CONTENTS

Chapter

Pages

B. Mathematical Concepts 1—20

- Curve sketching, linear graphs and slopes
- Inclination and slope of a line (1)
- Curve sketching (2)
- Functions of a real variable (2)
- Differentiation : The Derivative of a function (4)
 - Differentiation formulas (4)
 - Maxima and minima (5)
 - Partial differentiation (7)
 - Cyclic rule (8)
- Integration (8)
 - Methods of integration (9)
 - Integration formulas (9)
- Permutations and combinations (11)
 - Fundamental theorem (11)
 - Permutations (11)
 - Combinations (11)
- Probability (12)
- Other mathematical relations (14)
 - Vectors (14)
 - Matrices (15)
 - Determinants (16)
 - Complex numbers (16)
 - Series (17)
 - Stirling approximation (17)
 - Evaluation of integrals (18)
- Memorabilia Physicomathematica (19)**

1. Quantum Mechanics-I Wave Mechanical Treatment of Simple Systems 21—110

- Electron and the Old Quantum Theory (21)
- Rutherford scattering experiments (23)
- Rutherford atomic model (23)
- Quantum theory of radiation (24)
- Photoelectric effect (24)
- Bohr theory of hydrogen atom (26)
- Bohr theory and the origin of the hydrogen spectrum (28)
- Sommerfeld extension of the Bohr theory (31)
- Alternative explanation for the emission of fine hydrogen spectrum (32)
- Dual character of electron (33)
 - de Broglie's equation (33)
 - The Davisson-Germer experiment (35)
- Heisenberg uncertainty principle (36)
- Compton effect (36)

- Quantum mechanics (or wave mechanics) (37)
- Postulates of quantum mechanics (39)
- The Schrödinger wave equation (40)
- Operators in quantum mechanics (43)
- Solution of the Schrödinger wave equation for some simple systems (45)
 - Particle in a one-dimensional box (45)
 - Particle in a three-dimensional box (52)
 - One-dimensional simple harmonic oscillator (54)
 - Rigid rotor (63)
 - The Schrödinger equation for hydrogen atom (65)
- Zeeman effect (84)
- Pauli's exclusion principle (85)
- Physical interpretation of the hydrogen atom orbitals (86)
- Fine structure in the hydrogen atom spectrum (87)
- Angular momentum in quantum mechanics (87)
- Solved examples in quantum mechanics (89)
- Hermitian operators (106)
- Important theorems of quantum mechanics (107)
- Review questions and problems (109)

2. Quantum Mechanics-II. Advanced Topics And Atomic Spectra (111-172)

- Solution of the Schrödinger equation for multi-electron atoms (111)
 1. Time-independent perturbation theory (111)
 - Non-degenerate perturbation theory (112)
 - Application of the first-order perturbation theory helium atom (115)
 - Degenerate perturbation theory (117)
 - Stark effect on the first excited state of hydrogen atom (119)
 2. The variation method (120)
 - Application of the variation method to helium atom (121)
 - The Hartree and the Hartree-Fock self-consistent field (SCF) method (128)
 - Slater determinant for n-electron atoms (129)
 - The Schrödinger equation for a finite potential barrier: Quantum mechanical tunnelling (132)
 - Simple harmonic oscillator : The algebraic method (137)
 - Angular momentum operators, eigenfunctions, eigenvalues, commutation relations, and ladder operators (141)
 - Derivation of the variation theorem (148)
 - Atomic states and term symbols (149)
 - The term symbols for the p^2 configuration (150)

(i)

- Atomic spectra (154)
- Fine structure (155)
 - Zeeman effect (159)
 - Stark effect (162)
- The Thomas-Fermi model of the atom (163)
- Angular momentum revisited (165)
- Angular momentum matrices (165)
 - Spin angular momentum and the Pauli spin matrices (167)
 - Spin vectors for the spin- $\frac{1}{2}$ system (168)
 - Addition of angular momenta (169)
- Review Questions (171)

3. Chemical Bonding : Molecular Quantum Mechanics 173-246

- Molecular orbital theory (MOT) (174)
- Term symbols for a diatomic molecule (184)
- Symmetry of molecular orbitals (185)
- MOs for homonuclear diatomic molecules (186)
- Molecular orbital energy level diagrams for heteronuclear diatomic molecules (188)
- Valence bond theory (VBT) (192)
- Hybridization (197)
- Calculation of the coefficients of AOs used in hybridization (200)
- Conjugated molecules (204)
- Hückel molecular orbital theory of conjugated systems (205)
- Hückel's $4n+2$ rule of aromaticity (210)
- Walsh diagrams (225)
- Born-Oppenheimer Approximation (228)
- Hellmann-Feynman theorem (229)
- Computational quantum chemistry (232)
- Hartree-Fock-Roothaan self-consistent-field (SCF) method for polyatomic molecules (234)
 - The Pariser-Parr-Pople approximation (235)
 - Configuration interaction (236)
- Semi-empirical and ab initio methods (236)
 - Extended Hückel theory (EHT) (236)
 - Semi-empirical SCF theory (238)
- Density-functional theory (DFT) (239)
 - Time-dependent perturbation theory (TDPT) (242)
- Review Questions (246)

4. Group Theory Part I : Basic Concepts 247-266

- Symmetry elements and symmetry operations (247)
- Group postulates (249)
- Types of groups (249)
- Other definitions (250)
- Point groups (250)

(ii)

