INTRODUCTION	1
Applications of Electromagnetic Field Theory	2
Differences between Circuit Theory and Electromagnetic Field Theory	4
Notation of Scalar Parameters	5
Notation of Vector Parameters	8
Small Value Representation	10
Large Value Representation	10
Frequency Ranges of TV Channels	11
Some Great Contributors to Electromagnetic Field Theory	11
1. MATHEMATICAL PRELIMINARIES	13
1.1 Fundamentals of Scalars and Vectors	14
1.2 Coordinate Systems	15
1.3 Del (∇) Operator	22
1.4 Gradient of a Scalar, V ($= \nabla V$)	22
1.5 Divergence of a Vector, \mathbf{A} ($= \nabla \cdot \mathbf{A}$)	22
1.6 Curl of a Vector ($\equiv \nabla \times \mathbf{A}$)	23
1.7 Laplacian Operator (∇^2)	25
1.8 Dirac Delta	26
1.9 Decibel and Neper Concepts	27
1.10 Complex Numbers	28
1.11 Logarithmic Series and Identities	29
1.12 Quadratic Equations	30

1.13	Cubic Equations	21
1.14	Determinants	21
1.15	Matrices	21
1.16	Factorial	21
1.17	Permutations	21
1.18	Combinations	21
1.19	Basic Series	21
1.20	Exponential Series	21
1.21	Sine and Cosine Series	21
1.22	Sinh and Cosh Series	21
1.23	Hyperbolic Functions	21
1.24	Sine, Cosine, Tan and Cot Functions	21
1.25	Some Special Functions	21
1.26	Partial Derivative	21
1.27	Some Differentiation Formulae	21
1.28	Some Useful Integration Formulae	21
1.29	Radian and Steradian	21
1.30	Integral Theorems	21
	<i>Points/Formulae to Remember</i>	21
	<i>Solved Problems</i>	21
	<i>Objective Questions</i>	21
	<i>Exercise Problems</i>	21
2.	ELECTROSTATIC FIELDS	67
2.1	Introduction	68
2.2	Applications of Electrostatic Fields	68
2.3	Different Types of Charge Distributions	68
2.4	Coulomb's Law	71
2.5	Applications of Coulomb's Law	71
2.6	Limitation of Coulomb's Law	71
2.7	Electric Field Strength due to Point Charge	71
2.8	Salient Features of Electric Intensity	78
2.9	Electric Field due to Line Charge Density	82

2.10	Electric Field Strength due to Infinite Line Charge	85
2.11	Field due to Surface Charge Density, ρ_s (C/m^2)	92
2.12	Field due to Volume Charge Density, ρ_v (C/m^3)	97
2.13	Potential	101
2.14	Potential at a Point	102
2.15	Potential Difference	105
2.16	Salient Features of Potential Difference	106
2.17	Potential Gradient	107
2.18	Salient Features of Potential Gradient	107
2.19	Equipotential Surface	108
2.20	Potential due to Electric Dipole	108
2.21	Electric Field due to Dipole	112
2.22	Electric Flux	113
2.23	Salient Features of Electric Flux	114
2.24	Faraday's Experiment to Define Flux	115
2.25	Electric Flux Density	116
2.26	Salient Features of Electric Flux Density, D	116
2.27	Gauss's Law and Applications	118
2.28	Proof of Gauss's Law (on Arbitrary Surface)	120
2.29	Gauss's Law in Point Form	121
2.30	Divergence of a Vector, Electric Flux Density	124
2.31	Applications of Gauss's Law	125
2.32	Limitations of Gauss's Law	125
2.33	Salient Features of Gauss's Law	125
2.34	Poisson's and Laplace's Equations	126
2.35	Applications of Poisson's and Laplace's Equations	127
2.36	Uniqueness Theorem	128
2.37	Boundary Conditions on E and D	133
2.38	Proof of Boundary Conditions	133
2.39	Conductors in Electric Field	136
2.40	Properties of Conductors	136
2.41	Electric Current	137
2.42	Current Densities	138

