NEW AGE INTERNATIONAL PUBLISHERS

Contents

Foreword
Preface to the Eighth Edition
Preface to the First Edition
Acknowledgements
Elements and their Symbols
Conversion Table
List of Physical Constants with their Units
List of Tables

1. INTRODUCTION

2. REVIEW OF ATOMIC STRUCTURE

I	: The Rutherford Model of the Atom
II	: Conclusion of Rutherford's Theory
III	: Drawbacks of the Rutherford Model of the Atom
IV	: Bohr Model of Atom
V	: Bohr's Theory of Hydrogen Atom
VI	: Total Energy of the Electron in the Stationary Orbits
VII	: Calculation of r_n and E_n for Hydrogen Atom
VIII	: Bohr's Interpretation of Hydrogen Spectrum
IX	: Spectral Series of Hydrogen
X	: Shortcomings of Bohr's Theory
XI	: Sommerfeld's Relativistic Atom Model
XII	: Elliptical Orbits for Hydrogen
XIII	: Total Energy of an Electron in an Elliptical Orbit
XIV	: Sommerfeld's Relativistic Correction
XV	: Fine Structure of H_α Line
XVI	: Drawbacks of Bohr-Sommerfeld Atom Model
XVII	: Vector Atom Model
XVIII	: The Characteristic Quantum Numbers
XIX	: The Pauli's Exclusion Principle
XX	: Application of Pauli's Exclusion Principle
XXI	: Electron Configuration

XXII	: The Periodic Table	30
XXIII	: Wave Mechanical Concept of the Atom	38
•	<i>Objective Questions</i>	39
•	<i>Short Questions</i>	42
•	<i>Review Questions</i>	43
•	<i>Problems</i>	45
3.	INTERATOMIC FORCES AND BONDINGS IN SOLIDS	47
I	: Introduction	47
II	: Forces between Atoms	47
III	: Cohesion of Atoms and Cohesive Energy	48
IV	: Calculation of Cohesive Energy	50
V	: Bonding in Solids	51
VI	: Ionic Bonding	52
VII	: Bond Energy of NaCl Molecule	53
VIII	: Calculation of Lattice Energy of Ionic Crystals	55
IX	: Calculation of Madelung Constant of Ionic Crystals	57
X	: Calculation of Repulsive Exponent from Compressibility Data	59
XI	: The Born-Haber Cycle	62
XII	: Properties of Ionic Solids	64
XIII	: Examples of Ionic Solids	65
XIV	: Covalent Bond	65
XV	: Saturation in Covalent Bonds	68
XVI	: Directional Nature of a Covalent Bond	68
XVII	: Hybridization	70
XVIII	: Properties of Covalent Compounds	71
XIX	: Metallic Bond	72
XX	: Properties of Metallic Crystals	74
XXI	: Intermolecular Bonds	74
XXII	: Dispersion Bonds	74
XXIII	: Dipole Bonds	75
XXIV	: Hydrogen Bonds	76
•	<i>Objective Questions</i>	79
•	<i>Short Questions</i>	81
•	<i>Review Questions</i>	81
•	<i>Problems</i>	83

