# Introduction to NUCLEAR AND PARTICLE PHYSICS

**V.K. Mittal**  
**R.C. Verma**  
**S.C. Gupta**

# Contents

<i>Preface</i> .....	<i>xiii</i>
<i>Preface to the First Edition</i> .....	<i>xv</i>
<b>1 The Nucleus</b> .....	<b>1-47</b>
1.1 Introduction	1
1.2 Historical Developments	1
1.3 Constituents of the Nucleus	3
1.3.1 Proton–Electron Hypothesis	3
1.3.2 Proton–Neutron Hypothesis	5
1.3.3 Terms Associated with the Nucleus	7
1.4 Quantitative Facts about Nucleus	8
1.4.1 Size	8
1.4.2 Mass	9
1.4.3 Density	10
1.4.4 Energy	11
1.4.5 Charge	12
1.5 Binding Energy	12
1.5.1 Mass Defect	12
1.5.2 Packing Fraction	13
1.5.3 Fusion and Fission	14
1.5.4 Binding Energy per Nucleon	14
1.6 Nuclear Angular Momentum	16
1.7 Nuclear Moments	18
1.7.1 Magnetic Dipole Moment	18
1.7.2 Electric Quadrupole Moment	20
1.8 Wave Mechanical Properties	22
1.8.1 Parity	23
1.8.2 Statistics	24
1.9 Nature of Nuclear Forces	24
1.10 Yukawa Theory of Nuclear Forces	26

1.11	Mass Spectrometry	27
1.11.1	Bainbridge Spectrograph	28
1.11.2	Bainbridge and Jordan Mass Spectrograph	30
1.12	Determination of Charge by Moseley Law	31
	<i>Numerical Problems</i>	32
	<i>Review Questions</i>	44

## 2 Nuclear Models ..... 48-81

2.1	Introduction	48
2.2	Liquid Drop Model	49
2.2.1	Semiempirical Mass Formula	49
2.2.2	Mass of Most Stable Isobar	53
2.2.3	Achievements of Liquid Drop Model	54
2.2.4	Failures of Liquid Drop Model	54
2.3	Shell Model	54
2.3.1	The Square Well Potential	58
2.3.2	The Harmonic Oscillator Potential	61
2.3.3	Spin-Orbit Coupling	63
2.3.4	Predictions of the Shell Model	64
2.3.5	Achievements of the Shell Model	66
2.3.6	Failures of Shell Model	67
*2.4	Fermi Gas Model	67
2.5	Collective Model	69
	<i>Numerical Problems</i>	69
	<i>Review Questions</i>	79

## 3 Radioactivity ..... 82-165

3.1	Introduction	82
3.2	Laws of Disintegration	84
3.2.1	Activity and its Units	85
3.2.2	Half-life	86
3.2.3	Average (Mean) Life	87
3.3	Radioactive Series	88
3.4	Law of Successive Disintegration	90
3.4.1	Radioactive Equilibrium	93
3.5	Alpha Emission	97
3.5.1	Properties of Alpha Particles	99
3.5.2	Alpha Spectrum	99
3.5.3	Range of Alpha Particles	101
3.5.4	Geiger-Nuttal Law	102
3.5.5	Gamow Theory of Alpha Decay	103
3.6	Beta Decay	110
3.6.1	Conditions for Spontaneous Emission of $\beta^-$ -Particles	111
3.6.2	Conditions for Spontaneous Emission of $\beta^+$ -Particles	112
3.6.3	Beta-Particle Spectrum	112
3.6.4	Electron Capture	115

