

ENVIRONMENTAL GEOGRAPHY

SAVINDRA SINGH

PRAYAG PUSTAK BHAWAN

Allahabad-211002

CONTENTS

CHAPTER 1 :	ENVIRONMENTAL GEOGRAPHY	1-14
	Definition of environmental geography • scope of environmental geography • geography and ecology • environmental geography and related sciences • fundamental concepts in environmental geography	
CHAPTER 2 :	THE ENVIRONMENT	15-25
	Meaning of environment • structure and type of environment • components of environment • geography and environment • man and nature (wilderness ethics) • environment and society • environment and resources.	
CHAPTER 3 :	MAN-ENVIRONMENT RELATIONSHIPS	26-37
	Approaches to the study (environmental deterministic approach, teleological approach, possibilistic approach, economic deterministic approach and ecological approach) • environment and man • man's interactions with the environment (historical perspective- period of hunting and food gathering, period of animal domestication and pastoralism, period of plant domestication and agriculture and period of science, technology and industrialization)	
CHAPTER 4 :	ECOLOGY	38-47
	Definitions of ecology • aims and scope of ecology • subdivisions (types) of ecology • ecological concepts and principles	
CHAPTER 5 :	ECOSYSTEM	48-58
	Meaning of ecosystem • types of ecosystems • components of ecosystem • functioning of ecosystem • ecosystem productivity • stability of ecosystem	
CHAPTER 6 :	BIOSPHERE AS AN ECOSYSTEM	59-84
	System • the biosphere • biosphere as system • biosphere as an ecosystem • subsystems of biosphere • components of biosphere/ecosystem/environment - abiotic components (lithospheric components, atmospheric components and water components), biotic components (plant system, animal system and micro-organisms)	
CHAPTER 7 :	SOIL SYSTEM	85-108
	Meaning and importance • components of soil system (flora, fauna and organic matter; mineral matter; soil solution and soil atmosphere)	

• soil structure • soil profiles and horizons • soil formation (soil forming processes and factors of soil formation) • classification of soils - USDA System of soil classification, 1938 and Comprehensive soil Classification System (CSCS), 1975

- CHAPTER 8 : ECOLOGICAL PRODUCTION AND ENERGY FLOW IN THE ECOSYSTEMS** 109-122
- Sources of energy • ecological production • trophic levels, food chains and food webs • ecological pyramids (number pyramids, biomass pyramids and energy pyramids) • flow of energy
- CHAPTER 9 : CIRCULATION OF ELEMENTS IN THE ECOSYSTEM AND BIOGEOCHEMICAL CYCLES** 123-139
- The nature of elements (nutrients) • biogeochemical cycles - the hydrological cycle, the carbon cycle, the oxygen cycle, the nitrogen cycle, the phosphorous cycle and the sediment cycle
- CHAPTER 10 : THE PLANT KINGDOM** 140-168
- Classification of plants (morphological classification of plants, hierarchical classification of plants and classification based on life-form) • vegetation and plant community • vertical stratification of communities • community development - primary succession, secondary succession and climax vegetation • evolution of plants-origin of species, evolutionary history of the world plant cover • dispersal of plants (nature and factors of dispersal, dispersal of flowering plants and role of man in plant dispersal) • distribution of plants -distribution of terrestrial plants (Australian Kingdom, Cape Kingdom, Antarctic Kingdom, Palaeotropical Kingdom, Neotropical Kingdom and Boreal Kingdom) and distribution of aquatic plants
- CHAPTER 11 : THE ANIMAL KINGDOM** 169 - 194
- Classification of animals • origin and evolution of animals • dispersal of animals (types of dispersal and factors of animal dispersal) • extinction of species • world distribution of animals (controlling factors of animal distribution, world distribution of land animals and distribution of marine animals)
- CHAPTER 12 : BIOMES** 195 - 242
- Meaning of biome • biome types • tropical evergreen rainforest biome • monsoon deciduous forest biome • Savanna biome • Mediterranean biome • temperate grassland biome • boreal forest biome/temperate coniferous forest biome/taiga biome • tundra biome • marine biome
- CHAPTER 13 : MAN AND ATMOSPHERIC ENVIRONMENT** 243 - 276
- The energy systems • global radiation/heat balance and man