2.43	Equation of Continuity	
2.44	Relaxation Time (T_r)	
2.45	Relation between Current Density and Volume Charge Density	
2.46	Dielectric Materials in Electric Field	
2.47	Properties of Dielectric Materials	
2.48	Dipole Moment, \mathbf{p}	
2.49	Polarisation, \mathbf{P}	
2.50	Capacitance of Different Configurations	
2.51	Energy Stored in an Electrostatic Field	
2.52	Energy in a Capacitor	
	<i>Points/Formulae to Remember</i>	
	<i>Objective Questions</i>	
	<i>Multiple Choice Questions</i>	
	<i>Exercise Problems</i>	
3.	STEADY MAGNETIC FIELDS	179
3.1	Introduction	180
3.2	Applications of Magnetostatic Fields	180
3.3	Fundamentals of Steady Magnetic Fields	180
3.4	Faraday's Law of Induction	181
3.5	Magnetic Flux Density, \mathbf{B} (wb/m^2)	182
3.6	Ampere's Law for Current Element or Biot-Savart Law	185
3.7	Field due to Infinitely Long Current Element	185
3.8	Field due to a Finite Current Element	187
3.9	Ampere's Work Law or Ampere's Circuit Law	189
3.10	Differential Form of Ampere's Circuit Law	191
3.11	Stoke's Theorem	197
3.12	Force on a Moving Charge due to Electric and Magnetic Fields	198
3.13	Applications of Lorentz Force Equation	200
3.14	Force on a Current Element in a Magnetic Field	200
3.15	Ampere's Force Law	201
3.16	Boundary Conditions on \mathbf{H} and \mathbf{B}	201
3.17	Scalar Magnetic Potential	201

3.18	Vector Magnetic Potential	207
3.19	Force and Torque on a Loop or Coil	209
3.20	Materials in Magnetic Fields	211
3.21	Magnetisation in Materials	213
3.22	Inductance	217
3.23	Standard Inductance Configurations	218
3.24	Energy Density in a Magnetic Field	222
3.25	Energy Stored in an Inductor	224
3.26	Expression for Inductance, L , in Terms of Fundamental Parameters	225
3.27	Mutual Inductance	227
3.28	Comparison between Electric and Magnetic Fields/Circuits/Parameters	228
	<i>Points/Formulae to Remember</i>	231
	<i>Objective Questions</i>	234
	<i>Multiple Choice Questions</i>	237
	<i>Exercise Problems</i>	239
4.	MAXWELL'S EQUATIONS	241
4.1	Introduction	242
4.2	Equation of Continuity for Time Varying Fields	243
4.3	Maxwell's Equations for Time Varying Fields	244
4.4	Meaning of Maxwell's Equations	245
4.5	Conversion of Differential Form of Maxwell's Equation to Integral Form	246
4.6	Maxwell's Equations for Static Fields	247
4.7	Characteristics of Free Space	248
4.8	Maxwell's Equations for Free Space	248
4.9	Maxwell's Equations for Static Fields in Free Space	248
4.10	Proof of Maxwell's Equations	249
4.11	Sinusoidal Time Varying Field	251
4.12	Maxwell's Equations in Phasor Form	252
4.13	Influence of Medium on the Fields	253
4.14	Types of Media	253
4.15	Summary of Maxwell's Equations for Different Cases	263

