

ASIAN STUDENTS EDITION

RELATIONAL DATABASES

Concepts, Selection and
Implementation

A. J. Page

Contents

Introduction	1
PART 1: WHAT IS A DATABASE?	9
1. The Use of Databases	11
The Role of the Database	11
Levels of Database Implementation	12
Level 1 Environment	12
Level 2 Environment	12
Level 3 Environment	12
Level 4 Environment	13
Level 5 Environment	13
The Utilisation of Databases	14
Summary	16
2. What is a Database?	17
File Management	17
The Database Management System	18
To Begin at the Beginning	19
The Three-layered Database	20
The Logical or External Layer	21
The Physical or Conceptual Layer	21
The Native or Internal Layer	22
Summary	23
3. Some DBMS History	25
Database Models	25
The Hierarchical Model	26
The Network Approach	34
Access Languages	39
Summary	41
4. The Relational Model	43
Horses for Courses	43
Third Normal Form Analysis	44

First Normal Form	47	
Second Normal Form	48	
Third Normal Form	48	PA
Turning TNF Output into a Relational Database Model	51	RE
Two Vital Relational Concepts Revisited	52	MA
Relational Structures	54	8. S
Relational Operators	56	Wh
Summary	60	Eas
5. Relational Database Architectures		
Relational Database Aims	61	
The Server Architecture	61	
The Single Server Architecture	62	Th
The One-to-One Client/Server Architecture	62	So
The Multiple Server Architecture	63	
The Oracle Architecture	63	
The Ingres Architecture	65	
Comparing the Two Approaches	69	S
Summary	71	
	71	
6. On-Line Transaction Processing		
Principles of Transaction	73	S
OLTP Characteristics	73	
Hardware Solutions	77	S
Software Solutions	77	
Compiled Transactions	81	
Multi-Volume Tables	81	
Deferred Write	81	
The Benefits of Parallelism	82	
Summary	83	
	85	
7. When is a Database Relational?		
Relational Definition	87	
The Twelve Rules	87	
Rule 1: The information rule	88	
Rule 2: The rule of guaranteed access	88	
Rule 3: The systematic treatment of null values	89	
Rule 4: The database description rule	89	
Rule 5: The comprehensive sub-language rule	89	
Rule 6: The view updating rule	90	
Rule 7: The insert and update rule	90	
Rule 8: The physical independence rule	91	
Rule 9: The logical data independence rule	91	
Rule 10: Integrity independence rule	91	
Rule 11: Distribution rule	92	
Rule 12: No subversion rule	93	
	93	

47		
48	PART 2:	
48	RELATIONAL DATABASE	
51	MANAGEMENT SYSTEMS	95
52		97
54	8. SQL	97
56	Why SQL is Favoured	97
60	Ease of Use	98
	The Data Definition Statements	98
61	The Data Manipulation Statements	99
61	The Data Control Statements	101
62	The Portability Issue	103
62	Some Important SQL Extensions	103
63	Hierarchical Data Structure Support	104
63	Outer Joins	106
65	Correlated Queries	107
69	Some other Anomalies in SQL	107
71	Entity Integrity	108
71	SQL and Duplicate Rows	110
	Upserts	111
73	Summary	113
73		113
77	9. Indexing	113
77	What is an Index?	115
81	The Btree Index	118
81	The ISAM Index	120
81	Row Uniqueness	120
82	Compression	121
83	Fillfactors	121
85	Modify	121
	Hash Organisation	123
87	Bit-mapped Indexing	125
87	Summary	127
		127
	10. Optimisation	131
	The Role of the Optimiser	131
	Join Processing	131
	Cartesian Products	132
	Product Joins	132
	Sort/Merge Joins	133
	Primary Index Look-Up (Nested Joins)	135
	Summary	139
		139
	11. Transaction Management	141
	Basic Principles	141
	How Are Transactions Managed?	

COMMIT and ROLLBACK

The Lost Update

The Uncommitted Dependency Problem

The Inconsistent Analysis Problem

Transactions per Second

Summary

12. Locking

Tackling Concurrency

The Lost Update

The Uncommitted Dependency Problem

The Inconsistent Analysis Problem

Deadlocks

Locking Granularity

Page Level Locking

Row Level Locking

Row Level Locking Supported by Oracle (V5)

Locking Modes

Access Mode

Lock Escalation

Summary

13. Access Control

Selective Security

Operating System Access Control

Database Access Control

Controlling Privilege

Function Control

Data Restrictions

Summary

14. Data Integrity

Integrity Constraints

Domain Constraints

Entity Integrity

Column Constraints

User-defined Integrity Constraints

Referential Integrity

Self-Referencing Tables

Implementing Referential Integrity

The Timing Factor

Summary

15. Auditing

What is Auditing?

Security Auditing

	186
Data Auditing	187
Resource Usage Auditing	188
Summary	189
16. Backup and Recovery	189
When Things Go Wrong ...	191
Recovery Facilities	192
A Recovery Sequence	194
Summary	195
17. Data Dictionaries	195
The Information Providers	197
Dictionary History	198
The Key Elements	200
Summary	201
18. The Distributed Relational Database	201
The Radical Approach	202
Distributed Processing	203
Distributed Database	208
Distributed Optimisation	208
Distributed Transaction Management	209
Distributed Locking	209
Helping the Communications Overhead	211
Homogeneous and Heterogeneous Systems	213
A Different Approach	214
Summary	217
Glossary	225
Index
