tool	268
15.2	Well known olefin metathesis catalysts and their properties	269
15.3	Synthesis of Grubbs' and Schrock catalysts	269
15.4	Mechanism of olefin metathesis	275
15.4.1	Ring opening metathesis (ROM)	276
15.4.2	Cross metathesis (CM)	277
15.4.3	Ring closing metathesis (RCM)	278
15.4.4	Ring opening metathesis polymerisation (ROMP)	279
15.4.5	Acyclic diene metathesis polymerisation (ADMET)	281
15.4.6	Enyne metathesis (EM)	282
15.5	Comparison of catalysts	284
15.6	Metathesis of hindered olefins	286
15.7	Applications of catalytic olefin metathesis	287
15.8	Alkyne metathesis	289
	Problems and exercises	291
	Supplementary reading	294
CHAPTER 16	PALLADIUM CATALYSED C-C AND C-N CROSS COUPLING REACTIONS	297
16.1	Discovery of palladium based cross coupling reactions	297
16.2	Industrial applications of cross coupling reactions	298
16.3	The cross coupling catalyst	299

16.4	The Heck reaction	299
16.5	Suzuki–Miyaura coupling	301
16.6	Sonogashira coupling	306
16.7	Stille coupling	308
16.8	Kumada coupling	308
16.9	Negishi coupling	310
16.10	Hiyama coupling	313
16.11	Buchwald–Hartwig C–N cross coupling	313
16.12	Cross coupling reactions in aqueous media with functional group tolerance	316
16.13	Cross coupling reactions of organohalides with non-organometallic and non-heteroatom based reagents	319
	Problems and exercises	320
	Supplementary reading	323
CHAPTER 17	OLEFIN POLYMERISATION AND OLIGOMERISATION REACTIONS	327
17.1	Catalysts for olefin polymerisation	328
17.2	Types of polyethylene and polypropylene	328
17.2.1	Polyethylene	331
17.2.2	Polypropylene	332
17.3	The Ziegler–Natta catalyst	331
17.4	Site control and chain end control mechanisms	332
17.5	Metallocene based catalysts	333
17.5.1	Polypropylenes using metallocenes	334
17.5.2	The mechanism of propylene polymerisation by metallocenes	335
17.5.3	Polypropylene and stereochemistry	336
17.5.4	Stereo-block polypropylene	339
17.5.5	Constrained geometry catalysts	339
17.6	Post-metallocene catalysts	340
17.6.1	The Brookhart catalysts	340
17.6.2	Fenokishi Imin (FI) and related ligand based metal catalysts	343
17.7	Olefin oligomerisation reactions	346
17.7.1	Shell's higher olefin process	346

Problems and exercises	349
Supplementary reading	352
CHAPTER 18 FERROCENE: STRUCTURE, BONDING AND REACTIONS	354
18.1 Structure and bonding of ferrocene	354
18.2 The reactions of ferrocene and its derivatives	355
18.2.1 Basic chemical reactions of ferrocene	357
18.2.2 Reactions of acetyl ferrocene and formyl ferrocene	357
18.2.3 Lithiated ferrocenes and their reactions	360
18.2.4 (Dimethylaminomethyl)ferrocene and its methiodide salt	363
18.2.5 Ferrocene boronic acid and haloferrocenes	364
18.3 Ferrocene derivatives in asymmetric catalysis	364
18.3.1 Chirality in ferrocene derivatives	366
18.3.2 Synthesis of chiral ferrocene based compounds	367
Problems and exercises	370
Supplementary reading	373
CHAPTER 19 ORGANOMETALLIC POLYMERS	378
19.1 Polymers with organometallic moieties as pendant groups	378
19.2 Polymers with organometallic moieties in the main chain	380
19.2.1 Ferrocene based condensation polymers	380
19.2.2 Condensation polymers based on rigid rod polyynes	380
19.2.3 Polymers prepared by ring opening polymerisation process	387
19.3 Organometallic dendrimers	395
19.3.1 Synthesis of dendrimers: Divergent and convergent methods	396
Problems and exercises	403
Supplementary reading	407
CHAPTER 20 BIOORGANOMETALLIC CHEMISTRY	409
20.1 Introduction	409
20.2 Organometallic enzymes and coenzymes	410

20.2.1	Vitamin B ₁₂ coenzyme: 'Nature's most beautiful cofactor'	410
20.2.2	Nomenclature and structure	
20.2.3	Correnoid dependant enzymatic reactions	411
20.2.4	Vitamin B ₁₂ model compounds	412
20.3	Role of organometallics in heavy metal poisoning	417
20.3.1	Heavy metal toxicity: Mercury related cases	419
20.3.2	Arsenic poisoning	419
20.4	Organometallic compounds as drugs	422
20.4.1	η^6 -Aryl-ruthenium compounds as general anticancer drugs	425
20.4.2	Ferroquine as antimalarial drug	425
20.4.3	Ferrocifen as breast cancer drug	426
20.5	Organometallics as radiopharmaceuticals, tracers, ionophores and sensors	428
20.5.1	Radiopharmaceuticals	430
20.5.2	Organometallic tracers	430
20.5.3	Organometallics as ionophores	431
20.5.4	Organometallic compounds as sensors	431
	Problems and exercises	432
	Supplementary reading	434
		435
	<i>Appendix 1: Solutions to problems and exercises</i>	
	<i>Appendix 2: Quick revision questions</i>	438
	<i>Index</i>	496
