Organic Chemistry

Volume 2 Stereochemistry and the
Chemistry Natural Products

FIFTH EDITION

I. L. Finar

 Pearson

Contents

List of journal abbreviations	5
Preface to the fourth edition	11
Preface to the fifth edition	13
1 Physical properties and chemical constitution	15
Introduction, 15. The International System of Units, 16. Van der Waals forces, 16. The hydrogen bond, 18. Melting point, 19. Boiling point, 20. Solubility, 21. Viscosity, 21. Refractive index, 22. Molecular rotation, 23. Optical rotatory dispersion, 24. Circular dichroism, 26. Dipole moments, 26. Magnetic susceptibility, 28. Absorption spectra, 29. Ultraviolet and visible spectroscopy, 30. Infrared spectroscopy, 33. Microwave spectroscopy, 41. Raman spectra, 42. Nuclear magnetic resonance, 42. Electron spin resonance, 56. Mass spectrometry, 60. Diffraction methods, 76. X-ray diffraction, 77. Electron diffraction, 77. Neutron diffraction, 78. Chromatography, 78.	
2 Optical isomerism	83
Stereoisomerism, 83. Optical isomerism, 84. The tetrahedral carbon atom, 84. Conformational analysis, 92. Conventions used in stereochemistry, 98. Correlation of configurations, 101. Specification of absolute configurations, 104. Elements of symmetry, 107. Molecular symmetry, 109. The number of isomers in optically active compounds, 111. The racemic modification, 118. Properties of the racemic modification, 121. Resolution of racemic modifications, 124. Optical purity, 129. The cause of optical activity, 130. Correlations of sign and magnitude of rotation with absolute configuration, 133.	
3 Nucleophilic substitution at a saturated carbon atom, asymmetric synthesis	134
Mechanisms, 134. Factors affecting mechanisms, 136. The Walden inversion (Optical inversion), 147. Mechanism of the Walden inversion, 148. The S_Ni mechanism, 150. Participation of neighbouring groups in nucleophilic substitutions, 151. Asymmetric synthesis, 159.	

- 4 Geometrical isomerism, stereochemistry of alicyclic compounds**
 Nature of geometrical isomerism, 170. Nomenclature of geometrical isomers, 178.
 Determination of the configuration of geometrical isomers, 176. Stereochemistry of
 addition reactions, 181. Stereochemistry of elimination reactions, 188. Interconversion
 (stereomutation) of geometrical isomers, 194. Stereochemistry of cyclic systems, 197.
 Conformational analysis, 201. Fused ring systems, 209. Stereochemistry of cyclic systems, 197.
 Bridged-ring systems, 226. Catenanes, 227. Conformational analysis, 215.
- 5 Stereochemistry of biphenyl compounds**
 Configuration of the biphenyl molecule, 229. Optical activity of biphenyl compounds, 230.
 Absolute configurations of biphenyl compounds, 234. Other examples of atropisomerism,
 237. Molecular overcrowding, 240. Racemisation of biphenyl compounds, 242. Evidence
 for the obstacle theory, 246. Stereochemistry of the allenes, 247. Stereochemistry of the
 spirans, 250.
- 6 Stereochemistry of some elements other than carbon**
 Shapes of molecules, 253. Stereochemistry of nitrogen compounds, 254. Stereochemistry
 of phosphorus compounds, 272. Stereochemistry of arsenic compounds, 275.
 Stereochemistry of antimony compounds, 280. Stereochemistry of sulphur compounds,
 281. Stereochemistry of silicon compounds, 287. Stereochemistry of tin compounds, 288.
 Stereochemistry of germanium compounds, 288. Stereochemistry of selenium compounds,
 289. Stereochemistry of tellurium compounds, 289.
- 7 Carbohydrates**
 Determination of the configuration of the monosaccharides, 290. Ring structure of the
 monosaccharides, 295. Glycosides, 298. Configuration of C_1 in glucose, 299. Hudson's
 rules, 300. Methods for determining the size of sugar rings, 301. Conformational
 analysis, 312. Isopropylidene derivatives of the monosaccharides, 323. Other condensation
 products of the sugars, 325. Some sugar derivatives, 325. Vitamin C or L(+) -ascorbic
 acid, 328. Disaccharides, 334. Trisaccharides, 343. Polysaccharides, 348. Determination
 of the molecular weights of macromolecules, 350. Photosynthesis, 357. Glycosides, 359.
- 8 Terpenoids**
 Introduction, 368. Isolation of monoterpenoids and sesquiterpenoids, 369. General methods
 of determining structure, 370. Monoterpenoids, 372. Acyclic monoterpenoids, 373.
 Monocyclic monoterpenoids, 382. Bicyclic monoterpenoids, 398. Wagner- Meer-wein
 and Nametkin rearrangements, 414. Correlation of configurations, 419. Sesquiterpenoids,
 422. Acyclic sesquiterpenoids, 422. Monocyclic sesquiterpenoids, 429. Bicyclic
 sesquiterpenoids, 435. Tricyclic sesquiterpenoids, 452. Diterpenoids, 454. Tetracyclic
 diterpenoids, 461. Triterpenoids, 465. Tricyclic triterpenoids, 466. Tetra-cyclic
 triterpenoids, 466. Pentacyclic triterpenoids, 467. Biosynthesis of terpenoids, 467. The
 monoterpenoids, 470. The sesquiterpenoids, 471. The diterpenoids, 472. The triterpenoids,
 473. Polyterpenes, 473. Rubber, 473.