- Representations of molecular point groups (251)
- Great orthogonality theorem (G.O.T.) (253)
- Important properties of irreps (253)
- Use of G.O.T. to construct character tables for molecular point groups (254)
- Character tables for point groups (255)
- Crystallographic symmetry (261)
- Crystal Systems (262)
- Molecular symmetry and crystallographic symmetry (265)
- Quasicrystals (265)
- Problems (265)

5. Group Theory Part II : Applications 267-311

- Decomposing a reducible representation into irreducible representations (267)
 - Group theory and normal modes of vibrations in polyatomic molecules (268)
 - Procedure for determining the irreducible representations of the vibrational modes in nonlinear molecules (270)
 - Normal modes of vibration of H_2O molecule (270)
 - Normal modes of vibration of NH_3 molecule (272)
 - Normal modes of vibration of BF_3 molecule (272)
 - Direct products of irreducible representations (275)
 - Selection rules for atomic spectra (278)
 - Use of group theory in determining the selection rules for the $n \rightarrow \pi^*$ and $\pi \rightarrow \pi^*$ transitions in formaldehyde (279)
 - Use of group theory in constructing hybrid orbitals in simple molecules (282)
 - Use of group theory in factoring the secular equation in MOT (285)

Trans 1,3-Butadiene, (285)

Benzene (289)
 - Use of projection operators to determine SALCs (292)
- Miscellaneous solved examples (294)
- Problems (301)

6. Molecular Spectroscopy - I 302-352

- What is spectroscopy ? (302)
- Basic features of spectrometers (302)
- Width and intensity of spectral lines (304)
- Molecular spectra (305)
- Rotational (microwave) spectra of diatomic molecules (307)
- Relative intensities of rotational spectral lines (311)
- Applications of Microwave spectroscopy (312)
- Rotational spectra of polyatomic molecules (313)
- Stark effect in microwave spectra (314)
- Other applications of microwave spectra (314)

Vibrational spectra of diatomic molecules	(315)
Rotation-vibration spectra of diatomic molecules	(319)
Vibrational spectra of polyatomic molecules	(320)
Rotation-vibration spectra of polyatomic molecules	(324)
Vibrational frequencies of different functional groups	(324)
Raman spectroscopy	(326)
Quantum theory of Raman scattering	(326)
Classical theory of Raman scattering	(327)
Rotational Raman spectrum of a diatomic molecule	(328)
Rotation-vibration Raman spectrum	(329)
Experimental Raman spectroscopy	(329)
Resonance Raman spectroscopy	(331)
Laser Raman spectroscopy	(332)
Electronic spectra	(335)
Franck-Condon principle	(335)
Electronic spectra of polyatomic molecules	(337)
Charge transfer spectra	(340)
Electronic spectra of transition metal complexes	(341)
Energy level diagram for an octahedral transition metal complex ion	(342)
Jahn-Teller distortion	(343)
Metal-metal transitions (d-d bands)	(343)
Charge-transfer bands	(344)
Electronic spectra of lanthanides and actinides	(345)
Electronic spectra of conjugated molecules	(345)
Miscellaneous solved examples in spectroscopy	(347)
Review Questions and Problems	(350)

7. Molecular Spectroscopy - II (NMR, ESR, NQR, NRF And PES) 353-430

Magnetic resonance spectroscopy	(353)
NMR spectroscopy	(353)
NMR of a bare proton	(355)
Experimental technique of NMR spectroscopy	(357)
Chemical shift	(358)
Shielding mechanism in NMR	(360)
Nuclear spin-spin interaction : Fine structure in NMR	(362)
Chemical shift-equivalent and magnetically equivalent nuclei	(364)
Mechanism of nuclear spin-spin interaction	(367)
Complex NMR spectra	(369)
NMR spectra of other nuclei	(369)
Fourier-Transform NMR spectroscopy	(370)
Relaxation processes in magnetic resonance	(371)

Study of hindered rotation by NMR spectroscopy	(373)
--	-------

Nuclear magnetic double resonance	(374)
Special topics in nuclear magnetic resonance	(375)
1. Quantum mechanical description of the NMR spectrum of an AB spin system	(375)
2. Two-dimensional NMR spectroscopy	(380)
3. NMR spectra of solids	(380)
4. Double resonance	(381)
5. The nuclear Overhauser effect (NOE)	(381)
6. Off-resonance proton decoupling	(382)
7. Applications of 2D NMR	(382)
8. Internuclear double resonance (INDOR)	(385)
9. Simplification of complex NMR spectra	(385)
10. NMR of paramagnetic compounds	(387)
11. Chemically induced dynamic nuclear polarization (CIDNP)	(388)
12. NMR of liquid crystals	(389)

Magnetic Resonance Imaging (MRI) (390)

Electron spin resonance (ESR) spectra (392)

 ESR spectrum of an unpaired electron (392)

 Hyperfine structure in ESR spectra (393)

 g-factor (396)

 Applications of ESR spectra (397)

ESR of anisotropic systems (399)

 1. g-factor and hyperfine splittings (399)

 2. Kramers' degeneracy and ZFS (401)

 3. ESR of Transition metal complexes (402)

 4. Multiple resonance techniques in ESR (406)

Spin Hamiltonian (410)

Mössbauer spectroscopy (412)

 Basic principle of NRF (412)

 Mössbauer experiment (414)

 More about Mössbauer spectroscopy (414)

 1. Chemical isomer shift (414)

 2. Nuclear quadrupole splitting (414)

 3. Nuclear Zeeman splitting (415)

Photoelectron spectroscopy (PES) (416)