4. STRUCTURAL STUDY OF CRYSTALLINE SOLIDS	87
I : Introduction	87
II : Lattice Points and Space Lattice	87
III : The Basis and Crystal Structure	88
IV : Unit Cells and Lattice Parameters	89
V : Unit Cell versus Primitive Cell	90
VI : Crystal Systems	90
VII : Crystal Symmetry (Symmetry Elements in Crystals)	92
VIII : The Twenty-three Symmetry Elements in a Cubic Crystal	94
IX : To Show that Five-fold Rotation Axis is not Compatible with a Lattice	97
X : Combination of Symmetry Elements	98
XI : Rotation-Inversion Axis	98
XII : Translation Symmetry Elements	98
XIII : Space Groups	99
XIV : The Bravais Space Lattices	100
XV : Metallic Crystal Structures	100
XVI : Relation between the Density of Crystal Material and Lattice Constant in a Cubic Lattice	110
XVII : Other Cubic Structures	110
XVIII : Directions, Planes and Miller Indices	112
XIX : Important Features of Miller Indices of Crystal Planes	119
XX : Important Planes and Directions in a Cubic Crystal	119
XXI : Distribution of Atoms in the Atomic Planes of a Simple Cubic Crystal	120
XXII : Separation between Lattice Planes in a Cubic Crystal	120
XXIII : Allotropy and Polymorphism	123
XXIV : Imperfections in Crystals	124
XXV : Reciprocal Lattice	137
XXVI : X-ray Diffraction	147
• <i>Objective Questions</i>	148
• <i>Short Questions</i>	151
• <i>Review Questions</i>	152
• <i>Problems</i>	155
5. WAVE NATURE OF MATTER AND X-RAY DIFFRACTION	158
I : Introduction	158
II : The de Broglie Hypothesis	158
III : Relativistic Correction	160
IV : Experimental Study of Matter Waves	161
V : The Davisson-Germer Experiment	161

VI	: Heisenberg's Uncertainty Principle	163
VII	: X-ray Diffraction	165
VIII	: Bragg's Law	166
IX	: Bragg's X-ray Spectrometer	167
X	: Powder Crystal Method	169
XI	: Rotating Crystal Method	170
XII	: Correction for Bragg's Equation	170
•	<i>Objective Questions</i>	172
•	<i>Short Questions</i>	175
•	<i>Review Questions</i>	175
•	<i>Problems</i>	176
6.	ELECTRICAL PROPERTIES OF METALS	180
I	: Introduction	180
II	: Classical Free Electron Theory of Metals	181
III	: Drawbacks of Classical Theory	190
IV	: Relaxation Time, Collision Time and Mean Free Path	194
V	: Quantum Theory of Free Electrons	197
VI	: Classical Wave Equation	198
VII	: Schrödinger's Wave Equation	200
VIII	: Schrödinger's Equation for Stationary States	202
IX	: Importance of Schrödinger Equation	204
X	: Physical Significance of the Wave Function Ψ	205
XI	: Limitations on ψ and Normalisation of Wave Function	206
XII	: The Quantum Mechanics of Simple Problems	207
XIII	: Particles in a Box with Impenetrable Walls	219
XIV	: Fermi-Dirac Statistics and Electronic Distribution in Solids	232
XV	: Density of Energy States and Fermi Energy	233
XVI	: The Fermi Distribution Function	237
XVII	: Heat Capacity of the Electron Gas	239
XVIII	: Mean Energy of Electron Gas at Absolute Zero	240
XIX	: Effect of Temperature on Fermi Distribution Function	241
XX	: Electrical Conductivity from Quantum Mechanical Considerations	249
XXI	: Electron Scattering and Sources of Resistance in Metals	252
XXII	: Electron Scattering Mechanisms and Variation of Resistivity with Temperature	255
XXIII	: Resistivity of Alloys	261
XXIV	: Variation of Resistivity with Pressure	262

XXV	: Thermal Conductivity in Metals	200
XXVI	: Thermal Expansion	201
XXVII	: Mechanical Effects on Electrical Resistance	202
XXVIII	: Conductivity at High Frequencies	203
XXIX	: Joule's Law	204
XXX	: Effect of the Magnetic Fields	205
XXXI	: Thermionic Emission	206
XXXII	: Schottky Effect	207
XXXIII	: Magnetism in Metals	208
XXXIV	: A Note on Selection of Electrical Engineering Materials	209
XXXV	: Failure of Sommerfeld's Free Electron Theory	210
XXXVI	: Band Theory of Solids	211
XXXVII	: Electron in a Periodic Field of a Crystal (The Kronig-Penney Model)	212
XXXVIII	: Brillouin Zones	213
XXXIX	: Number of Possible Wave Functions in a Band	301
XXXX	: Motion of Electrons in a One-dimensional Periodic Potential	302
XXXXI	: Distinction between Metals, Insulators and Intrinsic Semiconductors	303
	• Objective Questions	312
	• Short Questions	314
	• Review Questions	320
	• Problems	321
	• Problems	326
7.	THERMAL PROPERTIES OF SOLIDS	333
I	: Introduction	333
II	: Specific Heat	333
III	: Classical Theory (Dulong and Petit Law)	334
IV	: Einstein's Theory of Specific Heat	340
V	: Debye's Theory	343
	• Objective Questions	352
	• Short Questions	353
	• Review Questions	354
	• Problems	355
8.	SUPERCONDUCTIVITY	356
I	: Historical Introduction	356
II	: A Survey of Superconductivity	357
III	: An Account of the Mechanism of Superconductors	359