4.16	Conditions at a Boundary Surface	264
4.17	Proof of Boundary Conditions on E , D , H and B	264
4.18	Complete Boundary Conditions in Scalar Form	264
4.19	Boundary Conditions in Vector Form	268
4.20	Time Varying Potentials	268
4.21	Retarded Potentials	270
4.22	Maxwell's Equations Approach to Relate Potentials, Fields and Their Sources ..	271
4.23	Helmholtz Theorem	272
4.24	Lorentz Gauge Condition	273
	<i>Points/Formulae to Remember</i>	273
	<i>Objective Questions</i>	276
	<i>Multiple Choice Questions</i>	278
	<i>Exercise Problems</i>	280
5.	ELECTROMAGNETIC FIELDS AND WAVES	284
5.1	Introduction	285
5.2	Applications of EM Waves	285
5.3	Wave Equations in Free Space	285
5.4	Wave Equations for a Conducting Medium	286
5.5	Uniform Plane Wave Equation	287
5.6	General Solution of Uniform Plane Wave Equation	290
5.7	Relation between E and H in Uniform Plane Wave	291
5.8	Proof of E and H of EM Wave being Perpendicular to Each Other	294
5.9	Wave Equations in Phasor Form	294
5.10	Wave Propagation in Lossless Medium	295
5.11	Propagation Characteristics of EM Waves in Free Space	296
5.12	Propagation Characteristics of EM Waves in Conducting Medium	300
5.13	Summary of Propagation Characteristics of EM Waves in a Conducting Medium	303
5.14	Conductors and Dielectrics	306
5.15	Wave Propagation Characteristics in Good Dielectrics	306
5.16	Summary of the Propagation Characteristics of EM Waves in Good Dielectrics	308
5.17	Wave Propagation Characteristics in Good Conductors	309

5.18	Summary of Characteristics of Wave Propagation in Good Conductors	310
5.19	Depth of Penetration, δ (m)	310
5.20	Polarisation of a Wave	312
5.21	Sources of Different Polarised EM Waves	314
5.22	Direction Cosines of a Vector Field	314
5.23	Wave on a Perfect Conductor—Normal Incidence	318
5.24	Waves on Dielectric—Normal Incidence	320
5.25	Oblique Incidence of a Plane Wave on a Boundary Plane	323
5.26	Oblique Incidence of Wave on Perfect Conductor	324
5.27	Oblique Incidence of a Plane Wave on Dielectric	329
5.28	Brewster Angle	333
5.29	Total Internal Reflection	334
5.30	Surface Impedance	335
5.31	Poynting Vector and Flow of Power	337
5.32	Complex Poynting Vector	341
	<i>Points/Formulae to Remember</i>	343
	<i>Objective Questions</i>	345
	<i>Multiple Choice Questions</i>	347
	<i>Exercise Problems</i>	350
6.	GUIDED WAVES	351
6.1	Introduction	352
6.2	Waves between Parallel Plates	352
6.3	Derivation of Field Equations between Parallel Plates and Propagation Parameters	352
6.4	Field Components for TE Waves ($E_z = 0$)	356
6.5	Field Components of TM Waves ($H_z = 0$)	358
6.6	Propagation Parameters of TE and TM Waves	360
6.7	Guide Wavelength	361
6.8	Transverse Electromagnetic Wave (TEM Wave)	363
6.9	Velocities of Propagation	364
6.10	Attenuation in Parallel Plate Guides	365
6.11	Wave Impedances	366

6.12	Waves in Rectangular Waveguides	385
6.13	Derivation of Field Equations in Rectangular Hollow Waveguides	385
6.14	Propagation Parameters of TE and TM Waves in Rectangular Waveguides	386
6.15	TEM Wave Does Not Exist in Hollow Waveguides	384
6.16	Excitation Methods for Different TE and TM Waves/Modes	386
6.17	Evanescent Wave or Mode	387
6.18	Wave Impedance in Waveguide	387
6.19	Power Transmitted in a Lossless Waveguide	388
6.20	Waveguide Resonators	392
6.21	Salient Features of Cavity Resonators	395
6.22	Circular Waveguides	399
6.23	Salient Features of Circular Waveguides	400
	<i>Points/Formulae to Remember</i>	404
	<i>Objective Questions</i>	406
	<i>Multiple Choice Questions</i>	410
	<i>Exercise Problems</i>	413
7.	TRANSMISSION LINES	414
7.1	Transmission Lines	415
7.2	Types of Transmission Lines	415
7.3	Applications of Transmission Lines	417
7.4	Equivalent Circuit of a Pair of Transmission Lines	417
7.5	Primary Constants	418
7.6	Transmission Line Equations	421
7.7	Input Impedance of a Transmission Line	423
7.8	Secondary Constants	425
7.9	Lossless Transmission Lines	426
7.10	Distortionless Line	427
7.11	Phase and Group Velocities	429
7.12	Loading of Lines	430
7.13	Input Impedance of Lossless Transmission Line	430
7.14	RF Lines	432

