<i>Preface to the Third Edition</i>	v
<i>Preface to the First Edition</i>	vii
<i>Units of Measurement</i>	ix
<i>Physical Constants</i>	xiv
<i>Conversion Factors</i>	xv
<b>1. Atoms in Crystals</b>	<b>1</b>
1.1 The Solid State	1
1.2 Periodicity in Crystals	3
1.3 Choice of a Unit Cell	6
1.4 Wigner Seitz Unit Cell	6
1.5 Number of Lattice Points per Unit Cell	7
1.6 Symmetry Elements	10
1.7 Combination of Symmetry Elements (Point Group)	15
1.8 Bravais Lattice in Two Dimensions (Plane Lattice)	16
1.9 Bravais Lattice in Three Dimensions (Space Lattice)	17
1.10 Rational Features of a Crystal and Miller Indices	21
1.11 Interplanar Spacing	31
1.12 Density of Atoms in a Crystal Plane	36
1.13 Some Simple and Common Crystal Structures	42
1.14 Summary	49
1.15 Definitions	50
<b>2. Atomic Bonding</b>	<b>56</b>
2.1 Forces Between Atoms	56
2.2 Ionic Bonding	58
2.3 Bond Dissociation Energy of NaCl Molecule	60
2.4 Cohesive Energy of Ionic Crystals	61
2.5 Evaluation of Madelung Constant for NaCl Structure	71
2.6 Madelung Potential	72
2.7 The Born-Haber Cycle	73
2.8 Covalent Bonding	74
2.9 Metallic Bonding	79
2.10 Hydrogen Bonding	81

2.10	Hydrogen Bonding	81
2.11	Van der Waals Bonding	81
2.12	Summary	82
2.13	Definitions	83

**3. Atomic Packing**

3.1	Packing of Equal Spheres in 2-Dimensions	86
3.2	Packing of Equal Spheres in 3-Dimensions	86
3.3	Close Packing of Equal Spheres in 3-Dimensions	88
3.4	Classification of Close Packings	92
3.5	Axial Ratio and Lattice Constants	93
3.6	Voids in Close Packing	95
3.7	Size and Coordination of Voids	96
3.8	Significance of Voids	97
3.9	Packing of Unequal Spheres in 3-Dimensions and Effect of Radius Ratio	101
3.10	Representation of Close Packings	102
3.11	Pauling's Rule	104
3.12	Application of Pauling's Rule to Actual Structures	106
3.13	Examples of Some Close Packed Structures	107
3.14	Notations: Representing Close Packed Structures	109
3.15	Summary	113
3.16	Definitions	117

**4. Atomic Shape and Size**

4.1	Introduction	120
4.2	Bohr Model of the Hydrogen Atom	120
4.3	Atomic Shape	121
4.4	Wave Mechanical Concept of Atom	123
4.5	Atomic Size	124
4.6	Ionic Radii	126
4.7	Empirical ionic Radii	127
4.8	Variation of Ionic Radii	131
4.9	Covalent Radii	135
4.10	Metallic Radii	138
4.11	Van der Waals Radii	143
4.12	Summary	147
4.13	Definitions	148

**5. Crystal Imperfections**

5.1	Introduction	150
5.2	Point Imperfections	150
5.3	Concentration of Point Imperfections	151

5.4	Line Imperfections	161
5.5	Burgers Vector and Burgers Circuit	164
5.6	Presence of Dislocation	165
5.7	Dislocation Motion	171
5.8	Energy of a Dislocation	176
5.9	Slip Planes and Slip Directions	178
5.10	Perfect and Imperfect Dislocations	181
5.11	Dislocation Reaction	182
5.12	Surface Imperfections	185
5.13	Summary	190
5.14	Definition	191
<b>6.</b>	<b>Atomic Diffusion</b>	<b>194</b>
6.1	Introduction	194
6.2	Fick's First Law	194
6.3	Fick's Second Law	197
6.4	Solution to Fick's Second Law (Constant $D$ )	198
6.5	Some Applications of Diffusion	203
6.6	Diffusion Mechanisms	213
6.7	Random Walk Treatment of Diffusion	217
6.8	The Kirkendall Effect	218
6.9	Diffusion in Alkali Halides	219
6.10	Ionic Conductivity in Alkali Halide Crystal	222
6.11	Diffusion and Ionic Conductivity	224
6.12	Summary	225
6.13	Definitions	225
<b>7.</b>	<b>Lattice (Atomic) Vibrations</b>	<b>228</b>
7.1	Introduction	228
7.2	Dynamics of the Chain of Identical Atoms	229
7.3	Dynamics of a Diatomic Linear Chain	233
7.4	Dynamics of Identical Atoms in Three Dimensions	240
7.5	Experimental Measurements of Dispersion Relation	240
7.6	Anharmonicity and Thermal Expansion	242
7.7	Summary	245
7.8	Definitions	246
<b>8.</b>	<b>Diffraction of Waves and Particles by Crystals</b>	<b>249</b>
8.1	Introduction	249
8.2	X-rays and Their Generation	249
8.3	Moseley's Law	254
8.4	Absorption of X-rays (Classical Theory)	257
8.5	Absorption Edge	260