IV	: Effects of Magnetic Field	361
V	: A.C. Resistivity	362
VI	: Critical Currents	364
VII	: Flux Exclusion: The Meissner Effect	364
VIII	: Thermal Properties	366
IX	: The Energy Gap	368
X	: Isotope Effect	369
XI	: Mechanical Effects	370
XII	: The Penetration Depth	370
XIII	: Type I and Type II Superconductors	371
XIV	: London Equations: Electrodynamics	373
XV	: Superconductors in A.C. Fields	377
XVI	: Thermodynamics of Superconductors	380
XVII	: A Survey of BCS Theory	382
XVIII	: BCS Theory	385
XIX	: Quantum Tunnelling	389
XX	: Josephson's Tunnelling	390
XXI	: Theory of D.C. Josephson's Effect	391
XXII	: New Superconductors	395
XXIII	: Applications of Superconductivity in Early Days and their Limitations	398
XXIV	: Potential Applications of Superconductivity	402
XXV	: Power Applications of Superconductors	410
•	<i>Objective Questions</i>	420
•	<i>Short Questions</i>	422
•	<i>Review Questions</i>	423
•	<i>Problems</i>	424
9.	MAGNETIC PROPERTIES OF MATERIALS	427
I	: Introduction	427
II	: Magnetic Permeability	428
III	: Magnetisation	429
IV	: Electric Current in Atoms—Bohr Magnetron	430
V	: Electron Spin and Magnetic Moment	432
VI	: Magnetic Moment due to Nuclear Spin	433
VII	: More about the Origin of Magnetism	433
VIII	: Theory of Magnetism in Electrons	436
IX	: Diamagnetism	439

X : Summary

XI : Paramagnetism

XII : Weiss Theory of Paramagnetism

XIII : Paramagnetic Susceptibility of Solid Substances

XIV : Quantum Theory of Paramagnetism

XV : Cooling by Adiabatic Demagnetisation

XVI : Determination of Susceptibilities of Para and Diamagnetic Materials

XVII : Hund Rules

XVIII : Summary

XIX : Ferromagnetism

XX : Spontaneous Magnetisation in Ferromagnetic Materials

XXI : Quantum Theory of Ferromagnetism

XXII : Weiss Molecular Field

XXIII : Behaviour of Ferromagnetic Materials for $T > \theta_f$ (Curie-Weiss Law)

XXIV : Temperature Dependence of Spontaneous Magnetism

XXV : The Internal Field and Exchange Interaction

XXVI ✓ : Ferromagnetic Domains

XXVII : The Domain Model

XXVIII : Domain Theory

XXIX : Experimental Demonstration of the Domain Structure

XXX : Explanation of Hysteresis

XXXI ✓ : Antiferromagnetism

XXXII ✓ : Ferrimagnetism (Ferrites)

