Data Communications and Computer Networks

PHI

Brijendra Singh

1.5.8	Electronic Industries Alliance (EIA) and Telecommunications Industry Association (TIA)	16
1.5.9	Advantages and Disadvantages of Standards	16
1.6	Network Architecture	17
1.7	Open Systems and OSI Model	18
1.7.1	Layers of OSI Model	18
1.8	TCP/IP Architecture	21
1.8.1	Simple Mail Transfer Protocol (SMTP)	23
1.8.2	File Transfer Protocol (FTP)	24
1.8.3	TELNET (Terminal Network)	26
1.9	Distributed Systems and Client-Server Models	26
1.9.1	Centralized Computing vs Distributed and Client-Server Systems	27
1.9.2	Three-Tier Client-Server Systems	28
1.9.3	Web-Based Application Servers and Electronic Commerce	29
	<i>Review Questions</i>	30
	<i>Further Reading</i>	31

2. Communication Media and Data Transmission

2.1	Fourier Analysis	33
2.2	Analog and Digital Data Transmission	36
2.2.1	Analog Signals	36
2.2.2	Digital Signals	38
2.2.3	Advantage of Digital Communications	40
2.3	Modulation and Demodulation	40
2.3.1	Digital to Analog Conversion	42
2.3.2	Analog to Digital Conversion	44
2.4	Transmission Media	44
2.4.1	Twisted Pair	44
2.4.2	Baseband Coaxial Cable	45
2.4.3	Broadband Coaxial Cable	46
2.4.4	Optical Fibre	47
2.5	Wireless Communications	49
2.5.1	Radio Waves	49
2.5.2	Microwaves	51
2.5.3	Infrared	52
2.6	Data Transmission Basics	53
2.7	Transmission Mode	54
2.7.1	Parallel Transmission	54
2.7.2	Serial Transmission	55
2.8	Interfacing	56
2.9	Multiplexing	59
2.9.1	Frequency Division Multiplexing (FDM)	60
2.9.2	Time Division Multiplexing (TDM)	60
2.9.3	Wavelength Division Multiplexing (WDM)	62
	<i>Review Questions</i>	62
	<i>Further Reading</i>	63

3.	Error Detection and Correction	64-77
3.1	Types of Errors	64
3.2	Error Detection	65
3.2.1	Parity Check	66
3.2.2	Longitudinal Redundancy Check	68
3.2.3	Cyclic Redundancy Check (CRC)	69
3.2.4	Checksum	71
3.3	Error Correction	72
	<i>Review Questions</i>	76
	<i>Further Reading</i>	77
4.	Data Compression	78-87
4.1	Lossless Compression Algorithms	79
4.1.1	Run-length Encoding	79
4.1.2	Differential Pulse Code Modulation	80
4.1.3	Dictionary-based Methods	80
4.2	Image Compression (JPEG)	81
4.2.1	Discrete Cosine Transform Phase	81
4.2.2	Quantization Phase	83
4.2.3	Encoding Phase	83
4.3	Video Compression (MPEG)	84
4.3.1	MPEG Standards	85
4.4	Audio Compression (MP3)	86
	<i>Review Questions</i>	87
	<i>Further Reading</i>	87
5.	Data Link Control and Protocol Concepts	88-106
5.1	Flow Control	88
5.1.1	Stop-and-Wait Flow Control	89
5.1.2	Sliding Window Flow Control	89
5.2	Error Control	91
5.2.1	Stop-and-Wait ARQ	92
5.2.2	Go-Back-N ARQ	92
5.2.3	Selective-Reject ARQ	95
5.3	Asynchronous Protocols	96
5.3.1	X-Modem	96
5.3.2	Y-Modem	97
5.3.3	Z-Modem	97
5.3.4	Blocked Asynchronous Transmission (BLAST)	97
5.4	Synchronous Protocols	97
5.4.1	Character-Oriented Protocols	97
5.4.2	Bit-Oriented Protocols	100
5.5	High-Level Data Link Control (HDLC)	101
5.5.1	Link Access Procedure Balanced (LAPB)	105
5.5.2	Link Access Procedure, D-Channel (LAPD)	105
5.5.3	Link Access Procedure, Modems (LAPM)	105
	<i>Review Questions</i>	105
	<i>Further Reading</i>	106