	3.6.5	Neutrino ( $\nu$ ) and Antineutrino ( $\bar{\nu}$ )	113
	3.6.6	Detection of Antineutrino ( $\bar{\nu}$ )	116
	3.6.7	Detection of Neutrino ( $\nu$ )	117
3.7		Gamma Decay	117
	3.7.1	Gamma Decay	117
	3.7.2	Internal Conversion	119
	3.7.3	Internal Pair Conversion	120
3.8		Artificial or Induced Radioactivity	121
*3.9		Applications of Radioactivity	123
	3.9.1	Medicine	123
	3.9.2	Food and Agriculture	124
	3.9.3	Insect Control	124
	3.9.4	Reactors	124
	3.9.5	Research Reactors	126
	3.9.6	Geology and Element Identification	127
	3.9.7	Radioactive Dating	127
	3.9.8	Radioactive Tracers	129
	3.9.9	Neutron Activation Analysis (NAA)	130
	3.9.10	In Space Flights	131
	3.9.11	In Sea	131
		Numerical Problems	132
		Review Questions	162

## 4 Nuclear Reactions ..... 166–219

4.1	Introduction	166	
4.2	Types of Nuclear Reactions	168	
	4.2.1	Reactions Based on the Reaction Mechanism	168
	4.2.2	Reactions Based on the Mass of Projectile	170
4.3	Nuclear Reaction Cross-section	175	
	4.3.1	Measurement of Cross-section	175
	4.3.2	Units of Cross-section	176
	4.3.3	Different Types of Cross-sections	177
4.4	Conservation Laws in Nuclear Reactions	177	
	4.4.1	Conservation of Mass-Energy	178
	4.4.2	Conservation of Linear Momentum	178
	4.4.3	Conservation of Charge/Atomic Number	178
	4.4.4	Conservation of Nucleons/Mass Number	178
	4.4.5	Conservation of Angular Momentum	179
	4.4.6	Conservation of Spin	179
	4.4.7	Conservation of Statistics	179
	4.4.8	Conservation of Parity	179
	4.4.9	Conservation of Lepton Number	179
4.5	Kinematics of Nuclear Reactions	180	
	4.5.1	Exoergic or Exothermic Reactions	182
	4.5.2	Endoergic or Endothermic Reactions	183
	4.5.3	Threshold Energy	183

4.6	Compound Nucleus	184	
*4.7	Nuclear Fission	185	
	4.7.1 Neutron-induced Fission	185	
	4.7.2 Energy Released in Fission	187	
*4.8	Nuclear Fusion	188	
	4.8.1 Energy Released in Fusion	189	
	4.8.2 Hydrogen Burning and Solar Energy	190	
	4.8.3 Helium Burning in Stars	191	
	<i>Numerical Problems</i>	192	
	<i>Review Questions</i>	218	
<b>5</b>	<b>Interaction of Radiations with Matter</b> .....		<b>220–261</b>
5.1	Introduction	220	
5.2	Energy Loss by Heavy Charged Particles	220	
5.3	Interaction of Electrons with Matter	225	
5.4	Range of Charged Particles	227	
5.5	Interaction of Gamma Rays with Matter	228	
	5.5.1 Radiation length	230	
	5.5.2 Half-thickness	230	
	5.5.3 Experimental Determination of Attenuation Coefficient	230	
5.6	Photoelectric Effect	232	
	5.6.1 Experimental Verification of Photoelectric Effect	234	
5.7	Compton Effect	236	
	5.7.1 Experimental Verification of Compton Effect	239	
5.8	Pair Production	241	
	5.8.1 Positron Annihilation	242	
	<i>Numerical Problems</i>	243	
	<i>Review Questions</i>	259	
<b>6</b>	<b>Particle Accelerators</b> .....		<b>262–304</b>
6.1	Introduction	262	
6.2	Cockcroft and Walton Accelerator	263	
	6.2.1 Principle	263	
	6.2.2 Construction	263	
	6.2.3 Working	264	
	6.2.4 Advantages	264	
	6.2.5 Limitations	264	
6.3	Van de Graaff Accelerator	265	
	6.3.1 Principle	265	
	6.3.2 Construction	265	
	6.3.3 Working	266	
	6.3.4 Advantages	266	
	6.3.5 Limitations	267	
6.4	Tandem Accelerator	267	
	6.4.1 Principle	267	
	6.4.2 Construction and Working	267	