- 9 Carotenoids** 477
Introduction, 477. Carotenes, 480. B-Carotene, 480. α -Carotene, 486. Lycopene, 487. γ -Carotene, 489. Vitamin A, 491. Xanthophylls, 495. Carotenoid acids, 501. Biosynthesis of carotenoids, 504.
- 10 Polycyclic aromatic hydrocarbons** 506
Introduction, 506. General methods of preparation of polynuclear hydrocarbons, 507. Linear ortho-fused polynuclear hydrocarbons, 515. Non-linear ortho-fused polynuclear hydrocarbons, 518. Ortho- and peri-fused polynuclear hydrocarbons, 521. Spectral properties of polynuclear hydrocarbons, 526. Carcinogenic properties, 527. Quinonoid pigments, 527.
- 11 Steroids** 531
Introduction, 531. Sterols, 532. Cholesterol, 532. Spectral properties of steroids, 542. Stereochemistry of the steroids, 545. Absolute configurations of steroids, 547. Nomenclature of steroids, 553. Some reactions of steroids, 554. Synthesis of cholesterol, 565. Ergosterol, 571. Vitamin D, 573. Stigmasterol, 577. Biosynthesis of sterols, 581. Bile acids, 583. Structure of bile acids, 585. Steroid hormones, 587. Androgens, 587. Oestrogens, 591. Artificial hormones, 600. Gestogens, 601. Homosteroids and non-steroids, 605. Adrenocortical hormones, 607. Some methods used in steroid chemistry, 614. Steroidal glycosides, 616. Steroidal alkaloids, 618.
- 12 Heterocyclic compounds containing two or more hetero-atoms** 620
Nomenclature, 620. Spectral properties, 621. Azoles, 622. Pyrazole group, 622. Imidazole group, 628. Oxazole group, 631. Thiazole group, 633. Osotriazoles and triazoles, 635. Oxadiazoles, 637. Sydnones, 637. Tetrazole group, 638. Azines, 639. Diazine group, 639. Pyridazines, 639. Pyrimidines, 640. Pyrazines, 647. Benzodiazines, 648. Diazines containing one nitrogen atom and an oxygen or sulphur atom, 649. Oxazines, 649. Phenoxazines, 650. Thiazines, 650. Triazines and tetrazines, 650.
- 13 Amino-acids and proteins** 652
Classification of the amino-acids, 652. General methods of preparation of the amino-acids, 652. Analysis of amino-acids from protein hydrolysates, 659. General properties of the amino-acids, 660. Thyroxine (thyroxin), 668. Proteins, 670. General nature of proteins, 670. Classification of proteins, 672. The peptide linkage, 674. The primary structure of peptides, 675. Synthesis of peptides, 682. Oxytocin, 687. Insulin, 689. Thyrotropin releasing hormone, 690. Antamanide, 691. The spatial arrangement of protein molecules, 692. Enzymes, 697. General nature of enzymes, 697. Nomenclature and classification, 697. Cofactors, 698. Specificity of enzyme action, 700. Mechanism of enzyme action, 700. Biosynthesis of amino-acids, 703.
- 14 Alkaloids** 710
Definition of an alkaloid, 710. Extraction of alkaloids, 710. General properties, 711.

General methods for determining structure, 711. Classification of the alkaloids, 716.
 Phenylethylamine group, 716. Pyrrolidine group, 722. Pyridine and piperidine groups,
 724. Pyrrolidine-pyridine group, 731. Quinoline group, 746. Isoquinoline group, 750.
 Phenanthrene group, 762. Indole group, 770. Biosynthesis of alkaloids, 775.

15 Anthocyanins

Introduction, 783. General nature of the anthocyanins, 783. Structure of the antho-
 cyanidins, 785. General methods of synthesising the anthocyanidins, 787. Flavones, 791.
 Isoflavones, 802. Biosynthesis of the flavonoids, 803. Depsides, 806. Tannins, 807.

16 Purities and nucleic acids

Introduction, 808. Uric acid, 808. Purine derivatives, 815. Xanthine bases, 819.
 Nucleic acids, 823. Spectra of pyrimidines and purine bases, 824. Structure of nucleosides,
 826. Structure of nucleotides, 831. Ribonucleic acids, 834. Deoxyribonucleic acids, 836.
 Chemical and enzymic syntheses of the polynucleotides, 838. Biosynthesis of proteins, 840.

17 Vitamins

Introduction, 843. Vitamin B complex, 843. Biotins, 855. Vitamin E group, 863.
 Vitamin K group, 869.

18 Chemotherapy

Introduction, 875. Sulphonamides, 875. Antimalarials, 877. Arsenical drugs, 878.
 Antibiotics, 879. The penicillins, 879. Cephalosporin C, 886. Streptomycin, 891.
 Patulin, 893. Chloramphenicol, 895. The macrolide group of antibiotics, 896. Poly-
 peptide antibiotics, 897. Polyacetylene antibiotics, 897.

19 Haemoglobin, chlorophyll and phthalocyanines

Introduction, 899. Haemoglobin, 899. Degradation products of haemoglobin, 899.
 Porphyrins, 903. Spectral properties of porphyrins, 904. Synthesis of porphyrins, 906.
 Synthesis of haemin, 908. Biosynthesis of porphyrin, 910. Bile pigments, 913. Chlorophyll,
 913. Structure of chlorophyll-a, 915. Synthesis of chlorophyll, 918. Recent syntheses of
 porphyrins, 923. Phthalocyanines, 924. Structure of phthalocyanines, 925.