Nuclear quadrupole resonance (NQR) spectroscopy (420)

 Zeeman effect in NQR spectra (425)

 Townes-Dailey theory of NQR coupling (426)

 Applications of NQR spectroscopy (427)

Review Questions and Problems (429)

8. Electric and Magnetic Properties of Molecules 431-449

Electric properties of molecules	(431)
Polarization of a molecule in an electric field	(431)
Clausius-Mosotti equation	(432)
Debye equation	(433)
Dependence of polarizability on frequency	(436)

- Bond moments (440)
- Dipole moments and molecular structure (440)
- Group moments (441)
- Magnetic properties of molecules (442)
 - Molecular interpretation of diamagnetism and paramagnetism (444)
 - Measurement of magnetic susceptibility (447)
 - Ferromagnetism and antiferromagnetism (448)
- Review Questions and Problems (449)

9. The Gaseous State Part I : Ideal Gases

450-478

- Kinetic molecular theory of gases (450)
 - Pressure of an ideal gas (450)
 - Derivation of the gas laws (451)
 - Ideal gas equation (452)
 - Kinetic energy and temperature (453)
- Maxwell distribution of molecular velocities (454)
- Maxwell distribution of molecular energies (455)
- Types of molecular velocities (456)
- Derivation of expressions for molecular velocities (457)
- Expansivity and compressibility (460)
- Collision parameters (461)
 - Collision diameter (461)
 - Collision cross-section (461)
 - Collision number (461)
 - Collision frequency (462)
 - Mean free path (462)
- Transport properties (463)
 - Thermal conductivity (465)
 - Viscosity (467)
 - Diffusion (470)
 - Summary of transport properties in a gas (471)
- Degrees of freedom of a gaseous molecule (472)
- The principle of equipartition of energy (474)
- Contributions to heat capacity of an ideal gas (475)
- The Barometric formula (477)
- Review Questions and Problems (478)

10. The Gaseous State Part II : Real Gases

479-498

- Deviations of real gases from ideal behaviour (479)
 - Explanation of the deviations (480)
- Equations of state for real gases (481)
 - van der Waals equation of state (481)
 - Other equations of state (484)
 - Virial equation of state (486)
- Intermolecular forces (487)
 - Lennard-Jones (6-12) potential (488)

(iv)

- Second virial coefficient (488)
- Critical phenomena (489)
 - The P-V isotherms of carbon dioxide (490)
 - van der Waals equation and critical state (491)
 - Law (principle) of corresponding states (492)
- Molar mass and density of a real gas (495)
- Liquefaction of gases (495)
- Production of low temperatures by adiabatic demagnetization (496)
- Review Questions and Problems (498)

11. The Liquid State : Physical Properties

Liquids

499-514

- Gaseous, liquid and solid states (499)
- Vacancy theory of liquids (499)
- Free volume of a liquid (500)
- Physical properties of liquids (500)
 - Vapour pressure (500)
 - Surface tension (502)
 - Kelvin equation for vapour pressure of a droplet (506)
 - Excess pressure in a drop (506)
 - Laplace equation and the Young-Laplace equation (507)
 - Surface active agents (507)
 - Viscosity (508)
 - Effect of temperature on viscosity (509)
 - Reynolds number (509)
 - Refraction (510)
 - Optical activity (511)
 - ORD and CD (512)
 - Structure of liquids (512)
 - Review Questions and problems (514)

12. Liquid Crystals : The Mesomorphic State

516-524

- Liquid crystals (516)
- Vapour pressure-temperature diagrams (517)
- Thermography (518)
- LCDs and the seven segment cell (518)
- Classification of Thermotropic liquid crystals (520)
 - Smectic liquid crystals (520)
 - Nematic liquid crystals (521)
 - Cholesteric liquid crystals (521)
 - Disc shaped liquid crystals (522)
 - Polymer liquid crystals (522)
- Polymorphism in thermotropic liquid crystals (522)
- Pressure-induced mesomorphism (523)
- Molecular arrangements in various states of liquid crystals (524)
- Review Questions (524)

13. The First Law of Thermodynamics 525-551

- Importance of thermodynamics (525)
- Limitations of thermodynamics (525)
- Some basic terms used in thermodynamics (525)
- Thermodynamic equilibrium (526)
- Extensive and intensive properties (527)
- Thermodynamic processes (527)
- Nature of work and heat (528)
- The first law of thermodynamics (528)
- Internal energy (529)
- State functions, exact and inexact differentials (530)
 - Euler reciprocal relation (531)
 - The cyclic rule (532)
- Enthalpy (533)
- Heat capacity (534)
 - Relation between C_p and C_v (535)
- Expansion of an ideal gas and changes in thermodynamic properties (535)
 - A. Isothermal expansion (535)
 - B. Adiabatic expansion (538)
 - Final temperatures in reversible and irreversible adiabatic expansions (538)
 - Comparison of isothermal and adiabatic expansions (542)
- Reversible isothermal expansion of a real gas (543)
- Joule-Thomson effect (545)
 - Joule-Thomson coefficient in an ideal gas (546)
 - Joule-Thomson coefficient in a real gas (547)
- Zeroeth law of thermodynamics (549)
- Absolute temperature scale (549)
- Review Questions and Problems (550)