6.4.3	Advantages	268	
6.4.4	Limitations	268	
6.5	Linear Accelerator (LINAC) or Drift Tube Accelerator	269	
6.5.1	Principle	269	
6.5.2	Construction	269	
6.5.3	Working	270	
6.5.4	Advantages	271	
6.5.5	Limitations	272	
6.6	Wave-Guide Accelerators	272	
6.7	Magnetic Resonance Accelerators or Cyclotrons	272	
6.7.1	Principle	273	
6.7.2	Construction	273	
6.7.3	Working	274	
6.7.4	Theory	274	
6.7.5	Advantages	276	
6.7.6	Limitations	276	
6.8	Betatron	277	
6.8.1	Principle	277	
6.8.2	Construction	277	
6.8.3	Working	278	
6.8.4	Average Energy per Orbit	279	
6.8.5	Calculation of Final Energy of Electrons	279	
*6.9	Synchrocyclotrons or Frequency Modulated Cyclotrons	281	
6.9.1	Principle	281	
6.9.2	Construction	281	
6.9.3	Theory	282	
6.9.4	Advantages	283	
6.9.5	Limitation	283	
*6.10	Azimuthally Varying Field (A.V.F.) or Sector Focusing Cyclotrons	283	
6.10.1	Principle	283	
6.10.2	Construction	284	
6.11	Synchrotrons	285	
6.11.1	Proton Synchrotron	285	
6.11.2	Accelerators in India	288	
	<i>Numerical Problems</i>	290	
	<i>Review Questions</i>	304	

## 7 Radiation Detectors ..... 305–358

7.1	Introduction	305
7.2	Gas-Filled Detectors	306
7.2.1	Principle	307
7.2.2	Construction and Working	307
7.2.3	Concept of Average Energy Required for Creating Electron–Ion Pair ( $W$ -value)	308
7.3	Ionization Chamber	310
7.3.1	Principle	310

	7.3.2	Construction	310
	7.3.3	Working	311
	7.3.4	Main Uses	311
	7.3.5	Main Drawback	311
7.4		Proportional Counters	312
	7.4.1	Principle	312
	7.4.2	Construction	312
	7.4.3	Working	313
	7.4.4	Uses	314
	7.4.5	Main Disadvantage	314
7.5		Geiger-Müller (GM) Counters	314
	7.5.1	Principle	315
	7.5.2	Construction	315
	7.5.3	Working	315
	7.5.4	Main Uses	318
	7.5.5	Main Drawback	318
7.6		Scintillation Detectors	319
	7.6.1	Scintillation Detector/Crystal	320
	7.6.2	Photomultiplier Tubes	322
	7.6.3	Electronic Circuitry	322
	7.6.4	Uses of Scintillation Detectors	327
	7.6.5	Limitations of Scintillation Detectors	327
7.7		Semiconductor Radiation Detectors	327
	7.7.1	Diffused Junction Detector	329
	7.7.2	Silicon Surface Barrier Detectors	330
	7.7.3	Ion Implantation Detectors	330
	7.7.4	Silicon Lithium Si(Li) Detectors	330
	7.7.5	Germanium Lithium Ge(Li) Detectors	331
	7.7.6	High Purity Germanium Detectors	332
7.8		Cloud Chamber	334
	7.8.1	Principle	334
	7.8.2	Construction	334
	7.8.3	Working	335
	7.8.4	Advantages	335
	7.8.5	Limitations	335
7.9		Bubble Chamber	336
	7.9.1	Principle	336
	7.9.2	Construction	336
	7.9.3	Working	337
	7.9.4	Advantages	337
	7.9.5	Limitations	337
7.10		Spark Chamber	337
	7.10.1	Principle	337
	7.10.2	Construction	337
	7.10.3	Working	338
	7.10.4	Advantages	338
	7.10.5	Limitation	338

7.11	Nuclear Emulsions	339
7.11.1	Advantages	339
7.11.2	Limitations	339
7.12	Cerenkov Counters	339
7.12.1	Advantages	341
7.12.2	Limitations	341
	Numerical Problems	341
	Review Questions	355

