

order Linear Differential Equations 155 3.6 Some Macroeconomic Examples on the Use of Differential Equations 153; Harrod-Domar Model of Growth 153; Cobb-Douglas Model of Growth 160; Domar's Model of Debt 162

#### Chapter IV: Introduction to Difference Equations 164

4.1 Definitions 164 4.2 Linear Difference Equations with Constant Coefficients 165 4.3 Solution of Different Equations 165 4.4 Solution of Linear Homogeneous Difference Equation of the First-order 166 4.5 Solution of Linear Non-homogeneous Difference Equation of the First-order 169 4.6 Solution of Linear Homogeneous Difference Equations of the Second-order 173 4.7 Solution of Linear Non-homogeneous Difference Equations of the Second-order 176 4.8 Complications in Solving Second-order Linear Difference Equations 178 (i) Equality of Roots of  $\lambda^2 - a\lambda - b = 0$  178 (ii) Indeterminacy of the Constant Term 180 (iii) Solutions Involving Complex Numbers 182 4.9 The General Case of Order  $n$  183 4.10 Some Applications to Macroeconomics 190; The Interaction between the Multiplier and the Accelerator 190; Harrod Model of Growth 193

#### Chapter V: An Introduction to Linear Programming and the Theory of Games 195

5.1 Definitions 195 5.2 Graphical Solution of Linear Programming 197 5.3 Duality 201 5.4 Towards a General Solution of Linear Programming Problems 203; The Simplex Method 203 5.5 The Arithmetic of the Simplex Method 215 5.6 Degeneracy 220 5.7 The Simplex and the Dual Problem in Economics 220; Theorems of Duality 221 5.8 Elementary Introduction to Games Theory 226

### PART TWO

#### USE OF MATHEMATICS IN ECONOMIC ANALYSIS

#### Chapter VI: Theory of Demand 239

6.1 Utility Model of Demand 239 6.1.1 Utility 239; 6.1.2 Marginal Utility 239 6.1.3 Law of Diminishing Marginal Utility 240 Definition of the Law 240; Young's Theorem 242; Total Change in Utility 242 6.1.4 Utility Maximization 242 6.1.5 Consumers' Equilibrium according to the Marshallian Approach 247 6.1.6 Derivation of the Demand Curve according to the Marshallian Approach 249 6.2 Indifference Curves Model of Demand 253 6.2.1 Definition and Properties of Indifference Curves 253 6.2.2 The Marginal Rate of Substitution 254 6.2.3 The Consumer Equilibrium 256 6.2.4 The Income Effect and the Substitution Effect 265 6.2.5 Derivation of Demand Curve according to the Ordinal Utility Approach 272 6.3.1 Revealed Preference Model of Demand 273 6.3.2 Derivation of Demand Curve 275 6.4 Demand Analysis 278 6.4.1 The Law of Demand 278 6.4.2 Elasticity 278 6.4.3 Total Revenue, Average Revenue, Marginal Revenue and the Concept of Elasticity 287 6.4.4 Relationship between MR and Elasticity 287 6.4.5 Deriving the Marginal Revenue Curve from a given Demand (or Average) Revenue Curve 289 6.5 Consumer Surplus 291 6.6 Dynamics of Market Prices 292 (i) Cobweb Model of Demand 292 (ii) Dynamics of Market Equilibrium 297

#### Chapter VII: Theory of Costs of Production 301

7.1 Definitions 301 7.2 Marginal Cost 301 7.3 Relationship between Marginal Cost and Marginal Product 302 7.4 Relationship between Average Cost and Marginal Cost 301 7.5 Cost Elasticity of Output and Returns to Scale 308 7.6 Conditions of Cost-minimization 310 7.7 Long-run Cost of Production 316 7.8 Cost-minimization in a Multiproduct Firm 318

#### Chapter VIII: Theory of Production 319

8.1 Production Functions 319 8.2 Elasticity of Substitution 324 8.3 The Homogeneous Production Functions 331 8.4 The Constant Elasticity Production Function 335 8.5 How to Derive the Cost Function from the Production Function 341 (i) The Case of the Cobb-Douglas Production Function 341 (ii) The Case of the CES Production Function 343

#### Chapter IX: The Theory of Markets 347

9.1 Perfect Competition 347 9.2 Monopoly 350 9.3 Oligopoly 362

#### Chapter X: The Market for Factors of Production 369

10.1 Demand for Factors of Production 369 10.2 Effect of Changes in Price of Factors on Their Demand 370 10.3 Factor Shares 374

#### Chapter XI: Linear Programming and the Theory of the Firm 379

11.1 Need for Linear Programming 379 11.2 Linear Programming and Optimum Combination of Factors 379 11.3 Linear Programming and Optimum Combination of Products 384 11.4 The Analogy between Linear Programming and Marginal Analysis 386

#### Chapter XII: General Equilibrium Analysis 388

12.1 Market Interrelationships 388 12.2 An Introduction to Input-Output Analysis 390