14. Thermochemistry 552-570

- Change of internal energy in a chemical reaction (552)
- Change of enthalpy in a chemical reaction (552)
- Exothermic and endothermic reactions (552)
- Relation between heats of reaction at constant volume and at constant pressure (553)
- Standard enthalpy changes of reactions (555)
- Determination of enthalpies of reactions (558)
- Variation of enthalpy of a reaction with temperature: The Kirchhoff equation (560)
- Flame and explosion temperatures (562)
- Hess's law of constant heat summation (563)
 - Applications of Hess's law (564)
- Measuring the enthalpy of combustion (565)
- Bond energies (567)

- Applications of bond energies (568)
- Review Questions and Problems (569)

15. The Second Law of Thermodynamics 571-608

- Limitations of the first law : Need for the second law (571)
- Spontaneous or irreversible processes (571)
- Cyclic process (572)
- Carnot cycle (572)
- The second law of thermodynamics (574)
 - Carnot theorem (574)
 - Concept of entropy (575)
- Entropy change in an isothermal expansion of an ideal gas (577)
- Entropy changes in reversible and irreversible processes (577)
- Entropy changes accompanying changes of phase (578)
- Calculation of entropy changes of an ideal gas with change in P , V and T (580)
- Entropy of mixing of ideal gases (582)
- Standard entropies (583)
- Physical significance of entropy (584)
- Work and free energy functions (584)
- Variation of free energy with T and P (586)
- Maxwell's relations (586)
- Criteria for reversible and irreversible processes (589)
- Gibbs-Helmholtz equation (590)
- Thermodynamics of open systems : Partial molar properties (591)
 - Chemical potential (592)
 - Gibbs-Duhem equation (592)
- Variation of chemical potential with temperature (593)
- Variation of chemical potential with pressure (593)
- Chemical potential in a system of ideal gases (593)
- Determination of partial molar quantities (595)
- Clapeyron equation (597)
- Clapeyron-Clausius equation (598)
- Applications of the Clapeyron-Clausius equation (600)
- Fugacity and activity (601)
- Determination of fugacity of a gas (602)
- Fugacity of a gas in a gaseous mixture (605)
- Fugacity of a liquid component in a solution (605)
- Concept of activity (605)
- Activity coefficient (606)
- Standard states (606)
- Review Questions and Problems (607)

16. The Third Law of Thermodynamics**609-619**

- Nernst heat theorem (609)
- Third law of thermodynamics (610)
- Determination of absolute entropies (610)
- Experimental verification of the third law (615)
- Entropies of real gases (615)
- Entropy changes in chemical reactions (617)
- The Boltzmann entropy equation (618)
- Residual entropy (618)
- Review Questions and Problems (619)

17. Chemical Equilibria**620-660**

- Spontaneous reactions (620)
- Standard free energy change (621)
- Chemical equilibrium (624)
- Law of mass action (624)
- Thermodynamic derivation of the law of mass action (624)
- van't Hoff reaction isotherm (626)
- Relations between K_p , K_c and K_x (626)
- De Donder's treatment of chemical equilibria (628)
- Thermodynamic relations for chemical affinity (629)
- Homogeneous Equilibria (630)
- Temperature-dependence of the equilibrium constant : The van't Hoff equation (637)
- Integrated form of the van't Hoff equation (638)
- Pressure - dependence of equilibrium constant (640)
- Heterogeneous equilibria (642)
- Equilibrium constants for reactions involving real gases (645)
- Le Chatelier's principle (646)
- Linear free energy relationships (LFERs) (648)
- Hammett Equation (648)
- Hammett equation as LFER (651)
- Reaction mechanisms and the Hammett equation (652)
- Taft equation (654)
- Biochemical equilibria (654)
- ATP and its role in bioenergetics (654)
- Binding of oxygen by myoglobin and hemoglobin (657)
- Review Questions and Problems (659)

18. Phase Equilibria

- Phase (661)
- Components (661)
- Degree of freedom (663)
- Conditions for equilibrium between phases (663)
- The Gibbs phase rule (665)
- The Derivation of the phase rule (665)
- One-component systems (667)
 - Water system (668)
 - Carbon dioxide system (671)
 - Sulphur system (672)
- Some typical solved examples for one-component systems (675)
 - Liquid helium system (678)
- High pressure phase diagrams (678)
 1. Water system (678)
 2. Carbon system (679)
- Two-component systems (679)
 - Type A. Simple eutectic systems (679)
 - Thermal analysis : cooling curves (681)
 - Lead-silver system (682)
 - Bismuth-cadmium system (683)
 - Potassium iodide-water system (683)
 - Freezing mixtures (685)
 - Type B. Systems in which two components form stable compound (685)
 - Formation of compounds with congruent melting points (686)
 - Formation of compounds with incongruent melting points (687)
 - Calculation of eutectic point and eutectic composition (688)
 - Typical solved examples for two-component systems (688)
- Three-component solid-liquid systems (690)
 - Acetic acid-chloroform-water system (690)
 - Three-component systems consisting of two salts and water (691)
- The Ehrenfest classification of phase transitions (691)
- Review Questions and Problems (695)

19. The Nernst Distribution Law**696-705**

- Nernst Distribution law (696)
 - Thermodynamic derivation (698)
 - Association of the solute in one of the solvents (698)
 - Dissociation of the solute in one of the solvents (700)
 - Solute enters into chemical combination with one of the solvents (700)

- Applications of the distribution law (701)
- Study of complex ions (701)
- Solvent extraction (702)
- Review Questions and Problems (705)

