Preface to the Second Edition

vii

Preface to the First Edition

ix

1. General Introduction to Electromagnetic Spectrum and Molecular Spectroscopy

1

- 1.1 Spectroscopy, Spectrometry and the Spectrum 1
- 1.2 Nature of Electromagnetic Radiation and Electromagnetic Spectrum 1
- 1.3 Absorption of Electromagnetic Radiation by Organic Molecules 3
- 1.4 Types of Molecular Energies 4
- 1.5 Types of Molecular Spectroscopy 6

2. Infrared Spectroscopy

8

- 2.1 Introduction 8
- 2.2 Basic Theory and Instrumentation 8
- 2.3 Important Useful Terms Concerning Infrared Spectroscopy 18
- 2.4 Frequency of Vibration of a Diatomic Molecule and its Variation with Force Constant and Relative Masses of the Bonded Atoms 25
- 2.5 Frequency Shifts by Change of Phase and Solvents 27
- 2.6 Spectral Features of Major Functional Groups and Interpretation of Infrared Spectra of Some Representative Compounds 28
- 2.7 Applications of Infrared Spectroscopy 95
 - Spectral Sample and Study Problems 105

3. Ultraviolet Spectroscopy

119

- 3.1 Basic Concepts and Instrumentation 119
- 3.2 Factors Affecting the Position of UV Bands 133
- 3.3 Characteristic Absorption of Organic Compounds 135
- 3.4 Applications of UV Spectroscopy to Problems in Organic Chemistry 166
 - Spectral Sample and Study Problems 175

4. Nuclear Magnetic Resonance Spectroscopy

187

- 4.1 Introduction 187

- 4.2 Spin-active Nuclei Behave as Spinning Nuclear Magnets 188
- 4.3 Orientation of Spinning Nuclear Magnets in a Uniform Magnetic Field and Energy Description in NMR Phenomenon 189
- 4.4 Phenomenon of Energy Absorption (Resonance) and Relaxation 189
- 4.5 Continuous Wave (CW) NMR Spectrometer 198
- 4.6 Chemical Shift, Chemical Shift Parameters and Internal Standards 203
- 4.7 Factors Affecting the Chemical Shifts 205
- 4.8 Equivalence and Non-equivalence of Protons 215
- 4.9 Electron Coupled Spin-spin Splitting Theory 225
- 4.10 Types of Spin-spin Couplings and Factors Affecting the Coupling Constants 241
- 4.11 Interpretation of NMR Spectra of Some Representative Compounds 258
- 4.12 Techniques for Simplification of Spectra 269
 - (a) Chemical Techniques
 - (b) Instrumental Techniques
- 4.13 FT-NMR Spectroscopy 289
- 4.14 Applications of Nuclear Magnetic Resonance Spectroscopy 296
- 4.15 Carbon-13 NMR Spectroscopy 307
- 4.16 Two-Dimensional NMR 315
 - Spectral Sample and Study Problems 326

5. Mass Spectrometry

340

- 5.1 Introduction 340
- 5.2 Basic Theory 341
- 5.3 Instrumentation—The Mass Spectrometer 341
- 5.4 Important Useful Terms Concerning Mass Spectrometry 358
- 5.5 General Modes of Fragmentation 364
- 5.6 Characteristic Features and Fragmentation Patterns of Various Classes of Compounds 377
- 5.7 Chromatography-Mass Spectrometry 440
- 5.8 Negative Ion Mass Spectrometry 446
- 5.9 Some Important Applications of Mass Spectrometry 457
 - Spectral Sample and Study Problems 464

5. Optical Rotatory Dispersion and Circular Dichroism

473

- 6.1 Introduction 473
- 6.2 Circular Birefringence and Circular Dichroism 475
- 6.3 Optical Rotatory Dispersion (ORD) 477
- 6.4 The Axial Helix Rule and Octant Rule 479
- 6.5 Applications of Octant Rule 482
 - Study Problems 485

7. Composite Spectral Problems

487

- 7.1 Aids to Structural Information 487
- 7.2 Application of Spectroscopic Techniques to Structural Elucidation 491
- 7.3 Composite Problems with Solutions (Set I) 494

-
- 7.4 Interpretation of UV, IR, PMR and Mass Spectra for the Identification of Organic Compounds (Set II) 504
- 7.4.1 Study problems for the interpretation of IR, PMR and Mass spectra for the identification of organic compounds (set III). 524
- 7.5 Unsolved spectral problems (Set IV) 534
- Index 543