8.6	X-ray Diffractions	260
8.7	The Laue Equations	262
8.8	Equivalence of Bragg and Laue Equations	265
8.9	Interpretation of Bragg's Equation	266
8.10	Ewald Construction	267
8.11	The Reciprocal Lattice	268
8.12	Reciprocal Lattice to sc, bcc and fcc Lattices	272
8.13	Some Properties of the Reciprocal Lattice	275
8.14	Diffraction Intensity	278
8.15	The X-ray Diffraction Experiments	280
8.16	The Powder Method	281
8.17	Powder Diffractometer	285
8.18	The Laue Method	286
8.19	The Rotation/Oscillation Method	289
8.20	Other Diffraction Methods	292
8.21	Summary	296
8.22	Definitions	297
<b>9.</b>	<b>Thermal Properties of Materials</b>	<b>300</b>
9.1	Introduction	300
9.2	The Specific Heat of Solids	300
9.3	The Classical Model	300
9.4	The Einstein Model	301
9.5	The Density of States	304
9.6	The Debye Model	308
9.7	Thermal Conductivity of Solids	314
9.8	Thermal Conductivity Due to Electrons	315
9.9	Thermal Conductivity Due to Phonons	315
9.10	Thermal Resistance of Solids	316
9.11	Summary	320
9.12	Definitions	321
<b>10.</b>	<b>Free Electrons in Crystals</b>	<b>323</b>
10.1	Introduction	323
10.2	Electrons Moving in a One-Dimensional Potential Well	324
10.3	Three-Dimensional Potential Well	328
10.4	Quantum State and Degeneracy	330
10.5	The Density of States	333
10.6	Fermi-Dirac Statistics	336
10.7	Effect of Temperature on Fermi Distribution Function	337
10.8	The Electronic Specific Heat	340
10.9	The Electrical Conductivity of Metals	342
10.10	Relaxation Time and Mean Free Path	343

10.11	Electrical Conductivity and Ohm's Law	344
10.12	Wiedemann-Franz-Lorentz law	346
10.13	The Electrical Resistivity of Metals	348
10.14	Thermionic Emission	349
10.15	The Hall Effect	352
10.16	Summary	353
10.17	Definitions	355
<b>11.</b>	<b>Band Theory</b>	<b>358</b>
<del>11.1</del>	Bloch Theorem	358
<del>11.2</del>	The Kronig-Penny Model	360
11.3	Construction of Brillouin Zones	365
11.4	Symmetry Properties of the Energy Function	370
11.5	Extended, Reduced and Periodic Zone Schemes	371
11.6	Effective Mass of an Electron	374
<del>11.7</del>	The Nearly Free Electron Model	376
11.8	Tight Binding Approximation	379
11.9	Orthogonalized Plane Wave (OPW) Method	383
11.10	The Pseudopotential Method	386
11.11	Conductors Semiconductors and Insulators	387
11.12	Summary	389
11.13	Definitions	390
<del>12.</del>	<b>The Fermi Surface</b>	<b>392</b>
12.1	Introduction	392
12.2	Fermi Surface and Brillouin Zones	392
12.3	Harrison's Method of Constructing Fermi Surfaces	393
12.4	Fermi Surfaces in Metals	398
12.5	Characteristics of Fermi Surfaces	404
12.6	Effect of Electric Field on FS	404
12.7	Effect of Magnetic Field on FS	406
12.8	Quantization of Electron Orbits	407
12.9	Experimental Study of Fermi Surfaces	412
12.10	Summary	417
12.11	Definitions	419
<b>13.</b>	<b>Semiconducting Properties of Materials</b>	<b>421</b>
13.1	Semiconductors	421
13.2	Free Carrier Concentration in Semiconductors	425
13.3	Fermi Level and Carrier Concentration in Semiconductors	429
13.4	Mobility of Charge Carriers	436
13.5	Effect of Temperature on Mobility	437
13.6	Electrical Conductivity of Semiconductors	438