20. Ionic Equilibria 706-749

- Acids and bases (706)
 - Arrhenius concept (706)
 - Brønsted-Lowry concept (706)
 - Lewis concept (710)
- Dissociation of weak acids and bases (712)
 - Dissociation of a weak acid (712)
 - Dissociation of polybasic acids (713)
 - Dissociation of a weak base (714)
- Dissociation of water (715)
- pH scale (716)
- Some other logarithmic expressions (718)
- Common ion effect (719)
- Buffer solutions (720)
- Buffer mixture of a weak acid and its salt (721)
- Calculation of pH values of buffer mixtures :
 - Henderson-Hasselbalch equation (722)
- Buffer mixture of a weak base and its salt (724)
- Hydrolysis of salts (724)
 - Salts of weak acids and strong bases (725)
 - Salts of weak bases and strong acids (727)
 - Salts of weak acids and weak bases (728)
 - Determination of degree of hydrolysis (730)
- Acid-base indicators (733)
 - Action of phenolphthalein (734)
 - Action of methyl orange (734)
- Acid-base titrations and use of indicators (735)
- Mathematical treatment of acid-base titrations (736)
- Solubility product (740)
- Applications of solubility product principle (742)
- Ionic equilibria involving complex ions (746)
- Review Questions and Problems (748)

21. Solutions of Non-Electrolytes 750-777

- Solutions of liquids in liquids (750)
- Raoult's law (752)
- Vapour pressures of ideal solutions (753)
- Activity of a component in an ideal solution (756)
- Chemical potentials of ideal and Non-ideal solutions. (756)
- Gibbs-Duhem-Margules equation (757)
- Temperature-dependence of vapour pressure of a solution (759)
- Thermodynamics of ideal solutions (759)

Free energy change of mixing for an ideal solution (759)

Volume change and enthalpy change of mixing for an ideal solution (760)

Entropy change of mixing for an ideal solution (761)

Vapour pressures of non-ideal solutions (763)

Vapour pressure-composition and boiling point-composition curves of completely miscible binary solutions (764)

Fractional distillation of binary liquid solutions (766)

Azeotropic mixtures (766)

TheLever rule and fractional distillation (768)

Distillation of immiscible liquids (768)

Solubility of partially miscible liquids (770)

UCST and LCST (771)

Phenol-water system (772)

Aniline-hexane system (772)

Triethylamine-water system (772)

Nicotine-water system (773)

Solutions of gases in liquids (773)

Factors influencing solubility of a gas (773)

Henry's law (774)

Henry's law and Raoult's law (775)

Review Questions and Problems (776)

22. Colligative Properties of Dilute Solutions 778-800

- Colligative properties (778)
 - Vapour pressure lowering (778)
 - Osmosis and osmotic pressure (781)
 - Determination of molar mass from osmotic pressure measurements (783)
 - Relation between osmotic pressure and vapour pressure lowering of an ideal solution (784)
 - Theories of semi-permeability (785)
 - Effects of osmosis and semi-permeability (786)
 - Reverse osmosis (786)
 - Boiling point elevation (788)
 - Freezing point depression (792)
 - Abnormal Results and the van't Hoff factor (796)
- Review Questions and Problems (799)

23. Electrochemistry Part I : Electrolytic Conductance and Transference 801-834

- Electrolytic conductance (801)
 - Specific conductance (801)
 - Equivalent conductance (801)
 - Molar conductance (802)
- Variation of molar conductance with dilution (803)

- Ionic mobility (804)
- Hittorf's theoretical device (805)
- Transport number (806)
- Determination of transport numbers (807)
 - Hittorf's method (807)
 - Moving boundary method (809)
- Kohlrausch's law (810)
- Calculation of molar ionic conductance (810)
- Relation between molar ionic conductance and ionic mobility (812)
- Determination of ionic mobility (814)
- Applications of Kohlrausch's law (815)
- Diffusion and ionic mobility (816)
- Applications of conductance measurements (818)
 - Conductometric titrations (821)
 - Precipitation titrations (822)
- Ostwald's dilution law (822)
- Debye-Hückel theory of strong electrolytes (824)
- Activity coefficients of electrolytes (827)
- Ionic strength (829)
- Debye-Hückel theory of mean activity coefficients of strong electrolytes (830)
 - Debye-Hückel Limiting Law (DHLL) (832)
- Review Questions and Problems (833)

24. Electrochemistry Part II : Electromotive Force of Galvanic Cells 835—881

- Galvanic cells (835)
- Reversible electrodes (836)
- Single electrode potential (838)
- Thermodynamics of reversible electrodes and cells (840)
- Nernst equation (844)
- Standard electrode potentials : The Electrochemical series (846)
- Electromotive force of galvanic cells (848)
- Activity and mean ionic activity of electrolytes (852)
- Concentration cells (853)
 - Electrode-concentration cells (853)
 - Electrolyte-concentration cells (855)
- Types of electrolyte concentration cells (857)
 - Concentration cells without transference (857)
 - Concentration cells with transference (859)
- Liquid junction potential (860)
- Fuel cells (862)
- Applications of EMF measurements (865)
 1. Determination of activity coefficients of electrolytes (865)
 2. Determination of transport numbers (867)

3. Determination of valency of ions in double layer
4. Determination of solubility product constant
5. Determination of pH (869)
- Potentiometric titrations (872)
 1. Acid-base titrations (872)
 2. Redox titrations (875)
 3. Precipitation titrations (878)
- Oxidation-reduction indicators (879)
- Review Questions and Problems (880)