6. Local Area Networks

6.1	Types of Networks and Topology	108	107-
6.2	LAN Transmission Equipment	110	
6.2.1	Network Interface Card (NIC)	110	
6.2.2	Repeater	111	
6.2.3	Hub	113	
6.2.4	Bridge	114	
6.2.5	Router	115	
6.2.6	Brouter	117	
6.2.7	Switches	117	
6.2.8	Gateways	118	
6.3	LAN Installation and Performance	120	
6.4	Ethernet: IEEE Standard 802.3	120	
6.4.1	Pure Aloha	122	
6.4.2	Slotted Aloha	124	
6.4.3	Carrier Sense Multiple Access (CSMA) Protocols	125	
6.4.4	CSMA with Collision Detection (CSMA/CD)	125	
6.5	Token Bus: IEEE Standard 802.4	126	
6.6	Token Ring: IEEE Standard 802.5	127	
6.7	Fibre Distributed Data Interface (FDDI)	128	
6.8	Distributed Queue Dual Bus (DQDB): IEEE Standard 802.6	130	
6.9	LAN Operating Systems and Protocols	130	
6.10	Ethernet Technologies	132	
6.10.1	10 Base-2 Ethernet	132	
6.10.2	Base-5 Thick Technology	134	
6.10.3	10 Base-T and 100 Base-T	134	
6.10.4	Gigabit Ethernet	135	
	<i>Review Questions</i>	135	
	<i>Further Reading</i>	136	

7. Wide Area Networks

7.1	WAN Transmission Methods	137	137-1
7.1.1	Time-Division Multiple Access (TDMA)	138	
7.1.2	Frequency Division Multiple Access (FDMA)	138	
7.1.3	Statistical Multiple Access (SMA)	138	
7.1.4	Circuit Switching	139	
7.1.5	Message Switching	140	
7.1.6	Packet Switching	140	
7.2	WAN Carrier Types	142	
7.2.1	Point-to-Point	143	
7.2.2	T-Carrier	143	
7.2.3	SONET	144	
7.2.4	ISDN	145	
7.2.5	Wireless	145	
7.3	WAN Transmission Equipment	146	
7.4	WAN Design and Multicast Considerations	148	
7.5	WAN Protocols	149	
7.5.1	X.25	150	

7.5.2	Serial Line Internet Protocol (SLIP)	151	
7.5.3	Point-to-Point Protocol (PPP)	152	
	<i>Review Questions</i>	155	
	<i>Further Reading</i>	155	
8.	Integrated Services and Routing Protocols		156–176
8.1	Integrating Services	157	
8.2	ISDN Services	158	
8.3	ISDN Topology	158	
8.4	ISDN Protocols	161	
8.5	Broadband ISDN	162	
8.6	Asynchronous Transfer Mode (ATM)	163	
8.7	Principal Characteristics of ATM	166	
8.7.1	ATM Applications	170	
8.7.2	ATM Versus ISDN and PCM-TDM	171	
8.8	Frame Relay	171	
8.9	Comparison of ISDN, ATM and Frame Relay	174	
	<i>Review Questions</i>	175	
	<i>Further Reading</i>	176	
9.	Wireless LANs		177–204
9.1	Wireless LAN, Configuration and Technology	177	
9.1.1	WLAN Configuration	179	
9.1.2	WLAN Technology Consideration	182	
9.2	WLAN Applications	185	
9.3	Wireless LAN Requirements	186	
9.4	Planning for Wireless LANs	187	
9.5	Wireless LAN Architecture	189	
9.6	IEEE 802.11 Protocol Layer	191	
9.7	IEEE 802.11 Physical Layer	192	
9.8	Designing the Wireless LAN Layout	193	
9.8.1	Peer-to-Peer Versus Infrastructure Mode	193	
9.8.2	Coverage Area	194	
9.8.3	Number of Users	197	
9.8.4	Designing Peer-to-Peer WLANs	197	
9.8.5	Designing Infrastructure Mode WLAN	198	
9.9	WAP Services	201	
	<i>Review Questions</i>	204	
	<i>Further Reading</i>	204	
10.	Internetworking		205–221
10.1	Principles of Internetworking	206	
10.2	Routing Principles	207	
10.2.1	Centralized Routing	209	
10.2.2	Distributed Routing	210	
10.2.3	Static Routing	211	

- 10.2.4 Adaptive Routing 211
- 10.2.5 Dijkstra Algorithm 213
- 10.3 Internetwork Protocol (IP) 213
 - 10.3.1 IP Services 214
 - 10.3.2 Datagram 215
 - 10.3.3 Protocol Functions 216
 - 10.3.4 Internet Control Message Protocol 216
- 10.4 Shortcomings of IPv4 219
- 10.5 IP Next Generation 219
 - 10.5.1 Characterization of Features in IPv6 220
- Review Questions* 221
- Further Reading* 221

