

INTRODUCTION TO
Quantum
Electrodynamics
AND
Particle Physics

Deep Chandra Joshi

CONTENTS

1. Elementary Particles	1
1.1 Introduction	1
1.2 The Classical Era (1897-1932)	1
1.3 The Years of Photon (1900-1924)	3
1.4 The Years of Mesons (1934-1947)	4
1.5 The Years of Antiparticles (1930-1956)	6
1.5.1 Antiparticles and Crossing Symmetry	9
1.6 The Years of Neutrinos (1930-1962)	10
1.6.1 Sources of Neutrinos	14
1.7 The Years of Strange Particles (1947-1960)	15
1.8 The Years of Resonances (1961-)	20
1.9 The Fundamental Interactions	29
1.9.1 Gravitational Interaction	29
1.9.2 Electromagnetic Interactions	31
1.9.3 The Feynman Diagrams	32
1.9.4 Range and Strength of Electromagnetic Interaction	39
1.9.5 The Strong Interactions	41
1.9.6 The Weak Interactions	47
1.10 Conservation Laws	50
1.11 Classification of Elementary Particles	74
1.12 The Modern Era	77
1.12.1 The Eightfold Way	78
1.12.2 The Quark Structure of Hadrons	82
1.12.3 Intermediate Vector Bosons	96
1.13 The Ultimate Fundamental Particles	98
1.13.1 Basic Fermions	98
1.13.2 Leptons	98
1.13.3 Gauge Bosons	98
1.13.4 Higgs Boson	99
1.13.5 Antiparticles	99
1.14 Assignments	99
1.15 Objective Questions	101

2	Quantum Electrodynamics	117
2.1	Introduction	117
2.2	Preliminaries	117
2.2.1	Time Ordered Product and Propagators	117
2.2.2	Some Definitions	123
2.3	Quantum Electrodynamic Processes	129
2.3.1	Compton Scattering	129
2.3.2	Electron-Positron Annihilation	145
2.3.3	Moller (electron-electron) Scattering	156
2.3.4	Bhabha (positron-electron) Scattering	171
2.4	Assignments	178
2.5	Objective Questions	181
3	Symmetries and Groups	187
3.1	Introduction	187
3.2	Groups and their properties	187
3.3	Lie Groups	190
3.3.1	Generators of Lie Groups and the Lie Algebra	191
3.3.2	Representations of Lie Groups	197
3.4	Group SU(2) and its Irreducible Representations	201
3.5	SU(3) Group and its Irreducible Representations	210
3.5.1	SU(3) Shift Operators	211
3.5.2	Irreducible Representations of SU(3)	213
3.5.3	Product of SU(3) Representations	220
3.5.4	The Gell-Mann-Okubo Mass Formula	228
3.5.5	Applications of SU(3) symmetry Group	231
3.5.6	Limitations of SU(3) Group	232
3.5.7	Extension of SU(3) Group: SU(4)	233
3.5.8	SU(6) Quark Model	239
3.6	Assignments	264
3.7	Objective Questions	266
4	Weak Interactions	273
4.1	Introduction	273
4.1.1	Purely Leptonic Interactions	273
4.1.2	Semileptonic Interactions	273
4.2	Fermi's Theory of Beta Decay (Non-Relativistic)	275
4.2.1	The Allowed and Forbidden Transitions	280
4.3	Helicity and Handedness	283
4.4	The Two Component Theory of Neutrinos	286
4.5	Fermi's Relativistic Theory of Beta Decay	290
4.5.1	The V-A Interaction	294

4.5.2	Universality of Weak Interactions	296
4.5.3	The Intermediate Vector Boson	299
4.5.4	Cabibbo Theory	303
4.5.5	Charged Weak Quark Current and Suppressed Weak Decays	320
4.5.6	GIM Mechanism and Charmed Quarks	321
4.5.7	The Cabibbo-Kobayashi-Maskawa (CKM) Matrix	325
4.6	Assignments	327
4.7	Objective Questions	329
5.	Gauge Symmetries	338
5.1	Introduction	338
5.2	Global Gauge Symmetry and Noether's Theorem	339
5.3	U(1) Local Gauge Symmetry and QED	342
5.4	SU(2) Global Gauge Symmetry	346
5.5	SU(2) Local Gauge Symmetry and Yang-Mills Fields	349
5.6	Properties of Yang-Mills Fields	354
5.6.1	Adjoint Representation	354
5.6.2	Electric and Magnetic Fields	356
5.7	SU(3) Global Gauge Invariance	358
5.8	SU(3) Local Gauge Symmetry and QCD	360
5.9	Spontaneous Symmetry Breaking	362
5.9.1	The Mass Term	363
5.9.2	Mass Generation through Spontaneous Symmetry Breaking	363
5.9.3	Spontaneous Breaking of Global Gauge Symmetry	368
5.9.4	The Spontaneous Breaking of U(1) Local Gauge Symmetry	373
5.9.5	Spontaneous Breaking of Local SU(2) Gauge Symmetry	379
5.10	Assignments	387
5.11	Objective questions	390
6.	The Standard Model	399
6.1	Introduction	399
6.2	The GWS Model	399
6.2.1	Electromagnetic and Weak Embedding	400
6.2.2	The Combined Covariant Derivative	403
6.2.3	Lagrangian Density and Mass Term	404
6.2.4	Calculation of Interactions	406
6.2.5	Neutral Gauge Fields	408
6.2.6	Electromagnetic Coupling Constant e	410

6.2.7	Structure of Neutral Current	412
6.2.8	Spontaneous Breaking of Local Gauge Symmetry	413
6.3	Renormalizability of Electroweak Gauge Theory	426
6.4	Quantum Chromodynamics	429
6.5	The Standard Model Lagrangian	431
6.6	Experimental Evidences for the Standard Model	432
6.6.1	Experimental Tests of QED	432
6.6.2	Evidences for Weak Interactions	433
6.7	Evidences for Quantum Chromodynamics	440
6.7.1	Evidence for Colour	440
6.7.2	Variation of Strong Coupling Constant with Energy	443
6.8	Grand Unification	445
6.8.1	Implications of Grand Unification	449
6.8.2	Gravitational Interaction and the Planck Scales	451
6.9	Grand Unification and the Big Bang	452
6.10	Limitations Of SM and GUTs	456
6.10.1	Limitations of the Standard Model	456
6.10.2	Limitations of GUTs	458
6.11	Beyond the SM and GUTs	458
6.11.1	Supersymmetry and Supergravity	459
6.11.2	Technicolour Theories	460
6.11.3	Superstring Theories	460
6.12	Assignments	461
6.13	Objective Questions	464
	Appendix A: Conventions	478
	Appendix B: Green's Functions of Field Theory	496
	Appendix C: Schwinger's Action Principle	513
	Appendix D: Electromagnetic Field	526
	Appendix E: Continuous and Discrete Symmetries	541
	Bibliography	543
	Index	547