25. Electrochemistry Part III : Electrified Interfaces, etc. 882—925

- I. Debye-Hückel theory of activity coefficients of strong electrolytes (882)
 - Determination of solute activities from solvent activities
 - Dependence of electrolyte activity on the hydration number (886)
 - Bjerrum's theory of ion association in electrolyte solutions (887)
 - Determination of interfacial tension of mercury as a function of potential across the interface (891)
- II. Electrified interfaces (892)
 - A. Quantitative thermodynamic treatment of electrified interfaces (892)
 - Determination of the surface excess (895)
 - B. Structures of the electrified interfaces (898)
 1. Helmholtz-Perrin model (899)
 2. Gouy-Chapman diffuse charge model of the double layer (900)
 3. Stern model (902)
 - C. Structure of semiconductor interfaces (904)
 - Garrett-Brattain space charge inside an intrinsic semiconductor (905)
- III. Electrocatalysis (909)
 - Mechanism of electrocatalysis (909)
 - Volcanoes (910)
- IV. Kinetics of electrode reactions (911)
 - Kinetics of an electrode reaction (912)
 - Butler-Volmer equation (914)
 - Diffusion overpotential (916)
- V. Irreversible electrode processes (917)
 1. Overvoltage (917)
 - Corrosion and its inhibition (918)
 2. Polarography (919)
 - Ilkovic equation and its derivation from Fick's laws of diffusion (923)
 - Half-wave potential (925)

Applications of polarography (926)

Amperometric titrations (929)

VI. Bioelectrochemistry (930)

Electrochemical mechanisms of the nervous system (931)

Review Questions (933)

26. Statistical Thermodynamics 935-988

Statistical thermodynamics (935)

Types of statistics (935)

Maxwell-Boltzmann statistics (936)

Bose-Einstein statistics (938)

Fermi-Dirac statistics (939)

Evaluation of Lagrange's undertermined multipliers (940)

Molecular partition function for an ideal gas (942)

Translational partition function (943)

Rotational partition function (945)

Vibrational partition function (946)

Electronic partition function (948)

Nuclear partition function (951)

Thermodynamic properties in terms of the partition function (951)

Thermodynamic properties of an ideal monatomic gas (953)

Thermodynamic properties of an ideal diatomic gas (954)

Rotational partition function of homonuclear diatomic molecules and the nuclear spin (956)

Statistical thermodynamics of ortho- and para-hydrogen (958)

Application of BE statistics to black body radiation (960)

Quantum statistics : ideal Bose-Einstein gas (963)

a. Bose-Einstein distribution (963)

b. Bose-Einstein condensation (964)

c. Thermodynamic properties of an ideal BE gas (967)

Quantum statistics : ideal Fermi-Dirac gas (969)

a. Fermi-Dirac distribution (969)

b. Thermodynamic properties of an ideal FD gas (973)

Molar partition function of a system (976)

Partition function for a real gas (977)

Equilibrium constant of an ideal gas reaction in terms of partition functions (977)

Heat capacities of monatomic crystals (982)

The Einstein theory of heat capacities (982)

The Debye theory of heat capacities (983)

Review Questions and Problems (986)

27. Classical Statistical Mechanics 989-1032

Phase space, ensembles and ensemble average (989)

Postulate of equal a priori probability in classical statistical mechanics (992)

Microcanonical ensemble (993)

Entropy of a perfect gas using the classical microcanonical ensemble (994)

Entropy of mixing of ideal gases and the Gibbs paradox (995)

Quantum statistical mechanics (996)

Quantal microcanonical ensemble (998)

Quantization of phase space and calculation of number of microstates $\Omega(N, V, E)$ accessible to a system (1000)

Validity of the classical limit of statistical mechanics (1001)

System of identical particles and symmetry of wave functions (1002)

Entropy and probability (1004)

Canonical ensemble (1004)

Classical canonical distribution (1005)

Canonical partition function and thermodynamic quantities (1006)

Application of the classical canonical distribution to an ideal gas (1007)

Law of equipartition of energy (1009)

Quantal canonical distribution (1010)

Grand canonical ensemble (1011)

Grand canonical partition function and thermodynamic quantities (1013)

Quantal grand canonical distribution (1014)

Fluctuations in various ensembles (1015)

1. Canonical ensemble (1015)

2. Grand canonical ensemble (1016)

Comparison of various ensembles (1017)

Liquid helium (1018)

Two-fluid model for liquid helium II: London-Tisza Theory (1019)

Landau theory of liquid helium (1022)

Statistical mechanics of Imperfect gases (1026)

Evaluation of the second virial coefficient (1029)

Derivation of the van der Waals equation for a gas from the virial equation (1030)

Review Questions (1031)

28. Chemical Kinetics 1033-1111

Experimental methods for studying kinetics of reactions (1033)

Rate of reactions (1034)

Rate law and the rate constant (1035)

