

ENCYCLOPAEDIA OF
**OSCILLATIONS
AND
WAVES**

MANPAL SINGH

Contents

<i>Preface</i>	<i>vii</i>
1. Superposition of Harmonic Waves	1
Interference and Beats • Interference of Sound Waves • Interference of Two Waves • Young's Double-slit Experiment • Interference and Beats • Beats and Amplitude Modulation	
2. Electromagnetic Waves	23
Ampere's Law • Maxwell's Equations	
3. Normal Modes of Vibration	43
Coupled Oscillations	
4. Ultrasonics	55
Audible, Infrasonic and Ultrasonic Waves • Ultrasonic Waves • Bats Avoiding Obstacles	
5. Acoustic Impedance	67
Reflection and Refraction of Waves • Characteristic Impedance of a String • Acoustic Impedance	
6. Vibrations of Strings	85
Rectangular Membranes • Equation of Motion • Laws of Vibration of Strings • Melde's Experiment	

7. Waves in Dispersive and Absorptive Media Wave Velocity • Group Velocity of Gravity Waves • Group Velocity of Surface Waves • Group Velocity of Matter Waves	117
8. Velocity of Acoustic Waves Velocity of Longitudinal Waves • Velocity of Sound • Effect of Temperature • Hebb's Telephone Method	135
9. Stationary Waves Standing Waves • Waves in a Linear Bounded Medium	149
10. Wave Motion Pressure and Energy • Transverse and Longitudinal Waves • Propagation of Sound Waves • Particle Velocity in Wave Motion	165
11. Acoustics of Buildings Characteristic Features • Sabine's Reverberation Formula	203
12. Recording and Reproduction of Sound Recording of Sound on Films • Magnetic Sound Recording	219
13. Elementary Theory of Filters Electrical Wave Filters • Acoustic Filters	227
14. Fourier's Theorem Periodic Functions • Significance of Fourier's Theorem	239
15. Doppler's Effect Practical Application	269
<i>Bibliography</i>	293
<i>Index</i>	297
