

G. D. BARUAH

# LASERS AND NON-LINEAR OPTICS

*A Pragati Edition*

# Contents

## **1. HIGHLIGHTS IN THE DEVELOPMENT OF LASER ..... 1-22**

- 1.1 What is laser 1
- 1.2 Scientific and historical origin of laser and highlights in the development 1
- 1.3 Ammonia beam maser 5
- 1.4 Analogous phenomena in nature 6
- 1.5 Einstein's relation 7
- 1.6 Stimulated emission, population inversion and gain 12
- 1.7 Three level system 14
- 1.8 Various types of lasers 18
- 1.9 Properties of laser light 19
- 1.10 Plan of the book 21
- Exercise* 22

## **2. OPTICAL RESONATORS ..... 23-33**

- 2.1 Introduction 23
- 2.2 Fabry-Perot Resonator with plane parallel reflectors 25
- 2.3 Resonators with circular reflectors 27
- 2.4 Resonators with confocal spherical or paraboloid mirrors 28
- 2.5 Unstable Resonators 31
- Exercise* 33

## **3. LINE SHAPES AND THRESHOLD CONDITION OF OSCILLATION ..... 34-50**

- 3.1 Spectral line shape 34
- 3.2 Homogeneous broadening 36
- 3.3 Collision broadening 39
- 3.4 Inhomogeneous broadening 39
- 3.5 Folded Lorentz Gaussian distribution 40
- 3.6 Width and shape of lines in solids 41
- 3.7 Threshold condition for oscillation 42
- Exercise* 49

## **4. GAS LASERS ..... 51-84**

- 4.1 Introduction 51
- 4.2 Population inversion by collisions in a gas discharge 52
- 4.3 Energy levels of helium and neon 55
- 4.4 Design of He-Ne laser 56
- 4.5 Small gas laser 58
- 4.6 Laser mirrors and other components of He-Ne gas laser 59

4.7 Cesium maser 61  
4.8 Maser action in ionized substances 63  
    A. Hg<sup>+</sup> laser 63  
    B. Argon ion laser 63  
    C. Design characteristics of ion lasers 65  
    D. Mode-locked ion lasers 67  
4.9 Laser pumped by ion beams 69  
4.10 Gaseous optical maser 69  
4.11 Molecular nitrogen lasers 70  
4.12 CO<sub>2</sub> Laser 76  
4.13 Excimer Lasers 78  
4.14 Free Electron laser 80  
    Exercise 83

**5. SOLID STATE LASER..... 85-108**

5.1 Introduction 85  
5.2 Solid state lasers 87  
    A. Rate equation and population inversion 87  
    B. Threshold condition of oscillation 89  
    C. Ruby Laser 90  
    D. Critical inversion density in ruby 92  
5.3 Design and optical pumping techniques of ruby laser 93  
5.4 The continuous wave ruby laser 94  
5.5 Giant pulse solid optical maser 95  
    A. Q-switched laser using bleachable absorbers 97  
    B. Dynamics of Q-switched laser 98  
5.6 Optical masers using trivalent rare earth ions 99  
5.7 Divalent rare earth ion lasers 101  
5.8 Actinides and other solid state lasers 101  
5.9 Nd : YAG laser 102  
    Exercise 108

**6. SEMI-CONDUCTOR LASERS ..... 109-121**

6.1 Introduction 109  
6.2 Basic concepts 110  
6.3 Threshold condition of oscillation 114  
6.4 Basic structure of *p-n* junction laser 115  
6.5 Confinement of electromagnetic radiation in a *p-n* junction 118  
6.6 Quantum well lasers 120  
    Exercise 121

**7. DYE LASER ..... 122-142**

7.1 Introduction 122

- 7.2 Spectroscopic properties of organic molecules and dyes 122
- 7.3 Different dye molecules and their structures 125
- 7.4 Dye lasers 128
- 7.5 Pumping arrangement 132
- 7.6 Generation of ultrashort pulse and mode locking 137
- 7.7 Continuous wave dye laser 141
- Exercise 142

## **8. NON LINEAR OPTICS ..... 143-189**

- 8.1 Introduction 143
- 8.2 Nonlinear Response 143
- 8.3 Nonlinear phenomena and optical harmonic generation 145
- 8.4 Experiment of Franken 147
- 8.5 Phase matching 150
- 8.6 Nonlinear susceptibility tensors 151
- 8.7 Parametric Amplification 154
- 8.8 Manley-Rowe Relations 155
- 8.9 Stimulated Raman Scattering 157
- 8.10 Experiment of Chiao and Stoicheff 166
- 8.11 Theory of Raman and photon maser 167
- 8.12 Stimulated Raman Scattering in gas mixtures and negative Raman effect 173
- 8.13 Resonance Raman Scattering 180
- 8.14 Electrical Breakdown in Gases and Laser induced plasmas 180
- 8.15 Theory of self-focussing 186
- Exercise 189

## **9. FAR ULTRAVIOLET AND X-RAY LASER ..... 190-205**

- 9.1 Introduction 190
- 9.2 Mössbauer Line narrowing 192
- 9.3 Survey of current XUV Laser 194
- 9.4 Nonplasma schemes 196
- 9.5 Plasma Schemes 199
- 9.6 X-ray Laser cavity 204
- 9.7 Uses of X-ray lasers 204
- Exercise 205

## **10. THEORY OF LASER ..... 206-245**

- 10.1 Introduction 206
- 10.2 Atom Field Interaction 206
- 10.3 Induced Resonant Transitions and Einstein's co-efficient 209
- 10.4 Time dependent population, Inclusion of Decay phenomena : Rabi Approach 213
- 10.5 The Density Matrix 218
- 10.6 Vector Model of Density Matrix 221

10.7 Semiclassical Theory of Laser 224  
10.8 Single Mode Operation in the Rate Equation Approximation. Polarization of the medium 229  
Exercise 245

**11. APPLICATIONS OF LASERS ..... 246-266**

11.1 Introduction 246  
11.2 Modulation Methods 246  
11.3 Communications 247  
11.4 Applications Using Focussed Laser Radiation 249  
11.5 Medical Applications 249  
11.6 Coherent Light Image and Data processing 250  
11.7 Holography 252  
11.8 Photorefractive Holographic Recording 254  
11.9 Laser for fusion 255  
11.10 Laser cooling 256  
11.11 Integrated Optics 261  
11.12 Future Laser Applications 264  
11.13 Quantum Interference and Lasing without Inversion (LWI) 264  
Exercise 266