Order of a reaction (1035)
 Units of rate constant (1037)
 Integration of rate expressions (1038)
 First-order reactions (1038)
 Second-order reactions (1042)
 Third-order reactions (1045)
 Zero-order reactions (1047)
 Half-life time of a reaction (1047)
 Methods of determining order of a reaction (1051)
 Order and molecularity of reactions (1052)
 Mechanisms of complex reactions (1053)
 Collisions and encounters (1054)
 Effect of temperature on reaction rates (1056)
 Effect of a catalyst (1057)
 Arrhenius equation (1058)
 Theories of reaction rates (1060)
 Collision theory of bimolecular gaseous reactions (1060)
 Activated complex theory (ACT) of bimolecular gaseous reactions (1063)
 Eyring equation (1065)
 Statistical mechanical derivation of the rate constant using TST (1067)
 Theories of unimolecular gaseous reactions (1070)
 1. Lindemann theory (1070)
 2. Hinshelwood theory (1073)
 3. RRK theory (1074)
 4. RRKM theory (1077)
 Kinetics of complex reactions (1079)
 1. Opposing or reversible reactions (1079)
 2. Kinetics of consecutive reactions (1081)
 3. Kinetics of chain reactions (1082)
 4. Kinetics of branched chain reactions (1085)
 Kinetics of reactions in solution (1086)
 Diffusion-controlled reactions in solution (1087)
 Debye-Smoluchowski equation (1087)
 Influence of ionic strength on rates of reactions (1088)
 Influence of solvent on reaction rates (1090)
 Reactions in flow systems (1090)
 Kinetics of fast reactions (1093)
 Flow methods for fast reactions (1095)
 Pulse methods (1096)
 Flash photolysis (1096)
 Pulse radiolysis (1097)
 Molecular reaction dynamics (1097)
 Potential energy surfaces (1099)
 Theoretical calculation of the rate constant (1102)
 Electron-transfer reactions : The Marcus theory (1105)
 Dynamics of electron tunnelling in the Marcus theory (1107)

(A)

The Marcus cross relation (1109)
 Review Questions and Problems (1110)

29. Photochemistry

Consequences of light absorption : The Beer-Lambert diagram (1113)
 Beer-Lambert law (1115)
 Laws of photochemistry (1118)
 Grotthus-Draper law (1118)
 Stark-Einstein law of photochemical equivalence (1118)
 Quantum yield (1118)
 Determination of quantum yields (1119)
 Photochemical reactions (1123)
 Photochemical rate law (1124)
 Kinetics of photochemical reactions (1125)
 Kinetics of hydrogen-chlorine reaction (1125)
 Kinetics of hydrogen-bromine reaction (1126)
 Kinetics of decomposition of HI (1127)
 Kinetics of the anthracene reaction (1128)
 Ozone layer in the stratosphere (1129)
 Energy transfer in photochemical reactions : Photosensitization and quenching (1131)
 Quenching of fluorescence : The Stern-Volmer equation (1133)
 Chemiluminescence (1134)
 Rates of intramolecular photophysical processes and intermolecular energy transfer (1135)
 Electronic spectra and photochemistry (1137)
 The oscillator strength (1138)
 Geometry of excited states (1138)
 The laser and the maser (1139)
 Applications of the lasers in chemistry (1143)
 Femtosecond transition state spectroscopy (1145)
 Review Questions and Problems (1146)

30. Catalysis

1147-1164

Characteristics of catalytic reactions (1148)
 Acid-base catalysis (1148)
 Enzyme catalysis (1150)
 Mechanism and kinetics of enzyme-catalysed reactions (1150)
 The Michaelis-Menten equation (1151)
 Effect of temperature on enzyme catalysis (1154)
 Heterogeneous catalysis : Surface reactions (1155)
 Kinetics of surface reactions (1155)
 Unimolecular surface reactions (1155)
 Bimolecular surface reactions (1158)
 pH-dependence of rate constants of catalyzed reactions (1159)
 Autocatalysis and oscillatory reactions (1161)
 Review Questions (1162)

31. The Solid State**1165-1212**

- Difference between crystalline and amorphous solids (1165)
- Symmetry in crystal systems (1166)
- Point groups and space groups (1168)
- Space lattice and the unit cell (1169)
- Bravais lattices (1169)
- Seven crystal systems (1170)
- Lattice energy of an ionic crystal (1173)
- Born-Landé equation and the Born-Haber cycle (1174)
- Law of rational indices (1175)
- Miller indices (1175)
- Interplanar spacing in a crystal system (1175)
- X-ray diffraction (1176)
 - The Bragg equation (1176)
- Experimental methods : The rotating crystal and the powder (The Debye-Scherrer) techniques (1177)
- X-ray diffraction pattern for a cubic system (1180)
- X-ray diffraction pattern for tungsten crystal (1181)
- Fourier synthesis of electron density in a crystal (1183)
- Patterson synthesis (1184)
- Electron diffraction (1186)
- Neutron diffraction (1187)
- Types of crystals (1188)
 - Molecular crystals (1188)
 - Covalent crystals (1189)
 - Ionic crystals (1189)
- Characteristic structures of ionic crystals (1190)
- Metallic crystals (1193)
- Free electron model of metals (1194)
- Band theory of solids (1197)
- Energy band theory of conductors, semiconductors and insulators (1199)
- Superconductivity (1202)
 - LTSC and HTSC (1202)
- Imperfections in a crystal (1204)
- Point defects (1204)
 - Schottky defects (1204)
 - Frenkel defects (1206)
 - Colour centres (1207)
 - Line defects : Dislocations (1208)
 - Imperfections due to transient atomic displacement (1209)
- Quasicrystals (1209)
- Review Questions and Problems (1211)

32. The Colloidal State**1213-1250**

- The colloidal systems (1213)
- Preparation of lyophobic colloidal solutions (1213)
 - A. Dispersion methods (1213)
 - B. Condensation methods (1215)

- Purification of colloidal solutions (1216)
- Properties of colloidal systems (1216)
- Properties of hydrophobic colloidal systems (1218)

