

INORGANIC CHEMISTRY

B.Sc.-III

[5th SEMESTER]

JYOTI BOOK DEPOT PVT. LTD.

CONTENTS

1. Metal-Ligand Bonding in Transition Metal Complexes	1/1 — 1/42
1.1 Introduction	1/1
1.2 Valence Bond Theory of Transition Metal Complexes	1/1
1.3 Crystal Field Theory (CFT)	1/11
1.4 Factors on Which Magnitude of Crystal Field Splitting Depends	1/24
1.5 Colour of Transition Metal Complexes	1/28
1.6 Limitations of Crystal Field Theory	1/32
1.7 Comparison of Crystal Field Theory and Valence Bond Theory	1/35
2. Thermodynamic and Kinetic Aspects of Metal Complexes	2/1 — 2/28
2.1 Introduction	2/1
2.2 Thermodynamic Stability of Complexes	2/1
2.3 Kinetic Stability of Complexes	2/5
2.4 Factors on Which Stability of Complexes Depend	2/6
2.5 Substitution Reactions in Square Planar Complexes	2/10
2.6 Rate Law for Nucleophilic Substitution in Square Planar Complexes	2/11
2.7 Trans Effect	2/14
2.8 Mechanism of Nucleophilic Substitution in Square Planar Complexes	2/17
2.9 Theories of Trans Effect	2/18
3. Magnetic Properties of Transition Metal Complexes	3/1 — 3/26
3.1 Introduction	3/1
3.2 Types of Magnetic Behaviour	3/1
3.3 Measurement of Magnetic Properties : Magnetic Moments from Magnetic Susceptibilities	3/4
3.4 Ferromagnetism and Anti-Ferromagnetism	3/11

3.5	Orbital Contribution to Magnetic Moment	3/12
3.6	Temperature Independent Paramagnetism	3/15
3.7	Magnetic Moment Data and Behaviour of First Row Transition Metal Complexes	3/16
3.8	Anomalous Magnetic Moments and Diamagnetic- Paramagnetic Equilibrium	3/19
4.	Electronic Spectra of Transition Metal Complexes	4/1 — 4/26
4.1	Introduction	4/1
4.2	Electronic Spectra of Transition Metal Complexes	4/1
4.3	Term Symbols and LS Coupling Scheme	4/2
4.4	Rules for Determining the Term Symbol According to L-S Coupling Scheme	4/5
4.5	Determination of Spectroscopic Ground State Term	4/13
4.6	Hole Formalism	4/15
4.7	Calculation of Ground State of an Atom Using L-S Coupling Scheme	4/16
4.8	Calculation of Number of Microstates	4/18
4.9	Electronic Spectra of Transition Metal Complexes	4/20
4.10	Splitting of Russell Saunders States in Octahedral and Tetrahedral Crystal Fields	4/21
4.11	Spectrochemical Series	4/23
4.12	Orgel-Energy Level Diagrams (Nature of Electronic Transitions and Spectra of Transition Metal Complexes)	4/24
