Contents

<i>Preface to the Sixth Edition</i>	(v)
<i>Preface to the First Edition</i>	(vii)
1. Real Numbers	1–26
1. Introduction	1
2. Field Structure and Order Structure	9
3. Bounded and Unbounded Sets: Supremum, Infimum	12
4. Completeness in the Set of Real Numbers	15
5. Absolute Value of a Real Number	21
2. Open Sets, Closed Sets and Countable Sets	27–43
1. Introduction	27
2. Limit Points of a Set	31
3. Closed Sets: Closure of a Set	35
4. Countable and Uncountable Sets	41
3. Real Sequences	44–98
1. Sequences	44
2. Limit Points of a Sequence	47
3. Limits—Inferior and Superior	50
4. Convergent Sequences	56
5. Non-Convergent Sequences (<i>Definitions</i>)	57
6. Cauchy's General Principle of Convergence	62
7. Algebra of Sequences	65
8. Some Important Theorems	74
9. Monotonic Sequences	86
4. Infinite Series	99–144
1. Introduction	99
2. Positive Term Series	103

3. Comparison Tests for Positive Term Series 107
4. Cauchy's Root Test 113
5. D'Alembert's Ratio Test 114
6. Raabe's Test 116
7. Logarithmic Test 121
8. Integral Test 122
9. Gauss's Test 125
10. Series with Arbitrary Terms 130
11. Rearrangement of Terms 139

5. Functions of a Single Variable (I)

145–176

1. Limits 145
2. Continuous Functions 158
3. Functions Continuous on Closed Intervals 166
4. Uniform Continuity 171

6. Functions of a Single Variable (II)

177–208

1. The Derivative 177
2. Continuous Functions 180
3. Increasing and Decreasing Functions 184
4. Darboux's Theorem 187
5. Rolle's Theorem 188
6. Lagrange's Mean Value Theorem 189
7. Cauchy's Mean Value Theorem 191
8. Higher Order Derivatives 198

7. Applications of Taylor's Theorem

209–229

1. Extreme Values (*Definitions*) 209
2. Indeterminate Forms 215

8. Functions

230–262

1. Power Series 230
2. Exponential Functions 232
3. Logarithmic Functions 234
4. Trigonometric Functions 237
5. Functional Equations 243
6. Functions of Bounded Variation 244
7. Vector-Valued Functions 255

263–318

9. The Riemann Integral

1. Definitions and Existence of the Integral 263
2. Refinement of Partitions 270
3. Darboux's Theorem 272
4. Conditions of Integrability 273
5. Integrability of the Sum and Difference of Integrable Functions 276
6. The Integral as a Limit of Sums (*Riemann Sums*) 284
7. Some Integrable Functions 291
8. Integration and Differentiation (*The Primitive*) 295
9. The Fundamental Theorem of Calculus 296
10. Mean Value Theorems of Integral Calculus 301
11. Integration by Parts 305
12. Change of Variable in an Integral 307
13. Second Mean Value Theorem 308

319–339

10. The Riemann-Stieltjes Integral

1. Definitions and Existence of the Integral 319
2. A Condition of Integrability 322
3. Some Theorems 323
4. A Definition (*Integral as a limit of sum*) 327
5. Some Important Theorems 334

340–392

11. Improper Integrals

1. Introduction 340
2. Integration of Unbounded Functions with Finite Limits of Integration 340
3. Comparison Tests for Convergence at a of $\int_a^b f dx$ 344
4. Infinite Range of Integration 359
5. Integrand as a Product of Functions (*Convergence at ∞*) 378

12. Uniform Convergence

393–434

1. Pointwise Convergence 393
2. Uniform Convergence on an Interval 395
3. Tests for Uniform Convergence 401
4. Properties of Uniformly Convergent Sequences and Series 411
5. The Weierstrass Approximation Theorem 429

13. Power Series	435–451
1. Introduction	435
2. Definitions	435
3. Properties of Functions Expressible as Power Series	439
4. Abel's Theorem	442
14. Fourier Series	452–481
1. Trigonometrical Series	452
2. Some Preliminary Theorems	454
3. The Main Theorem	460
4. Intervals Other Than $[-\pi, \pi]$	469
15. Functions of Several Variables	482–549
1. Explicit and Implicit Functions	482
2. Continuity	491
3. Partial Derivatives	495
4. Differentiability	498
5. Partial Derivatives of Higher Order	506
6. Differentials of Higher Order	513
7. Functions of Functions	515
8. Change of Variables	522
9. Taylor's Theorem	533
10. Extreme Values: Maxima and Minima	537
11. Functions of Several Variables	543
16. Implicit Functions	550–574
1. Definition	550
2. Jacobians	554
3. Stationary Values under Subsidiary Conditions	563
17. Integration on \mathbb{R}^2	575–635
1. Line Integrals	575
2. Double Integrals	583
3. Double Integrals Over a Region	604
4. Green's Theorem	615
5. Change of Variables	623

636–707

18. Integration on \mathbb{R}^3

1. Rectifiable Curves 636
2. Line Integrals 641
3. Surfaces 646
4. Surface Integrals 654
5. Stokes' Theorem (*First Generalization of Green's Theorem*) 670
6. The Volume of a Cylindrical Solid by Double Integrals 674
7. Volume Integrals (*Triple Integrals*) 681
8. Gauss's Theorem (*or Divergence Theorem*)
(*Second Generalization of Green's Theorem*) 690

708–782

19. Metric Spaces

1. Definitions and Examples 708
2. Open and Closed Sets 719
3. Convergence and Completeness 737
4. Continuity and Uniform Continuity 746
5. Compactness 757
6. Connectedness 774

783–840

20. The Lebesgue Integral

1. Measurable Sets 783
2. Sets of Measure Zero 791
3. Borel Sets 795
4. Non-Measurable Sets 795
5. Measurable Functions 799
6. Measurability of the Sum, Difference, Product and Quotient of
Measurable Functions 801
7. Lebesgue Integral 806
8. Properties of Lebesgue Integral for Bounded Measurable Functions 810
9. Lebesgue Integral of a Bounded Function Over a Set of Finite Measure 815
10. Lebesgue Integral for Unbounded Functions 820
11. The General Integral 822
12. Some Fundamental Theorems 823
13. Lebesgue Theorem on Bounded Convergence 826
14. Integrability and Measurability 829
15. Lebesgue Integral on Unbounded Sets or Integrals 838
16. Comparison with Riemann Integral for Unbounded Sets 839

Appendix I—Beta and Gamma Functions

841–847

Appendix II—Cantor's Theory of Real Numbers

848–861

1. Sequences of Rational Numbers 848
2. Cantor Real Number 850
3. Addition and Multiplication in \mathbb{R} 851
4. Order in \mathbb{R} 854
5. Real Rational and Irrational Numbers 857
6. Some Properties of Real Numbers 858
7. Completeness in \mathbb{R} 859

Bibliography

862–864

Index

865–872