- I. Electrical properties (1218)
 - Charge on colloidal particles (1218)
 - The electrical double layer (1219)
 - DLVO theory of the stability of lyophobic colloids (1221)
 - Coagulation of colloidal solutions (1222)
- II. Electrokinetic properties (1224)
 - Electrophoresis (1224)
 - Electro-osmosis (1225)
- Determination of size of colloidal particles (1225)
- Surfactants (Surface-active agents) (1226)
- Hydrophile-Lipophile balance (HLB) (1228)
- Micelle formation (1229)
 - The mass action model and the phase separation model (1229)
 - Shape and structure of micelles (1231)
 - Micellar aggregation numbers (1232)
 - Critical micelle concentration (CMC) (1233)
 - Factors affecting CMC in aqueous media (1234)
 - Thermodynamic approach to CMC (1236)
 - Thermodynamics of micellization (1237)
- Solubilization (1238)
 - Location of solubilizates in micelles (1239)
 - The phase rule of solubilization (1240)
- Micellar catalysis (1240)
- Emulsification by surfactants (1242)
 - Macroemulsions (1242)
 - Factors determining stability of emulsions (1243)
 - Microemulsions (1245)
 - Theories of emulsions (1246)
- The selection of surfactants as emulsifying agents (1246)
- Gels and their preparation (1247)
- Importance and applications of colloids (1248)
- Review Questions (1250)

33. Surface Chemistry**1251-1272**

- Adsorption by solids (1251)
 - Chemisorption (1251)
 - Applications of adsorption (1252)
 - Adsorption of gases by solids (1252)
 - Factors influencing adsorption (1253)
- The Freundlich adsorption isotherm (1253)
- The Langmuir theory of adsorption (1256)
- The BET theory of multilayer adsorption (1259)
- Derivation of the BET equation (1261)

Types of adsorption isotherms (1263)
 Adsorption from solution (1264)
 The Gibbs adsorption isotherm (1264)
 Insoluble surface films on liquids (1267)
 Modern techniques for investigating surfaces : LEED,
 PES, STM, EXAFS and SEXAFS (1269)
 Review Questions and Problems (1272)

34. Macromolecules 1273-1326

Macromolecules (1273)
 Classification of polymers (1275)
 Polymerization reactions (1276)
 Molar masses of polymers (1277)
 Determination of molar masses of macromolecules
 (1279)
 Viscometry (1279)
 Osmometry (1281)
 Donnan membrane equilibrium (1283)
 Ultracentrifugation (1285)
 The Svedberg equation (1286)
 Light scattering : The Zimm plot (1289)
 Turbidity (1292)
 Diffusion (1293)
 The Stokes-Einstein equation (1294)
 The Einstein-Smoluchowski equation (1294)
 Conformations and configurations of
 macromolecules in solution (1296)
 Kinetics of polymerization (1301)
 Molar mass distribution in step-growth
 (condensation) polymerization (1303)
 Electronically conducting polymers (1306)
 Thermodynamics of polymer solutions : The Flory-
 Huggins theory (1309)
 Helix-random coil transitions in polypeptides (1311)
 Structure of proteins (1312)
 Protein folding and denaturation (1315)
 α -helix and β -pleated sheet structures of
 proteins (1315)
 Hierarchy of protein structure (1317)
 Experimental methods for protein structure
 determination (1318)
 Structure of nucleic acids (1319)
 Polymerase chain reaction (PCR) (1323)
 Separation of proteins and nucleic acids (1324)
 Review Questions and Problems (1325)

35. Mass Spectrometry 1327-1342

Basic theory (1327)
 Dynamics of electron-molecule collisions in mass
 spectrometry (1331)
 Factors influencing fragmentation (1332)
 Evaluation of heats of sublimation of solids (1332)
 Calculation of appearance potentials and ionization
 potentials (1332)
 Fragmentation processes (1333)
 Rearrangements : The McLafferty rearrangement
 (1335)

(xii)

Molar mass determination (1337)
 Finger print application of mass spectra (1341)
 Review Questions (1342)

36. Irreversible Thermodynamics 1343-1362

Phenomenological laws and Onsager's
 relations (1343)
 Conservation of mass and energy in closed
 open systems (1345)
 Entropy production due to heat flow (1348)
 Entropy production in chemical reactions (1349)
 Entropy production and Entropy flow in
 systems (1350)
 Transformation properties of fluxes and forces
 Principle of microscopic reversibility and the
 reciprocal relations (1354)
 Verification of the Onsager relations (1355)
 Electrokinetic effects (1356)
 Stationary non-equilibrium states (1359)
 Applications of irreversible thermodynamics
 biological systems (1360)
 Nonlinear thermodynamics of irreversible processes
 Concluding remarks (1362)
 Review Questions (1362)

Appendices 1363-1378

1. Derivation of the Kelvin Equation (1363)
2. Photosynthesis and Vision (1364)
3. Photobiology and photomedicine (1365)
4. Superconductivity (1366)
5. Low-energy electron diffraction (LEED) (1367)
6. Electron Emission from Surfaces : PES, XPS and AEG
(1368)
7. Scanning Tunneling Microscopy (STM) And atomic
force microscopy (AFM) (1369)
8. Electron Diffraction (1369)
9. Determination of energy distribution in Laser-induced
Fluorescence (1371)
10. Nanoscience and nanomaterials (1372)
11. Surface plasmon resonance (1373)
12. Quantum confined semiconductor structures (1373)
13. Excitation transfer (1375)
14. Siloxane-Arylene and Siloxane-Carborane polymer
Phthalocyanine "Shishkebab" Polymers (1376)
15. Spectroscopic determination of Polymer Structures
(1378)

General Bibliography 1379-1388

Index 1383-1392

Useful Tables (i) - (ii)

Periodical Long Form Table