✓ 13.7	Hall Effect in Semiconductors	441
13.8	Junction Properties	442
13.9	Summary	451
13.10	Definitions	452

#### ★ 14. Dielectric Properties of Materials

14.1	Introduction	455
14.2	Dipole Moment	455
14.3	Polarization	455
14.4	The Electric Field of a Dipole	456
14.5	Local Electric Field at an Atom	457
14.6	Dielectric Constant and its Measurement	458
14.7	Polarizability	461
14.8	The Classical Theory of Electronic Polarizability	463
14.9	Dipolar Polarizability	466
14.10	Piezo-, Pyro- and Ferroelectric Properties of Crystals	468
14.11	Ferroelectricity	472
14.12	Ferroelectric Domain	473
14.13	Antiferroelectricity and Ferrielectricity	475
14.14	Summary	476
14.15	Definitions	476

#### 15. Optical Properties of Materials

15.1	Absorption Process	480
15.2	Photoconductivity	480
15.3	Photoelectric Effect	481
15.4	Photovoltaic Effect	483
15.5	Photoluminescence	487
15.6	Colour Centres	489
15.7	Types of Colour Centres	489
15.8	Generation of Colour Centres	489
15.9	Maser and Laser	491
15.10	Summary	493
15.11	Definitions	499

#### ★ 16. Magnetic Properties of Materials

16.1	Introduction	502
16.2	Response of Substance to Magnetic Field	502
16.3	Classification of Magnetic Materials	503
16.4	Atomic Theory of Magnetism	504
16.5	The Quantum Numbers	505
16.6	The Origin of Permanent Magnetic Moments	507
16.7	Langevin's Classical Theory of Diamagnetism	509

16.8	Sources of Paramagnetism	512
16.9	Langevin's Classical Theory of Paramagnetism	513
16.10	Fundamentals of Quantum Theory of Paramagnetism	514
16.11	Paramagnetism of Free Electrons	516
16.12	Ferromagnetism	518
16.13	The Weiss Molecular (Exchange) Field	518
16.14	Temperature Dependence of Spontaneous Magnetization	519
16.15	The Physical Origin of Weiss Molecular Field	520
16.16	Ferromagnetic Domains	522
16.17	Domain Theory	523
16.18	Antiferromagnetism	525
16.19	Ferrimagnetism and Ferrites	529
16.20	Summary	530
16.21	Definitions	532
<b>17.</b>	<b>Superconductivity</b>	<b>534</b>
17.1	Introduction	534
17.2	Sources of Superconductivity	535
17.3	Response of Magnetic Field	535
17.4	The Meissner Effect	538
17.5	Thermodynamics of Superconducting Transitions	539
17.6	Origin of Energy Gap	542
17.7	Isotope Effect	544
17.8	London Equations	544
17.9	London Penetration Depth	546
17.10	Coherence length	548
17.11	Elements of BCS Theory	549
17.12	Flux Quantization	552
17.13	Normal Tunneling and Josephson Effect	553
17.14	High $T_c$ Superconductivity	555
17.15	Summary	556
17.16	Definitions	558
<b>18.</b>	<b>Anisotropic Properties of Materials</b>	<b>560</b>
18.1	Introduction	560
18.2	Classification of Physical Properties	560
18.3	Description of Physical Properties	562
18.4	Intrinsic Symmetry of Physical Properties	563
18.5	Transformation Law for Second Rank Tensor	564
18.6	Effect of Crystal Symmetry on Physical Properties	567
18.7	Physical Properties of Zero and First Rank Tensors	570
18.8	Physical Properties of Second Rank Tensor	573
18.9	Physical Properties of Third Rank Tensor	576

18.10 Physical Properties of Fourth Rank Tensor	580
18.11 The Strain Energy	581
18.12 Effect of Crystal Symmetry on Elastic Constants	582
18.13 Summary	585
18.14 Definitions	586