(mechanisms of radiation, transport of solar radiation through the atmosphere, global heat balance of the earth and the atmosphere, net radiation and energy balance, human influence on radiation balance) • creation, depletion and maintenance of ozone layer (creation of ozone layer, depletion of ozone layer - an environmental concern, factors and mechanisms of ozone depletion and creation of ozone hole, effects of ozone depletion, protection and maintenance of ozone layer) • man, greenhouse effect and climate (meaning of greenhouse effects, major sources of greenhouse gases, emissions of carbon dioxide, greenhouse effect and climate, remedial measures) • urbanization and climate (urbanization and heat island, heat island and weather phenomena • urbanization and other weather phenomena)

CHAPTER 14 : MAN AND ENVIRONMENTAL PROCESSES

277 - 295

Historical perspective • man's impacts on environmental processes, • man and hydrological processes • man and weathering and mass movement processes • man and coastal processes • man and river processes • man and periglacial processes • man and subsurface processes • man and pedological processes

CHAPTER 15 : MAN-INDUCED SOIL EROSION AND SEDIMENTATION

296-321

Facets of soil erosion • mechanics and forms of soil erosion, • factors and causes of soil erosion • regional pattern of soil erosion • conservation measures of soil erosion • sedimentation processes and global sedimentation problems • regional sedimentation problems • sedimentation and man • sedimentation and environmental problems • corrective measures of erosion and sedimentation

CHAPTER 16 : ENVIRONMENTAL DEGRADATION

322-354

Meaning of environmental degradation • environmental degradation and pollution • types of environmental degradation • processes of environmental degradation • causes of environmental problems/ degradation • religious and philosophical factors • deforestation and environmental degradation (causes of deforestation, adverse effects of deforestation on environment, conservation measures) • agricultural development and environmental degradation • population growth and environmental degradation • industrial development and environmental degradation • urbanization and environmental degradation • modern productive technology and environmental degradation

CHAPTER 17 : EXTREME EVENTS, HAZARDS AND DISASTER

355 - 413

Environmental hazards and disasters- meaning and concept • types of environmental hazards and disasters, natural hazards/ disasters

• earthquake hazard / disaster, volcanic hazards • tropical cyclones and local storms (typhoons, hurricanes and tornadoes) • flood hazards • drought hazards • extra-planetary/ terrestrial hazards • man-induced hazards • social response to hazards • natural disaster reduction and management

CHAPTER 18 : ENVIRONMENTAL POLLUTION

414 - 463

Definitions of pollution • pollutants • factors of pollution • types of pollution • air pollution (meaning and definitions of air pollution, sources and types of air pollutants, types of air pollution, air pollution in India, adverse effects of air pollution - smogs and acid rains, control of air pollution) • water pollution (definition of water pollution, sources of water pollutants, types of water pollutants, nature and types of water pollution, surface water pollution, Ganga pollution and Ganga pollution control, lake and sea water pollution, groundwater pollution) • soil pollution • solid waste pollution • noise pollution (definition, sound and noise, measurement of noise level, sources of noise pollution, types of noise pollution, noise pollution level in India, effects of noise pollution, control of noise pollution)

CHAPTER 19 : ENVIRONMENTAL PLANNING AND MANAGEMENT

464 - 517

Concept of environmental management • aspects and approaches to environmental management • ecological basis of environmental management • resource management (approaches to resource management, meaning and classification of resources) • ecological resources • management of ecological resources (survey of ecological resources, evaluation of ecological resources) • biosphere reserves, management of wildlife resources in India • environmental impact assessment (meaning and concept, methods of environmental impact assessment) • case histories (Aswan High Dam in Egypt, Trans-Alaska Pipe Line - USA, Tehri High Dam Project - U.P., India, Sardar Sarovar Project - Gujarat, India) • control of environmental degradation and pollution • major environmental programmes
