Preface ix

## PART I MANAGEMENT AND SYSTEMS

- 1 The Meaning and Role of Management Information Systems 2**  
*What Is a Management Information System? / Note on Decision Support Systems / What Is the Systems Approach? / The Systems View of Business / MIS Organization Within the Company / Summary: The Manager of Tomorrow*
- 2 Management, Organizational Theory, and the Systems Approach 22**  
*Development of Organizational Theory / Management and Organizational Behavior / Management, Information, and the Systems Approach / Summary*
- 3 What the Manager Should Know About Computer Systems 84**  
*Data Processing and the Computer / Operation of a Manual Information System / Components of a Computer System / Conversion of Manual to Computer-Based Systems / The Data Bank Concept / Types of Computer-Based Applications / Summary*
- 4 Database Management 134**  
*The Business Setting / Enter: The Computer / Objectives of a DBMS / Database Technical Overview / Management Responsibility / Summary*
- 5 Information Systems for Decision Making 164**  
*Evolution of an Information System / Basic Information Systems / Decision Making and MIS / MIS as a Technique for Making Programmed Decisions / Decision-Assisting Information Systems / Summary*

## PART II PLANNING FOR, DESIGNING, AND IMPLEMENTING THE MIS

- 6 Strategic and Project Planning for MIS 210**  
*General Business Planning / Appropriate MIS Response / MIS Planning: General / MIS Planning: Details / Summary*
- 7 Conceptual System Design 234**  
*Define the Problems / Set System Objectives / Establish System Constraints / Determine Information Needs / Determine Information Sources / Develop Alternative Conceptual Designs and Select One / Document the System Concept / Prepare the Conceptual Design Report / Summary*
- 8 Detailed System Design 264**  
*Inform and Involve the Organization / Aim of Detailed Design / Project Management of MIS Detailed Design / Identify Dominant and Trade-off Criteria / Define the Subsystems / Sketch the Detailed Operating Subsystems and Information Flows / Determine the Degree of Automation of Each Operation / Inform and Involve the Organization Again / Inputs, Outputs, and Processing / Early System Testing / Software, Hardware, and Tools / Propose an Organization to Operate the System / Document the Detailed Design / Revisit the Manager-User / Summary*
- 9 Implementation, Evaluation, and Maintenance of the MIS 292**  
*Plan the Implementation / Acquire Floor Space and Plan Space Layouts / Organize for Implementation / Develop Procedures for Implementation / Train the Operating Personnel / Computer-Related Acquisitions / Develop Forms for Data Collection and Information Dissemination / Develop the Files / Test the System / Cutover / Document the System / Evaluate the MIS / Control and Maintain the System / Summary*
- 10 Pitfalls in MIS Development 322**  
*Fundamental Weaknesses / Soft Spots in Planning / Design Problems / Implementation: The Tar Pit / Summary*

## PART III ADVANCED CONCEPTS

- 11 Systems Concepts and Control 348**  
*Systems Classifications / Some System Concepts / Control: The Key System Concept / The Business Organization as a System / Control and System Design / Summary*

**12 Management Science and Systems Modeling for MIS 382**

*What Is Management Science? / What Are Models? / Kinds of Models / Use of Models for Analysis of Systems Characteristics / Simulation / Construction of Models / Summary*

**PART IV  
CASE STUDIES**

**Case 1 International Medical Instruments, Inc. 409**

**Case 2 Development of an MIS for Field Office Managers of the  
Northwestern Insurance Company 438**

**Case 3 IMI Staff Assignment 447**

**Case 4 Johnson Enterprises 452**

**Index 457**