7.15	Relation between Reflection Coefficient, Load and Characteristic Impedances	433
7.16	Relation between Reflection Coefficient and Voltage Standing Wave Ratio (VSWR)	434
7.17	Lines of Different Length— $\frac{\lambda}{8}$, $\frac{\lambda}{4}$, $\frac{\lambda}{2}$ Lines	435
7.18	Losses in Transmission Lines	437
7.19	Smith Chart and Applications	450
7.20	Stubs	453
7.21	Double Stubs	460
	<i>Points/Formulae to Remember</i>	463
	<i>Objective Questions</i>	466
	<i>Multiple Choice Questions</i>	470
	<i>Exercise Problems</i>	473
8.	RADIATION AND ANTENNAS	474
8.1	General Solution of Maxwell's Equations	475
8.2	Expressions for E and H in Terms of Potentials	475
8.3	Retarded Potentials	477
8.4	Antenna Definition	478
8.5	Functions of an Antenna	478
8.6	Properties of an Antenna	479
8.7	Antenna Parameters	479
8.8	Basic Antenna Elements	482
8.9	Radiation Mechanism	483
8.10	Radiation Fields of an Alternating Current Element (or Oscillating Electric Dipole)	484
8.11	Radiated Power and Radiation Resistance of a Current Element	487
8.12	Radiation, Induction and Electrostatic Fields	489
8.13	Hertzian Dipole	491
8.14	Different Current Distributions in Linear Antennas	491
8.15	Radiation from Half Wave Dipole	492

8.16	Radiation from Quarter Wave Monopole	497
8.17	Radiation Characteristics of Dipoles	498
	<i>Points/Formulae to Remember</i>	503
	<i>Objective Questions</i>	506
	<i>Multiple Choice Questions</i>	511
	<i>Exercise Problems</i>	513
9.	ADVANCED TOPICS	514
9.1	Introduction	515
9.2	Secondary Sources of Electromagnetic Fields	515
9.3	Reciprocity in Electromagnetic Field Theory	516
9.4	Reaction Concept	517
9.5	Induction and Equivalence Theorems	517
9.6	Electromagnetic Interference and Compatibility (EMI/EMC)	519
9.7	EMI Sources	519
9.8	Effects of EMI	523
9.9	Methods to Eliminate EMI or Design Methods for EMC	524
9.10	Need for EMC Standards	527
9.11	EMC Standards	527
9.12	Advantages of EMC Standards	528
9.13	EMC Standards in Different Countries	528
9.14	Biological Effects of EMI/EMR (Electromagnetic Interference/Electromagnetic Radiation)	529
9.15	Electrostatic Discharge (ESD)	530
9.16	Origin of ESD Event	530
9.17	Electromagnetic Pulse (EMP)	531
9.18	Numerical Techniques for the Analysis of Electromagnetic Fields	532
9.19	Finite Difference Method (FDM)	533
9.20	Finite Element Method (FEM)	533
9.21	Method of Moments (MOM)	534
	<i>Solved Problems</i>	535
	<i>Points/Formulae to Remember</i>	538

Objective Questions 539
Multiple Choice Questions 543
Exercise Problems 546

OBJECTIVE QUESTIONS AND ANSWERS **547**