XXXIII ✓ : The Structure of Ferrites

XXXIV : Magnetic Materials

- Objective Questions
- Short Questions
- Review Questions
- Problems

10. PHYSICS OF SEMICONDUCTORS

I : Introduction

II : The Band Structure of Semiconductors

III : Semiconductors

IV : Intrinsic Semiconductors

V : Conductivity and Temperature

VI : Statistics of Electrons and Holes in Intrinsic Semiconductors

VII	: Electrical Conductivity	535
VIII	: Impurity Semiconductors or Extrinsic Semiconductors	537
IX	: Statistics of Extrinsic Semiconductors	543
X	: Mechanism of Current Conduction in Semiconductors	558
XI	: Generation and Recombination	560
XII	: Mobility of Current Carriers	565
XIII	: General Study of Excess Carrier Movement	570
XIV	: Hall Effect	575
XV	: Advantages of Semiconductor Devices	579
XVI	: The $p-n$ Junction	580
XVII	: The Potential Barrier at the $p-n$ Junction	585
XVIII	: Width of Depletion Layer of the $p-n$ Junction	586
XIX	: Volt-Ampere Characteristics of the $p-n$ Junction	590
XX	: Application of Voltage Across a $p-n$ Junction	592
XXI	: Rectifier Equation	595
XXII	: Continuity Equation	600
XXIII	: Some Special $p-n$ Junction Diodes	605
•	<i>Objective Questions</i>	609
•	<i>Short Questions</i>	612
•	<i>Review Questions</i>	613
•	<i>Problems</i>	616
11.	DIELECTRICS AND RELATED PROPERTIES	623
I	: Introduction	623
IA	: Review of Basic Formulae	624
II	: The Microscopic Concept of Polarisation	632
III	: Langevin's Theory of Polarisation in Polar Dielectrics	635
IV	: Internal-Field or Local Field in Liquids and Solids	641
V	: Clausius-Mosotti Relation	645
VI	: The Static Dielectric Constant of Solids and Liquids	649
VII	: Ferroelectricity	651
VIII	: Piezoelectricity	660
IX	: Properties of Dielectrics in Alternating Fields	662
X	: The Complex Dielectric Constant and Dielectric Loss	662
XI	: Dielectrics in Alternating Fields	664
XII	: Ionic Polarisability as a Function of Frequency	670
XIII	: Complex Dielectric Constant of Non-polar Solids	671

XIV : Dipolar Relaxation
 XV : Absorption of Energy and Dielectric Losses
 XVI : Effects of Dielectrics
 XVII : Important Requirements of Good Insulating Materials
 XVIII : Some Important Insulating Materials
 • Objective Questions
 • Short Questions
 • Review Questions
 • Problems

12. OPTICAL PROPERTIES OF SOLIDS

I : Introduction
 II : Classical Model-Drude Model
 III : Ionic Conduction
 IV : Optical Refractive Index and Relative Dielectric Constant
 V : Optical Absorption in Metals, Insulators and Semiconductors
 VI : Colour Centres
 VII : Excitons
 VIII : Luminescence
 IX : Maser and Laser
 X : Lasers
 XI : Application of Lasers
 XII : Physics of Optical Fibres
 • Questions
 • Problems and Solutions

13. NANOMATERIALS

I : Introduction
 II : Simple Arithmetics of Nanotechnology
 III : Some View Points from Nature
 IV : Materials Science and Nanotechnology
 V : Nanostructured Materials
 VI : Some Selected Properties of Nanomaterials
 VII : Semiconductor and Semiconductor Nanoparticles
 VIII : Importance of Nanotechnology

IX	: "Bottom-up" Science of Materials-nanoscience and Nanotechnology in Nanoscale	772
X	: Nanotechnology and Medicine	774
•	<i>Exercises</i>	775
14.	OTHER IMPORTANT TOPICS	780
I	: Composite Materials	780
	<i>Short Questions and Answers</i>	784
	<i>Review Questions</i>	785
II	: Non-conventional Energy Sources	785
III	: Insulating Materials and their Properties	794
IV	: Special Theory of Relativity	799
	<i>Exercises</i>	825
V	: The Origin of Quantum Theory and Blackbody Radiation	826
	<i>Important Tables</i>	837
•	<i>Answers to Objective Questions</i>	843
•	<i>Answers to Numerical Problems</i>	844
•	<i>Bibliography</i>	852
•	<i>Appendices</i>	853
	A. Special Tables	855
	B. Metric Prefixes	872
	C. Derived SI Units	873
	D. Why SI Units?	873
	E. Some Useful Differentials and Integrals	873
	F-5	875
•	<i>Index</i>	879
