<b>Preface to the Third Edition</b>	<b>vii</b>
<b>Preface to the Second Edition</b>	<b>ix</b>
<b>Preface to the First Edition</b>	<b>xi</b>
<b>Chapter 1: Basis of Classical Statistical Mechanics</b>	<b>1—19</b>
1.1 Introduction	1
✓ 1.2 Phase Space	2
✓ 1.3 Ensemble	4
✓ 1.4 Ensemble Average	6
✓ 1.5 Liouville Theorem	8
1.6 Conservation of Extension in Phase	11
1.7 Equation of Motion and Liouville Theorem	12
1.8 Equal a Priori Probability	13
1.9 Statistical Equilibrium	14
1.10 Microcanonical Ensemble	15
1.11 Ideal Gas	17
Problems	18
<b>Chapter 2: Quantum Picture</b>	<b>20—41</b>
✓ 2.1 Microcanonical Ensemble	20
2.2 Quantization of Phase Space	22
2.3 Basic Postulates	24
2.4 Classical Limit	28
2.5 Symmetry of Wave Functions	29
2.6 Effect of Symmetry on Counting	31

2.7	Various Distributions using Microcanonical Ensemble (Ideal Gases) 34	
2.8	Density Matrix 37	
	Problems 40	
<b>Chapter 3:</b>	<b>Statistical Mechanics and Thermodynamics</b>	<b>42-69</b>
3.1	Entropy 42	
3.2	Equilibrium Conditions 48	
3.3	Quasistatic Processes 51	
3.4	Entropy of an Ideal Boltzmann Gas using the Microcanonical Ensemble 53	
3.5	Gibbs Paradox 55	
3.6	Sackur-Tetrode Equation 57	
3.7	Entropy and Probability 59	
3.8	Probability Distribution and Entropy of a Two Level System 59	
3.9	Entropy and Information Theory 64	
	Problems 67	
<b>Chapter 4:</b>	<b>Canonical and Grand Canonical Ensembles</b>	<b>70-102</b>
4.1	Canonical Ensemble 70	
4.2	Entropy of a System in Contact with a Heat Reservoir 74	
4.3	Ideal Gas in Canonical Ensemble 76	
4.4	Maxwell Velocity Distribution 78	
4.5	Equipartition of Energy 79	
4.6	Grand Canonical Ensemble 80	
4.7	Ideal Gas in Grand Canonical Ensemble 83	
4.8	Comparison of Various Ensembles 86	
4.9	Quantum Distributions using Other Ensembles 86	
4.10	Third Law of Thermodynamics 92	
4.11	Photons 92	
4.12	Einstein's Derivation of Planck's Law: Maser and Laser 95	
4.13	Equation of State for Ideal Quantum Gases 98	
	Problems 100	
<b>Chapter 5:</b>	<b>Partition Function</b>	<b>103-132</b>
5.1	Canonical Partition Function 103	
5.2	Molecular Partition Functions 104	
5.3	Translational Partition Function 106	
5.4	Rotational Partition Function 107	

- 5.5 Vibrational Partition Function 109
- 5.6 Electronic and Nuclear Partition Functions 111
- 5.7 Application of Rotational Partition Function 111
- 5.8 Homonuclear Molecules and Nuclear Spin 113
- 5.9 Application of Vibrational Partition Function to Solids 117
- 5.10 Vapour Pressure 121
- 5.11 Chemical Equilibrium 122
- 5.12 Real Gas 126
- Problems* 131

**Chapter 6: Ideal Bose-Einstein Gas** **133–164**

- 6.1 Bose-Einstein Distribution 133
- 6.2 Bose-Einstein Condensation 135
- 6.3 Thermodynamic Properties of an Ideal Bose-Einstein Gas 138
- 6.4 Liquid Helium 142
- 6.5 Two-fluid Model for Liquid Helium II 144
- 6.6 Landau Spectrum of Phonons and Rotons 151
- 6.7  $^3\text{He}$ - $^4\text{He}$  Mixtures 156
- 6.8 Superfluid Phases of  $^3\text{He}$  159
- Problems* 163

**Chapter 7: Ideal Fermi-Dirac Gas** **165–185**

- 7.1 Fermi-Dirac Distribution 165
- 7.2 Degeneracy 168
- 7.3 Electrons in Metals 172
- 7.4 Thermionic Emission 173
- 7.5 Magnetic Susceptibility of Free Electrons 174
- 7.6 White Dwarfs 175
- 7.7 Nuclear Matter 178
- 7.8 Super Conductivity 178
- Problems* 184

**Chapter 8: Semiconductor Statistics** **186–200**

- 8.1 Statistical Equilibrium of Free Electrons in Semiconductors 186
- 8.2 Nondegenerate Case 188
- 8.3 Impurity Semiconductors 191
- 8.4 Degenerate Semiconductors 193

8.5 Occupation of Donor Levels	194
8.6 Electrostatic Properties of $p$ - $n$ Junctions	196
<i>Problems</i>	199
<b>Chapter 9: Non-Equilibrium States</b>	<b>201–222</b>
9.1 Boltzmann Transport Equation	201
9.2 Particle Diffusion	202
9.3 Electrical Conductivity	205
9.4 Thermal Conductivity	206
9.5 Isothermal Hall Effect	208
9.6 Non-equilibrium Semiconductors	212
9.7 Electron-Hole Recombination	213
9.8 Quantum Hall Effect	216
<i>Problems</i>	221
<b>Chapter 10: Fluctuations</b>	<b>223–239</b>
10.1 Introduction	223
10.2 Mean-Square Deviation	223
10.3 Fluctuations in Ensembles	224
10.4 Concentration Fluctuations in Quantum Statistics	226
10.5 One-Dimensional Random Walk	227
10.6 Random Walk and Brownian Motion	230
10.7 Fourier Analysis of a Random Function	232
10.8 Electrical Noise (Nyquist Theorem)	236
<i>Problems</i>	236
<b>Chapter 11: Cooperative Phenomena: Ising Model</b>	<b>240–260</b>
11.1 Phase Transitions of the Second Kind	240
11.2 Ising Model	241
11.3 Bragg-Williams Approximation	242
11.4 Fowler-Guggenheim Approximation	244
11.5 Kirkwood Method	247
11.6 One-Dimensional Ising Model	250
11.7 Order-Disorder in Alloys	253
11.8 Structural Phase Change	255
11.9 Lattice Gas	257
<i>Problems</i>	258

<b>Chapter 12: Critical Phenomena</b>	<b>261–277</b>
12.1 Introduction	261
12.2 Critical Exponents	262
12.3 Scaling Hypothesis	265
12.4 Theory of Critical Phenomena	270
12.5 Mean Field Theory	272
12.6 The Renormalization-group Theory of Critical Phenomena	275
Problems	277
<b>Chapter 13: Irreversible Thermodynamics</b>	<b>278–288</b>
13.1 Irreversible Processes	278
13.2 Entropy Production	280
13.3 Linear Response Phenomenology	281
13.4 Onsager's Reciprocal Relations	282
13.5 Thermoelectric Phenomena	284
13.6 Peltier Effect	285
13.7 Seebeck Effect	286
13.8 Thomson Effect	286
13.9 Systems Far from Equilibrium	288
<b>Appendices</b>	<b>289–299</b>
1. Probability	289
2. Stirling Approximation	292
3. Lagrange Method	293
4. Mathematical Results	294
5. Volume of a Hypersphere	297
6. Useful Functions	298
<b>Units</b>	<b>300–301</b>
<b>Bibliography</b>	<b>302</b>