## 8 Particle Physics ..... 359–407

8.1	Introduction	359
8.2	Production of Elementary Particles	360
8.2.1	Cosmic Rays	360
8.2.2	Particle Accelerators	360
8.2.3	Nuclear Reactors	361
8.3	Types of Interactions	361
8.3.1	Gravitational Interactions	361
8.3.2	Electromagnetic Interactions	362
8.3.3	Strong Interactions	362
8.3.4	Weak Interactions	363
8.4	Classification of Elementary Particles	363
8.4.1	Quanta of Forces	364
8.4.2	Matter Particles	365
8.4.3	Antiparticles	365
8.4.4	Observation and Production of Antimatter	366
8.5	Mass Spectra and Decays of Elementary Particles	366
8.5.1	Leptons	367
8.5.2	Hadrons	370
8.5.3	Mesons	371
8.5.4	Baryons	373
8.6	Quantum Numbers	376
8.6.1	Spin ( $S$ )	376
8.6.2	Charge ( $Q$ )	377
8.6.3	Parity ( $P$ )	377
8.6.4	Lepton Number ( $L$ )	377
8.6.5	Baryon Number ( $B$ )	378
8.6.6	Isospin ( $I$ )	378
8.6.7	Strangeness ( $S$ )	379
8.6.8	Gell–Mann–Nishijima Scheme	379
8.6.9	Hypercharge ( $Y$ )	381
8.7	Conservation Laws	381
8.7.1	Conservation of Charge	382
8.7.2	Conservation of Lepton Number	382
8.7.3	Conservation of Baryon Number	383
8.7.4	Conservation of Isospin ( $I$ )	383
8.7.5	Conservation of Component of Isospin ( $I_3$ )	384

8.7.6	Conservation of Hypercharge	384
8.7.7	Conservation of Parity ( <i>P</i> )	384
8.7.8	Conservation of Charge Conjugation Parity ( <i>C</i> )	385
8.7.9	Time Reversal ( <i>T</i> ) Symmetry	385
8.7.10	CPT Theorem	385
8.7.11	Permutation Symmetry and Spin Statistics Theorem	385
8.8	Weak Decays of Strange Particles	386
*8.9	Particle Symmetries	386
8.9.1	SU(2) Symmetry	387
8.9.2	SU(3) Symmetry	388
8.9.3	Higher Symmetries	390
8.10	Quarks	390
8.11	Qualitative Description of Quark Model	391
8.11.1	Observation of Quarks	396
8.11.2	Colour: A New Degree of Freedom	397
*8.12	Recent Developments	398
8.12.1	Quantum Field Theory of Interactions	398
8.12.2	Unification of Fundamental Forces	399
	<i>Numerical Problems</i>	400
	<i>Review Questions</i>	405

408–415

**9 Cosmic Rays**

9.1	Introduction	408
9.2	Discovery of Cosmic Rays	408
9.3	The Latitude Effect	409
9.4	East–West Asymmetry Effect	410
9.5	The Altitude Effect	410
9.6	Primary and Secondary Cosmic Rays	411
9.6.1	Primary Cosmic Rays	411
9.6.2	Secondary Cosmic Rays	411
9.7	Cosmic-Ray Showers	412
9.8	Origin of Cosmic Radiations	413
9.8.1	Solar Cosmic Radiations	413
9.8.2	Galactic Cosmic Radiations	414
9.8.3	Extragalactic Cosmic Radiations	414
	<i>Review Questions</i>	414

<b>Appendix A</b>	<b>Useful Constants</b>	417–419
<b>Appendix B</b>	<b>The Periodic Table</b>	420
<b>Appendix C</b>	<b>Table of Elements</b>	421–423
<b>Appendix D</b>	<b>Myths and Realities</b>	424–425
<b>Index</b>		427–432

**Note:** Some sections of this book marked with asterisk (\*) may be skipped in the first reading.