11. TCP Reliable Transport Service

- 11.1 Transport Protocols 222
- 11.2 The Service TCP Provides to Applications 224
- 11.3 End-to-End Service and Datagrams 225
- 11.4 Transmission Control Protocol 226
 - 11.4.1 TCP Implementation Policy Options 228
 - 11.4.2 How Does TCP Achieve Reliability? 230
- 11.5 User Datagram Protocol 232
- Review Questions* 233
- Further Reading* 233

12. Network Applications

- 12.1 Client-Server Model 234
 - 12.1.1 Characteristics of Clients and Servers 235
 - 12.1.2 Complex Client-Server Interactions 236
- 12.2 Domain Name System (DNS) 237
 - 12.2.1 Country Domains 238
 - 12.2.2 The DNS Client-Server Model 239
- 12.3 Telnet 239
- 12.4 File Transfer and Remote File Access 241
 - 12.4.1 File Transfer Protocol (FTP) 242
 - 12.4.2 Client-Server Interaction in FTP 243
 - 12.4.3 Trivial File Transfer Protocol (TFTP) 244
- 12.5 Electronic Mail 245
 - 12.5.1 Electronic Mailboxes and Addresses 245
 - 12.5.2 Mail Transfer 245
 - 12.5.3 How Does E-mail Work? 246
 - 12.5.4 Internet Mail Protocols 247
- 12.6 World Wide Web (www) 251
 - 12.6.1 Hypertext and Hypermedia 253
 - 12.6.2 Hypertext Transfer Protocol 254
 - 12.6.3 Universal Resource Locators 254
 - 12.6.4 How Does the www Work? 255
- Review Questions* 256
- Further Reading* 257

13. Network Management	258–273
13.1 Goal of Network Management	258
13.1.1 Performance Management	260
13.1.2 Fault Management	261
13.1.3 Configuration Management	262
13.1.4 Accounting Management	262
13.1.5 Security Management	262
13.2 Network Management Standards	263
13.3 Network Management Model	265
13.4 Infrastructure for Network Management	266
13.5 Simple Network Management Protocol (SNMP)	269
13.5.1 Review	269
13.5.2 Simple Network Management Protocol	269
13.5.3 Simple Network Management Protocol Version 2 (SNMPv2)	272
<i>Review Questions</i>	273
<i>Further Reading</i>	273
14. Network Security	274–315
14.1 Fundamental Concepts	275
14.1.1 Objectives	275
14.1.2 Assets	275
14.1.3 Threats	275
14.1.4 Vulnerability	276
14.1.5 Safeguards	277
14.1.6 Attack	277
14.2 Identification and Authentication	278
14.2.1 Proof by Knowledge	278
14.2.2 Proof by Possession	279
14.2.3 Proof by Property	279
14.3 Access Control	280
14.3.1 Identity-Based Policies	280
14.3.2 Rule-Based Policy	281
14.3.3 Security Requirements	281
14.3.4 Mandatory Access Control	281
14.3.5 Discretionary Access Control	281
14.3.6 Labelling	281
14.3.7 Auditing	281
14.3.8 Convert Channel Analysis	282
14.4 A Model for Network Security	282
14.4.1 General Vulnerabilities	284
14.4.2 Attacks on Internet Protocol	285
14.4.3 Attacks on Internet Services	285
14.5 Malicious Software	286
14.5.1 Safeguards	287
14.6 Security Services and Cryptography	287
14.6.1 Cryptosystems	288
14.6.2 Symmetric Cryptosystems	289
14.6.3 Asymmetric Cryptosystems	295

14.6.4	Security Services	298	
14.6.5	Pretty Good Privacy (PGP)	302	
14.6.6	IP Security (IP Sec)	302	
14.7	Securing Network Using Firewall	303	
14.7.1	Types of Firewalls	304	
14.7.2	Limitations of Firewalls	306	
14.8	Web Security	306	
14.8.1	Threats to the Server	307	
14.8.2	Threats to the Client	307	
14.8.3	Safeguards	307	
14.9	Intrusion Detection	307	
14.9.1	Techniques to Detect Intrusions	308	
14.10	Network Security Tools	311	
	<i>Review Questions</i>	314	
	<i>Further Reading</i>	315
